# **We Are What We Are. The Infection Control Company**

There are two ways to control infection. One is to destroy microorganisms before they cause harm. The other is to keep them away from places where they may cause infection. At SURGIKOS we make products that do both.

You know our brands: BARRIER\* Packs and Apparel, CIDEX\* Solutions and MICRO-TOUCH\* Gloves to name a few. Now you know the company behind them. Infection control is all we do and all we have ever done.

From the SURGIKOS Permanent Art Collection. Artist Steve Pietzch's interpretation of *Staphylococcus aureus* in newborn nurseries. This original art was featured in ASEPSIS The Infection Control Forum Volume 8, Number 2, Second Quarter 1986.
