Selective lateral neck dissection for laryngeal cancer in clinically negative neck

Low velocity gunshot injuries to the temporal bone

Ten year audit of the management of cancers of the larynx and pharynx

A systematic approach to the interpretation of CT scans prior to endoscopic sinus surgery
Private Practice Software
From D.G.L. Information Technologies (UK) Ltd.

The UK’s best selling private practice software, just got better...

- Completely rewritten to take full advantage of Windows '95 & NT.
- New modular version provides a tailored, cost-effective solution whatever your budget or requirements.
- Major new features have been added that offer an unrivaled range of features and flexibility.
- Ready for Electronic Claims Processing and approved by major participating Insurers.
- Acclaimed for its ease of use, we have made the software even easier to use and tailor to your exact requirements.
- BEST OF ALL it is now available, FREE, on a 30-day, no-obligation trial basis.

Over 1300 Practice Manager Licences Sold To-date.

INSTRUCTIONS FOR AUTHORS

1. Original Articles which have not been published elsewhere are invited and should be sent to the Editors. Articles should not normally exceed 7,500 words. Audit articles must demonstrate that the ‘audit cycle’ has been completed. Articles concerning medico-legal matters are also welcome. Longer articles or theses will be considered for publication as Supplements but, in such instances, the costs of publication must be met by the authors or their employing authorities.

2. Review Articles, preferably not exceeding 3,000 words, will be considered but the authors are expected to be recognized authorities on the subject.

3. Historical articles of well known characters or events should provide some new information or interpretation: those from within a Hospital’s own department highlighting a hitherto less well known contribution are also welcome. Occasionally selected by the editor for use on the front cover of the journal at no cost to the authors.

4. Short reports where radiology, pathology or medical oncology have been critical in diagnosis or management will be published on a monthly or bimonthly basis under the headings Radiology, Pathology or Oncology in Focus. Such articles should not normally be longer than 4 pages of printed matter (excluding the reference list), and should be specifically directed to the Editor, giving the names of two people to whom the manuscript should be sent.

5. Clinical Reports (Case Reports) should be brief (as with short reports, no more than 4 pages of A4 text) and should be confined to single cases without precedent in the world literature or to cases which illustrate some entirely new facet in management or investigation.

6. Manuscripts are considered on the understanding that they have been submitted solely to this Journal and that, if accepted, submitters and/or their employing authorities should also indicate their wish to retain all copyright in the work. The author should personally verify the accuracy of every reference before submitting a paper for publication.

7. Full papers and Case Reports should conform to single space only and must not exceed 3,000 words. Ordinary journal style should be observed.

8. Manuscripts must be typewritten in duplicate on one side of the paper only (A4 297 x 210 mm). Double spacing with wide margins (5 cm) and 2.5 cm for the right margin and 2 cm for the top margin should be used. The pages should be numbered and must be marked with a clear legible margin. Where any ambiguity might result the top edge should be identified with an arrow to aid orientation. Colour illustrations from papers are occasionally selected by the editor for use on the front cover of the journal at no cost to the authors. If appropriate a colour version of one photograph which could be used to index the article. Only the words appearing as Medical Subject Headings (MeSH) in the supplement to Index Medicus may ordinarily be used: in exceptional circumstances, and when no appropriate words are listed, those dictated by common usage should be supplied.

9. No paper will be accepted without an abstract and appropriate key words. The text should normally follow the common outlines, i.e., introduction, materials and methods, results and analysis, discussion, conclusion(s).

10. Within the body of the text references should be in parentheses and should cite the author(s) and the year of publication. A paper written by two authors should be cited as: (N. Author 1, N. Author 2. 1987. The use of penicillin. J. Med. Assoc. 78: 335-340). In the list of references all authors should be included and references should be in alphabetical order (by name of first author). The following format should be used:

(a) Text—The text should normally follow the common outlines: introduction, materials and methods, results and analysis, discussion, conclusion(s).

(b) Abstract and Key Words—The abstract should be no longer than 150 words and should include a statement of the problem, the method of study, the results obtained and the conclusions drawn. A separate ‘summary’ section in the main manuscript is not permitted.

(c) Text—The text should be self-contained and should be clear on the basis of individual components, the division into sections is not mandatory. The text should be easy to follow and be clear on the basis of individual components, the division into sections is not mandatory. The text should be easy to follow and be clear on the basis of individual components, the division into sections is not mandatory. New
VOROSCOPE versatality

The Voroscope Clip-on Compleat - a new angle on illuminated magnification

The Voroscope Clip-on Compleat can be slipped onto your own operating spectacles or safety glasses, providing 12,000 lux intensity illumination, with a selection of x1.5, x1.75 or x2.25 magnification lenses.

New swivel feature allows the Voroscope Clip-on Compleat to be used in either the upright "convergent" position looking down ONTO the work field or in the eye-aligned "coaxial" position, better indicated for looking INTO narrow orifices as in nasal or aural procedures.

Equally effective in theatre, clinic, consulting room or ward.

The Voroscope Illumination System on its own can be used with most styles of surgical loupes.

VOROSCOPE VEGA® Battery Charger provides a 80 minute recharge.

*VEGA is the brightest star in the constellation Lynx and fourth brightest in the online universe.

New Techniques in ENT: Made-to-order Instruments for APC and Electrosurgery

APC (Argon Plasma Coagulation) permits safe hemostasis and effective devitalization of pathologic tissues. Specially developed instruments now make the advantages of APC – along with ERBE electrosurgical technology – available for ENT as well:

- Limited penetration depth with reduced risk of perforation
- Non-contact technology
- No vaporization, no carbonization
- Easy to use
- Improved postoperative wound healing

The nasal turbinates are reduced effectively and lastingly in hyperplasia (see Fig. 1).

APC permits non-contact, homogeneous and highly effective treatment of superficial lesions of the oral mucosa such as granuloma and leucoplakia (Fig. 2).

APC's limited penetration depth offers maximum protection against perforation in treatment of papillomatosis (Fig. 3).

The tympanic membrane can be opened by the Microneedle 100 (Fig. 4) with pinpoint accuracy and precision in otitis media. And this with minimum necrosis of the incision margins.

We will be glad to provide you with more information about other possibilities of application.
