TRANSMISSION

The Bristol Type 171 Sycamore Helicopter uses LAYRUB as the main drive between engine and rotor.

Layrub couplings use rubber trunnion blocks as the main driving elements giving a fully cushioned drive. As there are no metal to metal contacts, no lubrication is required, therefore little or no maintenance.

Other well known British aircraft on which Layrub is used either as auxiliary or main drive include Bristol Type 173 Helicopter and Bristol Britannia.

A post card will see full technical data on its way to you.

THE PRESIDENT ELECT

THE RT HON LORD BRABAZON OF TARA

GBE MC PC Hon FR Ae S

The Executive Council has the honour to announce that The Rt Hon Lord Brabazon of Tara GBE MC PC Hon FR Ae S has accepted the Association's invitation to take office as President for the year 1956/57.

Lord Brabazon has always taken an interest in rotary wing aircraft development and during the thirties carried out experiments in the application of a rotor to a small sailing yacht. A pioneer of military flying he is the holder of Aviator's Certificate No. 1.

Lord Brabazon is Chairman of the Air Registration Board, and President of the Royal Aero Club. He is a Past President of the Federation Aeronautique Internationale and a Past President of the Royal Aeronautical Society, and also Past Chairman of the Brabazon Committee. Lord Brabazon is also President of the Royal Institution.

OBJECTS OF THE ASSOCIATION

The objects of the Association are to collect compile and disseminate information of a technical and semi technical nature pertaining to Helicopters and all other types of Rotating Wing Aircraft. The Association aims to work in close co operation with existing Aeronautical Bodies on matters affecting its objects and it may act as an Advisory Body in the promotion of legislation calculated to be of benefit to the development of Rotating Wing Aircraft
