Handbook of Neural Activity Measurement
Edited by Romain Brette and Alain Destexhe
$120.00: Hb: 978-0-521-51622-8: 489 pp.

Introduction to the Senses
From Biology to Computer Science
Terry R. J. Bossomaier
$75.00: Hb: 978-0-521-81266-5: 358 pp.

Compressed Sensing
Theory and Applications
Edited by Yonina C. Eldar and Gitta Kutyniok

Computer Vision
Models, Learning, and Inference
Simon J. D. Prince

The Circuitry of the Human Spinal Cord
Spinal and Corticospinal Mechanisms of Movement
Emmanuel Pierrot-Deseilligny and David J. Burke

Nonparametric Inference on Manifolds
With Applications to Shape Spaces
Abhishek Bhattacharya and Rabi Bhattacharya
Institute of Mathematical Statistics Monographs

Audiovisual Speech Processing
Edited by Gerard Baillly, Pascal Perrier, and Eric Vatikiotis-Bateson

ORIGINALITY AND COPYRIGHT. Questions concerning neural mechanisms of vision or provide behavioral data are welcomed, provided that they address psychophysics and imaging, and utilizing comparative, developmental, theoretical or computational approaches to understand the biology of vision and visuo-motor control. The journal also publishes research seeking to understand disorders of the visual system and strategies for restoring vision. Studies based exclusively on clinical, psychophysical or behavioral data are welcomed, provided that they address questions concerning neural mechanisms of vision or provide insight into visual dysfunction.

ORIGINALITY AND COPYRIGHT. To be considered for publication in Visual Neuroscience a manuscript cannot have been published previously, nor can it be under review for publication elsewhere. Papers with multiple authors are to be reviewed with the assumption that all authors have approved the submitted manuscript and concur in its submission to Visual Neuroscience. A Transfer of Copyright Agreement must be executed before an article can be published. Government authors whose articles were created in the course of their employment must so certify in lieu of copyright transfer. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

MANUSCRIPT SUBMISSION AND REVIEW. All submissions to Visual Neuroscience are to be submitted via the online submission and review system, please read the Tutorial for Authors or the Tutorial for Reviewers. For information on the new online submission and review system, please read the Tutorial for Authors or the Tutorial for Reviewers. http://mc3.manuscriptcentral.com/cup/vns

MANUSCRIPT SUBMISSION AND REVIEW. For concerns about submission and reviewing process please contact the Editor or Associate Editors.

Subsequent correspondence should refer to the Manuscript Reference Number, which will appear on the Acknowledgments page and to the corresponding author. Each manuscript will normally be reviewed by at least two referees with relevant scientific experience. Authors may suggest appropriate referees, but final selection of referees will be made by the Editor. Reviewers are asked to evaluate manuscripts for their scientific merit and fitness for the journal. Manuscripts are expected to be concise, clear and well-organized. Visual Neuroscience uses the author-date referential style of the Journal of the American Medical Association. In the text, references should be cited as follows:

as shown by Herrick (1948) (Gordon et al., 1973) (Buhle & Pinkel, 1988; Gordon et al., 1987)

The alphabetical list of references begins a new page, and must be typed double-spaced. Each in-text citation must have a corresponding reference and vice versa. List works by different authors who are cited within the same parentheses in chronological order, beginning with the earlier work. Journal titles should not be abbreviated. Only published articles and articles in press should appear in this list. Responsibility for the accuracy of references cited lies with the authors. Brief examples:

Book

Chapter in an edited book

For more than one work by the same author(s) published in the same year, use (Jones, 1986a,b) in text and likewise in the reference section.

Tables.
Tables should be numbered consecutively with Arabic numerals and each should be typed double-spaced on a separate page. All tables are to be submitted as separate files. A short explanatory title and column headings should make the table intelligible without reference to the text. All tables must be cited and their approximate positions indicated in the text.

Figures and legends. The number of figures should be the minimum necessary to make the essential points of the paper. Figures should be composed to occupy a single column (8.3 cm) and no two columns (17 cm) of a page. Figures must have a professional appearance and be prepared to permit reduction. To ensure legibility, letters, numbers, and symbols on figures should have a minimum height of 1 mm when reduced. Photomicrographs must include a calibration bar; if symbols are used on micrographs, they must contrast sufficiently with the background to be clearly visible when printed. Color figures may be published at no charge in the online edition; a charge of $400 for the first color figure, and $250 for subsequent color figures, will be levied for authors requesting color reproduction in the printed version of the journal. Each figure must be cited and its approximate position clearly indicated within the text. Figures must be numbered consecutively and be accompanied by a descriptive caption typed double-spaced on a separate page from the figure. The captions, collected at the end of the manuscript, should concisely describe the figure and identify any symbols and/or calibration bars. Each figure must be submitted electronically as a separate file. Electronic versions of figures should be submitted as TIFF or EPS files at 108% of a suitable final size. Color images for print should be 300 dpi and prepared in RGB mode; halftone and grayscale figures should be 300 dpi; line artwork should be 1200 dpi. (Please note that each manuscript can have up to 200 MB of uploaded files, and that the LZW compression option in Adobe Illustrator is acceptable as well.)

COPYEDITING AND PAGE PROOFS. The publisher reserves the right to copyedit manuscripts to conform to the style of Visual Neuroscience. The corresponding author will receive page proofs for final proofreading. No rewriting of the final accepted manuscript is permitted at the proof stage, and substantial changes may be charged to the authors.

OFFPRINTS. The corresponding author will receive 25 free offprints of the accepted version. A form will accompany the proofs allowing orders for complete copies of the issue and for the purchase of additional offprints. Offprint requirements of all coauthors must be included in the manuscript. Authors may also order offprints at the time of acceptance, at the current rates, and will be invoiced before publication.

References. Visual Neuroscience uses the author-date referencing style of the Journal of the Psychological. In the text, references should be cited as follows:

as shown by Herrick (1948) (Gordon et al., 1973) (Buhle & Pinkel, 1988; Gordon et al., 1987)

The alphabetical list of references begins a new page, and must be typed double-spaced. Each in-text citation must have a corresponding reference and vice versa. List works by different authors who are cited within the same parentheses in chronological order, beginning with the earlier work. Journal titles should not be abbreviated. Only published articles and articles in press should appear in this list. Responsibility for the accuracy of references cited lies with the authors. Brief examples:
