

## INFORMATION FOR AUTHORS

The *Bulletin of the Australian Mathematical Society* aims at quick publication of original research in all branches of mathematics. To ensure speedy publication, only articles which are sufficiently well presented, able to be published without revision, and which are judged by the Editor (often in consultation with an Associate Editor) to be competitive are refereed. This policy is in the interests of authors, as a quick rejection is better than a slow rejection. The *Bulletin* receives more than five times the material that can be published, therefore there are many commendable papers not accepted. Editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after peer review.

Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere. For a paper to be acceptable for publication, not only should it contain new and interesting results, but also

- (i) the exposition should be clear and attractive, and
- (ii) the manuscript should be in publishable form, without revision.

Further information regarding these requirements may be found through our website [www.austms.org.au/Bulletin](http://www.austms.org.au/Bulletin). Authors are asked to avoid, as far as possible, the use of mathematical symbols in the title.

Articles should be prepared in  $\LaTeX$  using  $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\LaTeX$  packages and submitted as a PDF file via our journal management system, at [www.austms.org.au/Publications/Submissions/BAustMS](http://www.austms.org.au/Publications/Submissions/BAustMS). This permits authors to track their papers through the editorial process. Recent versions of  $\TeX$  are able to produce PDF files directly. A  $\LaTeX$  class file for the *Bulletin* can be downloaded from the website. Authors who need assistance may email the secretary of the *Bulletin* at [editor@bulletin.austms.org.au](mailto:editor@bulletin.austms.org.au).

Authors are advised to keep copies of all files of the submitted article; the *Bulletin* will not accept responsibility for any loss.

## EDITORIAL POLICY

**1. References.** Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are in preparation or submitted. Where the work cited is not readily accessible (for example, a preprint) a copy of the article should be included with your submission.

### 2. Abstracts.

1. Each paper must include an abstract of not more than 150 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

**3. Subject Classification and Key Words.** Authors should include a few key words and phrases and one or more classification numbers, following the American Mathematical Society 2010 Mathematics Subject Classification for all codes. Details of this scheme can be found on the web at [www.ams.org/msc](http://www.ams.org/msc).

**4. Abstracts of PhD Theses.** The *Bulletin* endeavours to publish abstracts of all accepted Australasian PhD theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within six months of the degree being approved.

This journal issue has been printed on FSC-certified paper and cover board. FSC is an independent, non-governmental, not-for-profit organisation established to promote the responsible management of the world's forests. Please see [www.fsc.org](http://www.fsc.org) for information.

## Table of Contents

<b>Some results on the difference of the Zagreb indices of a graph</b> <i>An, M. &amp; Xiong, L.</i>	177
<b>Some quartic Diophantine equations in the Gaussian integers</b> <i>Izadi, F., Naghdali, R. F. &amp; Brown, P. G.</i>	187
<b>Shifted convolution sum of <math>d_3</math> and the Fourier coefficient of Hecke–Maass forms</b> <i>Tang, H.</i>	195
<b>Shrinking targets for nonautonomous dynamical systems corresponding to Cantor series expansions</b> <i>Fishman, L., Mance, B., Simmons, D. &amp; Urbaniski, M.</i>	205
<b>On graphs of prime valency admitting a solvable arc-transitive group</b> <i>Kuzman, B.</i>	214
<b>Fixed point characterisation for exact and amenable action</b> <i>Dong, Z. &amp; Wang, Y. Y.</i>	228
<b>A note on pseudovarieties of completely regular semigroups</b> <i>Almeida, J. &amp; Costa, A.</i>	233
<b>Weighted pseudo almost periodic solutions for differential equations with piecewise constant arguments</b> <i>Zhang, L.-L. &amp; Li, H.-X.</i>	238
<b>A diffusive logistic equation with memory in Bessel potential spaces</b> <i>Caicedo, A. &amp; Viana, A.</i>	251
<b>On hyperstability of generalised linear functional equations in several variables</b> <i>Zhang, D.</i>	259
<b>Directional time–frequency analysis via continuous frames</b> <i>Christensen, O., Forster, B. &amp; Massopust, P.</i>	268
<b>A note on cyclic amenability of the Lau product of Banach algebras defined by a Banach algebra morphism</b> <i>Abtahi, F. &amp; Ghafarpanah, A.</i>	282
<b>Derivations of Fréchet nuclear <math>GB^*</math>-algebras</b> <i>Weigt, M. &amp; Zarakas, I.</i>	290
<b>Fredholm modules over graph <math>C^*</math>-algebras</b> <i>Crisp, T.</i>	302
<b>Toeplitz operators between Fock spaces</b> <i>Lu, J. &amp; Lv, X.</i>	316
<b>Local boundedness of nonautonomous superposition operators in <math>BV[0, 1]</math></b> <i>Kasprzak, P. &amp; Maćkowiak, P.</i>	325
<b>Abstracts of PhD Theses</b>	
<b>Canards in advection–reaction–diffusion systems in one spatial dimension</b> <i>Harley, K.</i>	342
<b>Metastable sets in open dynamical systems and substochastic Markov chains</b> <i>Stuart, R. M.</i>	344
<b>An integrable and exactly solvable non-Hermitian BCS Hamiltonian and generalised exclusion statistics</b> <i>Moghaddam, A.</i>	346
<b>Modelling and optimisation of railway crew scheduling</b> <i>Hanafi, R.</i>	348
<b>Mathematical analysis of population growth subject to environmental change</b> <i>Safuan, H. M.</i>	351
