Contents

PART 1 MARCH 1990

Trees and amenable equivalence relations  S Adams  1
Monotone recurrence relations, their Birkhoff orbits and topological entropy  S B Angenent  15
Convergence for moving averages  A Bellow, R Jones and J Rosenblatt  43
Quasi-transversal saddle-node bifurcation on surfaces  J Beloqui and M J Pacifico  63
Regular isomorphism of Markov chains is almost topological  M Boyle and S Tuncel  89
Suspensions of topological transformation groups  D B Ellis  101
Stability of m-equivalence to the weak Pinsker property  A Fieldsteel and D J Rudolph  119
Attractors in cellular automata  M Hurley  131
On the almost everywhere convergence of the ergodic averages  F J Martín-Reyes and A De La Torre  141
The growth rate of trajectories of a quadratic differential  H Masur  151
An explosion point for the set of endpoints of the Julia set of $\lambda \exp(z)$  J C Mayer  177
Generic bifurcations of the twist coefficient  R Moeckel  185
On the topological stable rank of certain transformation group $C^*$-algebras  I F Putnam  197

PART 2 JUNE 1990

Invariant curves around a parabolic fixed point at infinity  D Aharonov and U Elias  209
Parabolic fixed points, invariant curves and action-angle variables  D Aharonov and U Elias  231
Marker automorphisms of the one-sided $d$-shift  J Ashley  247
Minimal geodesics  V Bangert  263
Homotopical stability of pseudo-Anosov diffeomorphisms  A Fathi  287
The splitting of separatrices for analytic diffeomorphisms  E Fontich and C Simó  295
Invariant manifolds for near identity differentiable maps and splitting of separatrices  E Fontich and C Simó  319
Meromorphic extension of the zeta function for Axiom A flows  N T A Haydn  347
Approximations of continuous functions by squares  P D Humke and M Laczkovich  361
Contents

Approximate solutions of cohomological equations associated with some Anosov flows S Katok 367
An algorithm for sofic shift equivalence K H Kim and F W Roush 381
×2 and ×3 invariant measures and entropy D J Rudolph 395
Book Review 407

PART 3 SEPTEMBER 1990

Minimal convergence on \(L^p\) spaces I Assani 411
Automorphisms of one-sided subshifts of finite type M Boyle, J Franks and B Kitchens 421
Connecting ergodicity and dimension in dynamical systems C D Cutler 451
A topological version of a theorem of Veech and almost simple flows E Glasner 463
Produits de matrices aléatoires et applications aux propriétés géométriques des sous-groupes du group linéaire Y Guivarc'h 483
Un théorème de disjonction de systèmes dynamiques et une généralisation du théorème ergodique de Wiener-Wintner E Lesigne 513
The number of limit cycles of polynomial deformations of a Hamiltonian vector field P Mardešić 523
On Cherry flows M. Martens, S Van Strien, W De Melo and P Mendes 531
Open index pairs, the fixed point index and rationality of zeta functions M Mrozek 555
The \(C^*\)-algebras of Morse-Smale flows on two-manifolds X Wang 565
Differentiability with respect to parameters of average values in probabilistic contracting dynamical systems W D Withers 599
Book Review 611

PART 4 DECEMBER 1990

Bounded-to-1 factors of an almost aperiodic shift of finite type are 1-to-1 almost everywhere factors also J Ashley 615
The box and Hausdorff dimension of self-affine sets T Bedford and M Urbanski 627
Maximal absolutely continuous invariant measures for piecewise linear Markov transformations W Byers, P Gora and A Boyarsky 645
Anosov flows with smooth foliations and rigidity of geodesic flows on three-dimensional manifolds of negative curvature R Feres and A Katok 657
Contents

Ergodic aspects of cellular automata  M Hurley  671
Bernoulli shifts of the same entropy are finitarily and unilaterally isomorphic  A del Junco  687
Exponents, attractors and Hopf decompositions for interval maps  G Keller  717
A map with topological minimal self-joinings in the sense of del Junco  J L King  745
Compact subgroups in the centralizer of natural factors of an ergodic group extension of a rotation determine all factors  M Lemanczyk and M K Mentzen  763
KAM theory for particles in periodic potentials  M Levi  777
Correction to ‘Equivariant spectral composition for flows with a Z-action’  L Mosher  787
Lorenz attractors through Sil’nikov-type bifurcation. Part I  M R. Rychlik  793
The entropy of polynomial diffeomorphisms of $C^2$  J Smillie  823
Index to Volume 10  829
Index to Volumes 1–10  831
INSTRUCTIONS TO AUTHORS

