NEOTEC: Highly Effective Antiseptic Handwash

NEOTEC Antiseptic Handwash employs the revolutionary new concept of low-iodine technology to provide 4 to 5 times the amount of free iodine—the "major bactericidal agent"—as in existing povidone-iodine solutions. NEOTEC has a rapid bactericidal effect against a wide range of organisms typically encountered in high-risk areas of the hospital.

NEOTEC: Less Irritating Antiseptic Handwash

NEOTEC Antiseptic Handwash combines high efficacy with the mildness required by nurses and physicians who must wash their hands often every day. In a direct-comparison evaluation, NEOTEC caused no irritation or allergic reactions, whereas 25% of the subjects using a 10% povidone-iodine solution had adverse reactions! Thus, NEOTEC is ideal for use in the ER, ICU, CCU, nursery, or wherever high-risk procedures are routinely performed.
of an Antiseptic Handwash

Non-Staining...

Economy

NEOTEC: Non-Staining Antiseptic Handwash
NEOTEC Antisepctic Handwash works itself into a pure white, non-staining lather that won’t discolor skin or uniform. Concentrated NEOTEC washes right out of clothing.

NEOTEC: Highly Economical Antiseptic Handwash
NEOTEC fits any hospital cost-containment or DRG program because it’s less expensive than other antiseptic handwashes presently on the market. Foot-operated NEOTEC dispensers are available. Specify NEOTEC for use in all high-risk areas of the hospital where you require an effective, mild, non-staining, economical antiseptic handwash.

Sporicidin, diluted 1:16, inactivates the Hepatitis B Virus in 10 minutes.

(centers for Disease Control, Phoenix, Arizona)

Completely disinfects flexible and rigid scopes in 10 minutes with only 0.13% glutaraldehyde.

Safe to use... Does not cloud scope lenses nor harm metals, rubber and/or plastics. Does not stain or irritate the hands. No gloves are necessary for safety. Vapors do not irritate the eyes or nostrils.

Most effective... The only sterilizing solution which is fully effective against the tubercle bacillus, influenza, hepatitis and enteroviruses when diluted 1 in 16.

Stable... Fully effective for 30 days after activation.

Proven... The most effective cold sterilant and disinfectant ever registered by the E.P.A.

"Sporicidin, diluted 1 in 16, (0.13% glutaraldehyde), is effective for high level hospital disinfection..." Centers for Disease Control, Atlanta, GA (Guidelines... revised August 1982)

“This study has determined that although E.P.A. requirements for classifying a sterilizing agent were satisfied by Cidex, they were exceeded by Sporicidin.”

INNOVATIVE
The Mediscus Mark V-A Pressure Treatment System is an innovative and effective approach to preventing and treating pressure sores. With its temperature controlled air pressure system, the patient is cared for on 21 pliable, vapor permeable, yet waterproof sacs. These sacs are arranged in five sections, each with its own pressure control dial and pressure gauge.

- The air flowing through the vapor permeable air sacs dries exudate, removing a breeding ground for bacteria, without dehydrating the patient.
- Draw sheets, made of the same material as the air sacs, protect the underlying air sacs from excessive ointments, drainage and perspiration.
- The polyurethane-coated nylon air sacs and draw sheets can easily be removed from the bed and laundered, disinfected and sterilized using standard hospital procedures.

COST EFFECTIVE
The minimal surface pressure of the Mark V-A decreases complications of immobilized patients and eliminates factors that retard the healing process, resulting in more rapid healing of wounds and decreased hospital stays. Nursing hours are saved because it is not necessary to turn patients for pressure relief.

The Mediscus Mark V-A Pressure Treatment System and accessories are available through local distributors for RENTAL or PURCHASE. For more information Call Toll Free 1-800-922-9065
In Texas Call 1-713-583-9232.
