

CLAY MINERALS BULLETIN

DECEMBER, 1955

VOL. 2, No. 13

EDITORIAL

The present number of *Clay Minerals Bulletin* contains the four papers on d.t.a. presented at the November meeting 1954. The discussion on these papers, although separated, was held after all four had been read and therefore in some cases, remarks in the printed discussion may apply to several papers.

The present number contains on the inside rear cover the requirements of manuscripts submitted for publication in *Clay Minerals Bulletin*. Authors are requested to read this carefully. Any further information required will be supplied on application to the Hon. Editor.

Attention is drawn to the final article (Page 294); "Report of the Clay Minerals group sub-committee on nomenclature of clay minerals." In this will be found a useful working classification of the various clay minerals. It should be remembered that the classification adopted does not form a set of rules, but represents a series of proposals which, if adopted, will greatly aid future references to clay minerals.