1 Submission of typescripts
Two copies of the manuscript should be submitted to one of the four Executive Editors (addresses on outside front cover) The editor will acknowledge receipt of the manuscripts It is important that authors inform the editor of any changes of address whilst their paper is under consideration

2 Typescript
Papers should be typed, double-spaced, on one side only and with generous margins The pages must be numbered
The first page should give the title, the author’s name and institution, and a short abstract intelligible to mathematicians
The title, while brief, must be informative (e.g. A new proof of the ergodic theorem, whereas Some applications of a theorem of Birkhoff would be useless)

3 Notation
It is important that mathematical expressions are clear to a printer (who is not a mathematician) For instance, $n_k$ ($n$ sub $k$) is common usage, but avoid if possible using $c$ sub $n$ sub $k$. Fractions are generally best expressed by a solidus Complicated exponentials like
$$\exp \{ z^2 \sin \theta / (1 + y^2) \}$$
should be shown in this and no other way
In the typescript, italics, small capitals and capitals are specified by single, double and triple underlining Bold-faced type is shown by wavy underlining
It helps if displayed, equations or statements which will be quoted later are numbered in order on the right of their line They can then be referred to by, for example, ‘from (7)’
The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as $\alpha$, $O$, $o$, $0$, $x$, $X$, $x$, $\phi$, $\Phi$, $\emptyset$, $l$, $1$, $e$, $\epsilon$, $\kappa$, $k$.
There is no need to underline Greek or script letters provided these are clearly typed Any special symbols should be explained on a separate sheet of directions for the printer
If an author wishes to mark the end of the proof of a theorem, the sign $\square$ may be used
Footnotes should be avoided

4 Diagrams
Figures and drawings should be on separate sheets in black ink Photocopies are acceptable only if they are as clear as the originals Symbols, legends and captions should be given on a transparent overlay Each text figure must be numbered as Figure 1, Figure 2, and its intended position clearly indicated in the typescript The author’s name in pencil must be on all separate sheets of diagrams
A figure is expensive to reproduce and should be included only when the subject matter demands it, or when it greatly clarifies the exposition
The publisher recognizes that some authors do not have the facilities for producing drawings of a sufficiently high standard to be reproduced directly and is therefore willing to have such diagrams re-drawn, provided that they are clear

5 Tables
Tables should be numbered (above the table) and set out on separate sheets Indicate the position of each in the text as for figures

6 References
References should be collected at the end of the paper numbered in alphabetical order of the authors’ names A reference to a book should give the title, in italics, and then in roman type the publisher’s name and the place and year of publication,
A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper Titles should be abbreviated as in Mathematical Reviews

7 Proofs
Authors receive one set of proofs for correction If excessive alterations to the original manuscript are requested after the paper has been typeset, the author will be charged the cost of resetting For papers with more than one author the proofs are sent to the first named author unless the editor receives other instructions It is important that proofs are corrected and returned promptly

8 Reprints
There are 100 reprints, free of charge, for each paper For papers with several authors these reprints are divided between the authors There are no page charges
CONTENTS

Ashley, J. Bounded-to-1 factors of an almost aperiodic shift of finite type are 1-to-1 almost everywhere factors also 615

Bedford, T. and Urbanski, M. The box and Hausdorff dimension of self-affine sets 627

Byers, W., Gora, P. and Boyarsky, A. Maximal absolutely continuous invariant measures for piecewise linear Markov transformations 645

Feres, R. and Katok, A. Anosov flows with smooth foliations and rigidity of geodesic flows on three-dimensional manifolds of negative curvature 657

Hurley, M. Ergodic aspects of cellular automata 671

del Junco, A. Bernoulli shifts of the same entropy are finitarily and unilaterally isomorphic 687

Keller, G. Exponents, attractors and Hopf decompositions for interval maps 717

King, J. L. A map with topological minimal self-joinings in the sense of del Junco 745

Lemanczyk, M. and Mentzen, M. K. Compact subgroups in the centralizer of natural factors of an ergodic group extension of a rotation determine all factors 763

Levi, M. KAM theory for particles in periodic potentials 777

Mosher, L. Correction to ‘Equivariant spectral composition for flows with a $\mathbb{Z}$-action’ 787

Rychlik, M. R. Lorenz attractors through Sil’nikov-type bifurcation. Part I 793

Smillie, J. The entropy of polynomial diffeomorphisms of $\mathbb{C}^2$ 823
