

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by *Robotica* should be submitted electronically, using the Manuscript Central System, via <http://mc.manuscriptcentral.com/cup/robotica>. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other file types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (gregc@jhu.edu) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However,

most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972);
C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume **37** Part **12** December **2019**

SPECIAL ISSUE ON WEARABLE ROBOTICS: DYNAMICS, CONTROL AND APPLICATIONS

Editorial

- Qining Wang, Nicola Vitiello, Samer Mohammed, and Sunil Agrawal** 2011
- Design and Evaluation of a Soft Assistive Lower Limb Exoskeleton
Christian Di Natali, Tommaso Poliero, Matteo Sposito, Eveline Graf, Christoph Bauer, Carole Pauli, Eliza Bottenberg, Adam De Eyto, Leonard O'Sullivan, Andrés F. Hidalgo, Daniel Scherly, Konrad S. Stadler, Darwin G. Caldwell and Jesús Ortiz 2014
- Design and Experimental Evaluation of Wearable Lower Extremity Exoskeleton with Gait Self-adaptivity
Wenkang Wang, Liancun Zhang, Kangjian Cai, Zhiheng Wang, Bainan Zhang and Qiang Huang 2035
- A Novel Generation of Ergonomic Upper-Limb Wearable Robots: Design Challenges and Solutions
Giorgia Ercolini, Emilio Trigili, Andrea Baldoni, Simona Crea and Nicola Vitiello 2056
- Kinematic Design Optimization of an Eight Degree-of-Freedom Upper-Limb Exoskeleton
Amin Zeiaee, Rana Soltani-Zarrin, Reza Langari and Reza Tafreshi 2073
- Optimizing Control of Passive Gait Training Exoskeleton Driven by Pneumatic Muscles Using Switch-Mode Firefly Algorithm
Yu Cao, Jian Huang, Zhangbo Huang, Xikai Tu and Samer Mohammed 2087
- Articular Geometry Reconstruction for Knee Joint with a Wearable Compliant Device
Jiajie Guo, Zihang Wang, Jianyong Fu and Kok-Meng Lee 2104
- Effectiveness of a Robot-Mediated Strategy While Counteracting Multidirectional Slippages
F. Aprigliano, V. Monaco, P. Tropea, D. Martelli, N. Vitiello and S. Micera 2119
- Human Evaluation of Wheelchair Robot for Active Postural Support (WRAPS)
Chawin Ophaswongse, Rosemarie C. Murray, Victor Santamaria, Qining Wang and Sunil K. Agrawal 2132
- Adaptive Proxy-Based Controller of an Active Ankle Foot Orthosis to Assist Lower Limb Movements of Paretic Patients
Weiguang Huo, Victor Arnez-Paniagua, Guangzheng Ding, Yacine Amirat and Samer Mohammed 2147
- A Hierarchical Safety Control Strategy for Exoskeleton Robot Based on Maximum Correntropy Kalman Filter and Bounding Box
Yang Mo, Zhenzi Song, Hui Li and Zhihong Jiang 2165
- Comparison of Sprinting With and Without Running-Specific Prostheses Using Optimal Control Techniques
Anna Lena Emonds, Johannes Funken, Wolfgang Potthast and Katja Mombaur 2176
- IMU-Based Gait Phase Recognition for Stroke Survivors
Yu Lou, Rongli Wang, Jingeng Mai, Ninghua Wang and Qining Wang 2195
- ACE-Ankle: A Novel Sensorized RCM (Remote-Center-of-Motion) Ankle Mechanism for Military Purpose Exoskeleton
Man Bok Hong, Gwang Tae Kim and Yeo Hun Yoon 2209
