The Journal of the Institute of Navigation

The *Journal* is published quarterly by the Institute and is edited by M. W. RICHEY. It contains original papers contributing to the science of navigation, including those presented at meetings of the Institute together with the ensuing discussion. In addition the *Journal* includes a record of current navigational work, reviews of important books, and other matters of concern to those interested in navigation. The views expressed in the *Journal* are not necessarily those of the Institute, or of any organization or department to which the authors may belong. In the case of some papers Crown Copyright may be reserved.

The *Journal* is issued free to all members of the Institute. It is sold to the public at thirty shillings per copy or, by subscription, at one hundred and twenty-five shillings per annum (post free) and may be obtained through all booksellers and John Murray (Publishers) Ltd., 50 Albemarle Street, London W1.

Contributions, which are welcomed from both members and non-members, should be addressed to the Editor.

Enquiries for advertising space should be addressed to the Institute offices.

The postal address of the Institute is:

MARCONI DOPPLER OPERATES INTERNATIONALLY

Aircraft of seventeen intercontinental airlines navigate the air routes of the world with Marconi AD560 Doppler, the most reliable and accurate civil Doppler navigator in service today

Marconi AD560 is fitted to the jet fleets of:

- BOAC
- Qantas
- Air India
- South African Airways
- TAP
- Air New Zealand
- Malaysia-Singapore Airlines
- Iraqi Airways
- East African Airways
- Ghana Airways
- Caledonian Airways
- Kuwait Airways

and has been selected for the prototypes of the SST Concorde

Europe's largest manufacturer of airadio equipment

Oil surrounds you – wherever you are. Your drip-dry shirts, your plastic macs, your waterproof caps, your composite soles on your composite shoes, buttons, ties and zips; oil surrounds you. BP scientists have learnt

how to change oil into the raw materials for all these products. And thousands of others.

BP serves a world on the move.

You are surrounded by oil!

INSTITUTE PUBLICATIONS

The Use of Radar at Sea

A Handbook on Marine Radar. (New edition in preparation.)

Observational Errors

An elementary account of the ideas behind the statistical theory of errors, by E. W. Anderson & J. B. Parker. (John Murray, 5s.)

The Geometrical Seaman

An illustrated work on early navigational instruments, by E. G. R. Taylor & M. W. Richey. (Hollis & Carter, 30s.)

The Mathematical Practitioners of Tudor and Stuart England

by E. G. R. Taylor. (Cambridge University Press, 70s. Members 55s. plus 2s. postage.)

An account of the ideas, instruments and methods in navigation and surveying between 1485 and 1715 with lists of the mathematical practitioners with biographical notes and details of their work.

The Mathematical Practitioners of Hanoverian England

by E. G. R. Taylor. (Cambridge University Press, 84s. Members 63s. plus 2s. postage.)

This book, a sequel to the earlier volume, takes the story up to 1840, by which time the independent mathematical practitioner had virtually disappeared, absorbed into the large firm or organization as a consequence of industrial and social change.

The Separation of Traffic at Sea

A Working Group Report (5s.)

from The Institute of Navigation
1 Kensington Gore, London SW7

**we do
the most
unmentionable
things!**

The accent throughout Smiths Industries Aviation Division is heavily on future flight requirements—confidential of course. But design secrets at Smiths Industries are frequently revealed as technological triumphs. For their research and development programmes they spend £2½ million annually. Of the 5,000 personnel,

a quarter work solely on experimental projects in flight control, automatic landing, fuel gauging, and general instrumentation. Over 300 airlines and air forces, all users of Smiths aviation equipment, constantly look to Smiths Industries Aviation Division for leadership in design trends.

Reviews of Recent Books

ROYAL GEOGRAPHICAL SOCIETY REPRODUCTIONS OF EARLY MAPS—VII

Early Maps of the British Isles

A.D. 1000 — A.D. 1579

Collotype facsimiles of twenty manuscript and printed maps
with an Introduction and Notes by

G. R. Crone, M.A.

Librarian and Map Curator, R.G.S.

15 Collotype plates in a portfolio, 21" × 16½".

The twenty maps, manuscript and printed, have been chosen to illustrate the development of the map of the British Isles from the Cotton world map of circa A.D. 1000 to the general map in Christopher Saxton's county atlas of England and Wales, A.D. 1579. They thus extend from the earliest rudimentary manuscripts to the decorative printed maps of the Tudor period. Among the MSS. are several not hitherto generally available which have been included through the cooperation of the Trustees of the British Museum.

Price 35s. plus postage: Inland 4/6, Overseas according to destination.

THE INTERNATIONAL HYDROGRAPHIC BUREAU

Avenue Président J. F. Kennedy, MONACO

publishes

**twice a year, in January and July,
an English and a French edition of**

THE INTERNATIONAL HYDROGRAPHIC REVIEW

This publication contains articles of topical interest on hydrography, hydrographic surveying and related techniques.

Each volume contains an average of 160 pages, 18 × 27 cm., and numerous illustrations.

Price per number \$6 (U.S.), post free.

Orders should be sent direct to the Bureau's Headquarters in Monaco, but payments can be made to the Bureau's account at Barclays Bank Ltd., Chief Foreign Branch, 152-156 Upper Thames Street, London, E.C.3.

A reduction of 30% on the price quoted is allowed to booksellers. The same reduction is granted to government offices and to naval or merchant marine officers of the Bureau's Member States, provided the order is sent direct to the Bureau.

Mk.6A DISPLAY HEAD

The only thing this pictorial display lacks is serious competition.

The Mk. 6A Display Head represents Decca's 18 years of experience in pictorial display systems. In those 18 years Decca systems have logged over 3 million flying hours. The Decca/Omnitrac system, of which this display head is part, accepts VOR/DME, Doppler and Inertial as well as Hyperbolic inputs, all processed and fed to the display head by the Omnitrac computer. The system also provides bearing and distance and ETA read out to any selected point, autopilot coupling, L/R indication and it also solves the problem of circling approaches. Everything, first to last, is automatic and so reduces flight deck workload. Decca/Omnitrac is the only completely 'fail-safe' closed loop system and out-performs all rivals.
