Downloaded from https://www.cambridge.org/core by IP address 54.70.40.11 on 16 Nov 2018 at 23:29:37. Subject to the Cambridge Core terms of use, available at https://www.cambridge.org/core/terms.
INSTRUCTIONS FOR AUTHORS

1. Original Articles which have not been published elsewhere are invited and should be sent to the Editors. Articles should not normally exceed 7,500 words. Audit articles must demonstrate that the 'audit cycle' has been completed. Articles concerning medico-legal matters are also welcome. Longer articles or theses will be considered for publication as Supplements but, in such instances, the costs of publication must be met by the author(s) or their employing authorities.

2. Review Articles, preferably not exceeding 3,000 words, will be considered but the authors are expected to be recognized authorities on the subject.

3. Historical articles of well known characters or events should provide some new information or interpretation: those from within a Hospital's own department highlighting a hitherto less well known contribution are also welcome.

4. Short reports where radiology, pathology or medical oncology have been critical in diagnosis or management will be published on a monthly or bimonthly basis under the headings Radiology, Pathology or Oncology in Focus. Such articles should not normally be longer than 4 pages of print (excluding the text and references). The text should normally be expected to be a co-author and will be expected to sign the letter covering the submitted paper.

5. Clinical Records (Case Reports) should be brief (as with short reports, no more than 4 pages of A4 text) and should be confined to single cases without precedent in the world literature or to cases which illustrate some entirely new facet in management or investigation. Reports of rare events are only welcome when they add to our understanding of a clinical issue.

6. All manuscripts are considered on the understanding that they have been submitted solely to this Journal and that, if accepted, submission elsewhere is not planned. The text should normally be expected to be a co-author and should also indicate their names. Authors should also individually indicate the part they have played in data collection, analysis or authorship. The principal investigator (who should normally be the first author) should also indicate that he or she is prepared to take total responsibility for the integrity of the content of the manuscript.

In the same letter the authors must list any potential or actual conflicts of interest: where none have occurred this should be clearly stated. Conflicts of interest include affiliations with, or financial involvement in, organizations or entities described in the manuscript and include grants, honoraria, fees or gifts related to the work as well as indirect financial support where equipment or drugs have been supplied.

8. Manuscripts must be typewritten in duplicate on one side of the paper only (A4 297 x 210 mm). Double spacing with wide margins (5 cm) should be used. The pages should be numbered at the top of each page. Begin each section on a new page in the following sequence: title page, abstract, text, acknowledgements, references, tables and legends. The following details should apply to each of these sections:

(a) Title Page—This should contain a succinct title for the paper and the names of the authors together with their principal higher degrees. Below this should be the details of the departments in which the authors work and the name of their affiliated institution(s). An address for correspondence and the name of each of the authors who is to receive this should also be typed at the foot of the title page; this will ultimately appear beneath the list of references.

(b) Abstract and Key Words—The abstract should not be longer than 150 words and should include a statement of the problem, the method of study, the results obtained and the conclusions drawn. A separate 'summary' section in the main manuscript is not permitted. Permissions to quote abstract should be those key words which can be used to index the article. Only the words appearing as Medical Subject Headings (MeSH) in the supplement to Index Medicus may ordinarily be used: in exceptional circumstances, and where no appropriate word(s) are listed, those dictated by common usage should be supplied.

(c) Text—The text should normally follow the common outlines, i.e., introduction, materials and methods, results and analysis, discussion, conclusion(s). The latter sections should clearly indicate how this work fits with the current body of world literature.

(d) Illustrations—Tables and charts should be adjuncts to the text and must not repeat material already presented. They should be numbered sequentially, with Roman numerals, and must be marked with a clear legend. Photographs should not exceed 80 mm in width and should be high quality black and white prints: reproduction of coloured prints will normally be unacceptable. Two sets of photographic illustrations, one with each copy of the manuscript, should be prepared. The figures should be clearly identified on the back with the figure number and the first authors name. Where any ambiguity might result the top edge should be identified with an arrow to aid orientation. Colour illustrations from papers are occasionally selected by the editor for use on the front cover of the journal at no cost to the authors. If appropriate a colour version of one photograph may be used: in exceptional circumstances, and where no appropriate word(s) are listed, those dictated by common usage should be supplied.

