The Marine Biological Association of the United Kingdom

The Association is a learned society founded in 1834 and incorporated by Royal Charter in 1911. The Marine Biological Association (MBA) provides a unified, clear, independent voice on behalf of the marine biological community. In 1888, the MBA opened the Plymouth laboratory at Citadel Hill.

The MBA is also a registered charity with key aims being to promote scientific research into all aspects of life in the sea, including the environment on which it depends, and to disseminate to the public the knowledge gained.

The Patron of the Association is His Royal Highness the Duke of Edinburgh, who is also an Honorary Fellow.

The work of the Association is controlled by the Council elected annually by its members, universities, research institutions, the Fishmongers’ Company and other public bodies.

The Plymouth laboratory was opened in June 1888, and, since that date, considerable additions have been made to the buildings, including a library, resource centre, extensive lab accommodation and visitor facilities.

In the case of species not covered by the current law, papers will be published only if they comply with the legal requirements of the UK Home Office.

The work of the Association is controlled by the Council elected annually by its members, universities, research institutions, the Fishmongers’ Company and other public bodies.

All correspondence should be addressed to: The Membership Secretary, Marine Biological Association, The Laboratory, Citadel Hill, Plymouth, PL1 2BP, UK.
