Abstract

In the abstract, these sentences (page 1, line 5) should be:

'Additionally, hepatic betaine–homocysteine methyltransferase concentration as well as its mRNA abundance and lecithin level were found increased (P<0.05) by betaine supplementation in both basal diet-fed rats and high-fat diet-fed rats. Betaine administration in high-fat diet-fed rats exhibited a higher (P<0.05) concentration of hepatic carnitine palmitoyltransferase 1 (CPT1) compared with high-fat diet-fed rats.'

Materials and methods

Hepatic histology and hepatic lipid metabolites analysis

In this paragraph, the last sentence (page 2, line 15) should be:

'Hepatic carnitine, carnitine palmitoyltransferase 1 (CPT1) and betaine–homocysteine methyltransferase (BHMT) concentration were determined by using ELISA kits (A&D Company Limited, China) according to manufacturer’s instructions.'

The catalogue numbers of the ELISA kits:

- Rat CPT1 ELISA kit, code-CSB-E16442r;
- Rat BHMT ELISA kit, code-CSB-EL002693RA.

Results

Betaine elevated the concentration and the mRNA expression of betaine–homocysteine methyltransferase in the liver

In this paragraph, the first sentence (page 4, line 1) should be:

'Compared with groups without betaine administration (T1 and T3), betaine supplementation groups (T2 and T4) exhibited a significant increase (P<0.05) in the concentration of BHMT in the liver (Fig. 3a)). High-fat diet also elevated (P<0.05) the concentration of BHMT when compared with rats fed with basal diet.'

Betaine increased the concentration, gene and protein expression of fibroblast growth factor 21, and elevated the gene expression of AMP-activated protein kinase in the liver

In this paragraph, the first sentence (page 5, line 1) should be:

'The changes of betaine administration on the concentration, gene and protein expression of FGF21 in the liver are shown in Fig. 5(a)–(c).'

Discussion

In this part, the second paragraph the third sentence (page 6, line 6) should be:

'Our results showed that betaine administration elevated the levels of hepatic lecithin and serum lecithin and VLDL in high-fat diet-fed rats, which suggested that betaine reversed hepatic lipid accumulation by elevated lecithin and VLDL levels via increasing the expression and concentration of BHMT, thus enhancing hepatic lipid export. Besides, high-fat diet also increased the concentration of BHMT in the liver.'

In this part, the third paragraph the third sentence (page 6, line 6) should be: The results showed that betaine
administration had no apparent effect on the concentration of CPT1 in rats fed with basal diet.

The titles of the y axes in the Fig. 3(a) and Fig. 4(a) were incorrect. They should read: The concentration of hepatic BHMT (ng/g); The concentration of hepatic CPT1 (ng/g)

The authors sincerely apologise for this errors.