(e) Measurements—These must be in metric units with Systeme Internationale (SI) equivalents given in parentheses.

(f) References—The Harvard system should be used. Other systems are not permissible. In the list of references all authors should be included and references should be in alphabetical order (by name of first author). The following format should be used:

For papers the names of the authors, the year of publication, the title and the journal name in full should be given followed by the volume and page numbers, e.g., Green. C, Brown. D. (1951) Examination of the Ear. Diseases of the Ear Nose and Throat. 65: 33-38.

For single author books the style used should be Green, C. (1951) The tonsil problem. Headley Brothers Ltd., Ashford, Kent, pp 33-38.

For papers in multi author books with one or more editors the reference should include the title of the chapter and the names of the editors together with the number of the edition as in: Brown, D. (1951) Examination of the Ear. Diseases of the Ear Nose and Throat. 2nd Edition. Headley Brothers Ltd., Ashford, Kent, pp 33-38.

Within the body of the text references should be in parentheses and should cite the author(s) and the year of publication. A paper written by three or more authors should be abbreviated e.g., Green eta/., 1951.

The authors should personally verify the accuracy of every reference before submitting a paper for publication.

(g) Drugs—The proper names of drugs should be used. One reference to a proprietary name may be given if this is felt to be important to the study.

9. Submission of manuscripts—Manuscripts should be sent to the Editors, The Journal of Laryngology and Otology, 2 West Road, Guilford, Surrey GU1 2AU (Fax: +44(0)1483-458174). All authors should send a facsimile number where possible to speed communication. Material submitted on floppy disk or sent by e-mail is not accepted. Page proofs sent to authors should be corrected and returned within 5 working days. No extra material should be added to the manuscript at this stage. Orders for reprints must be made on the form provided at the time of returning the proofs.

10. Rejection of manuscripts—All manuscripts that are rejected will no longer be returned to the authors and those submitting papers should ensure that they retain at least one copy. The rejection will be manuscripts containing coloured illustrations where the illustrations only will normally be returned automatically by Surface Mail.

11. Subscriptions, advertising and business communications—Information concerning these matters can be obtained from The Editors, c/o The Journal of Laryngology and Otology, Headley Brothers, The Invicta Press, Ashford, Kent TN24 8BH.

New VOROSCOPE versatility

The Voroscope Clip-on Compleat - a new angle on illuminated magnification

The Voroscope Clip-on Compleat can be slipped onto your own operating spectacles or safety glasses, providing 12,000 lux intensity illumination, with a selection of x1.5, x1.75 or x2.25 magnification lenses.

New swivel feature allows the Voroscope Clip-on Compleat to be used in either the upright “convergent” position looking down ONTO the work field or in the eye-aligned “coaxial” position, better indicated for looking INTO narrow orifices as in nasal or auricular procedures.

Equally effective in theatre, clinic, consulting room or ward.

The Voroscope Illumination System on its own can be used with most styles of surgical loupes.

VOROSCOPE VEGA® Battery Charger provides an 80 minute recharge.

*VEGA is the brightest star in the constellation Lyra and fourth brightest in the entire universe.

Garth Jessamine Health Care, Unit 5, The Courtyard, Matthewsgreen Farm, Matthewsgreen Road, Wokingham, Berkshire RG41 1JX

New Techniques in ENT:
Made-to-order Instruments for APC and Electrosurgery

APC (Argon Plasma Coagulation) permits safe hemostasis and effective devitalization of pathologic tissues.
Specially developed instruments now make the advantages of APC – along with ERBE electrosurgical technology – available for ENT as well:
- Limited penetration depth with reduced risk of perforation
- Non-contact technology
- No vaporization, no carbonization
- Easy to use
- Improved postoperative wound healing

The nasal turbinates are reduced effectively and lastingly in **hyperplasia** (see Fig. 1).

APC permits non-contact, homogeneous and highly effective treatment of superficial lesions of the oral mucosa such as **granuloma** and **leucoplakia** (Fig. 2).

APC’s limited penetration depth offers maximum protection against perforation in treatment of **papillomatosis** (Fig. 3).

The tympanic membrane can be opened by the Microneedle 100 (Fig. 4) with pinpoint accuracy and precision in **otitis media**. And this with minimum necrosis of the incision margins.

*We will be glad to provide you with more information about other possibilities of application.*
