**EDITORIAL ASSISTANTS**

Natural Language Engineering meets the needs of professionals and researchers working in all areas of automatic language processing, whether from the perspective of theoretical or corpus linguistics, translation, lexicography, computer science or engineering. Its aim is to bridge the gap between traditional computational linguistics research and the implementation of practical applications with potential real-world use. As well as publishing original research articles on a broad range of topics - from text analysis, machine translation, information retrieval, speech processing and generation to integrated systems and multi-modal interfaces - it also publishes special issues on specific natural language processing methods, tasks or applications. The journal welcomes survey papers describing the state of the art of a specific topic. The Journal of Natural Language Engineering also publishes the popular Industry Watch and Emerging Trends columns as well as book reviews.

ARTICLES

Neural architectures for open-type relation argument extraction
Benjamin Roth, Costanza Conforti, Nina Porey, Sanjeev Kumar Karn and Hinrich Schütze 219

Out-domain Chinese new word detection with statistics-based character embedding
Yuzhi Liang, Min Yang, Jia Zhu, and S. M. Yiu 239

Effectiveness of data-driven induction of semantic spaces and traditional classifiers for sarcasm detection
Mattia Antonino Di Gangi, Giosué Lo Bosco, and Giovanni Pilato 257

InferPortOIE: A Portuguese Open Information Extraction system with inferences
Cleiton Fernando Lima Sena and Daniela Barreiro Claro 287

Weighted finite-state transducers for normalization of historical texts
Izaskun Etxeberria, Iñaki Alegria and Larraitz Uria 307

Emerging trends: GANs vs. good enough
Kenneth Ward Church 323

The cover illustration is computer generated from an engraving of the Tower of Babel in an eighteenth-century bible.
