Advances in Thermoelectric Materials II

In August of 2011, the Journal of Materials Research (JMR) published a Focus issue entitled “JMR Focus issue: Advances in Thermoelectric Materials.” Since that issue was published, there have been significant advances in thermoelectric materials research, such as a surge in thermoelectric nanocomposites, mesoscale systems, and new naturally occurring materials with favorable thermoelectric performance. Thermoelectric (TE) materials allow for direct thermal-to-electrical energy conversion, as well as conversely performing as solid-state refrigeration materials. This JMR Focus issue will highlight a combination of new theoretical ideas, new materials and new device concepts, various processing and synthesis methods, along with technologies and applications related to direct thermal-to-electrical energy conversion. Studies at various length scales have proved to be crucial to separate the electric and thermal transport in these materials. Theoretical studies of transport properties, band structure, and crystal chemistry of materials, thermodynamic analysis and energy transfer will also be included. Experimental efforts will include new capabilities in solid-state synthesis, new bulk materials, thin films, superlattices and nanostructured materials along with new developments in material property and device performance measurements and metrology techniques.

Contributed articles are sought in the following areas:

- Oxides and other materials with strong electron correlation
- Theoretical guidance to high efficiency thermoelectric (TE) energy conversion
- High efficiency bulk TE materials
- Low dimensional and nanoscale thermoelectric materials
- Thermoelectrics related to harvesting solar energy
- Synthetic strategies for preparing novel materials and compounds
- Naturally occurring TE materials
- Thermoelectric nanocomposite materials
- Mechanical properties of various TE materials
- Materials property measurement and new metrology techniques
- Device performance requirements for future applications
- Applications and new directions in thermal energy conversion
- Mechanical properties of various TE materials

GUEST EDITORS

Terry M. Tritt, Clemson University, USA
Harald Böttner, Fraunhofer Institute IPM, Germany
Ryoji Funahashi, National Institute of AIST, Japan

MANUSCRIPT SUBMISSION

To be considered for this issue, new and previously unpublished results significant to the development of this field should be presented. The manuscripts must be submitted via the JMR electronic submission system by January 15, 2014. Manuscripts submitted after this deadline will not be considered for the issue due to time constraints on the review process. Submission instructions may be found at www.mrs.org/jmr-instructions. Please select “Focus Issue: Advances in Thermoelectric Materials II” as the manuscript type. Note our manuscript submission minimum length of 6000 words. All manuscripts will be reviewed in a normal but expedited fashion. Papers submitted by the deadline and subsequently accepted will be published in the Focus Issue. Other manuscripts that are acceptable but cannot be included in the issue will be scheduled for publication in a subsequent issue of JMR.
Recent Titles

from the Materials Research Society
and Cambridge University Press

Book Collection

Biological Materials Science
Biological Materials, Bioinspired Materials, and Biomaterials
AUTHORS: Marc André Meyer and Po-Yu Chen
ISBN: 9781107010451
List Price: $99.00
MRS Member Discount Price: $79.00
Split into three sections—Basic Biology Principles, Biological Materials, and Bioinspired Materials and Biometrics—this book presents biological materials along with the structural and functional classification of biopolymers, biocatalysts, foams, and ceramic composites.
www.cambridge.org/bms

Biomaterials and Regenerative Medicine
EDITOR: Peter Ma
ISBN: 9781107012097
List Price: $165.00
MRS Member Discount Price: $148.00
Emphasizing basic principles and methodology, this book covers stem cell interactions, fabrication technologies, design principles, physical characterization and biological evaluation, across a broad variety of systems and biomaterials.
www.cambridge.org/biomaterials

Colloidal Quantum Dot Optoelectronics and Photovoltaics
EDITORS: Gerasimos Konstantatos and Edward H. Sargent
ISBN: 9780521198264
List Price: $130.00
MRS Member Discount Price: $104.00
Written in an accessible style by the world’s leading experts, this book captures the most up-to-date research in colloidal quantum dot devices.
www.cambridge.org/colloidal

Fundamentals of Materials for Energy and Environmental Sustainability
EDITORS: David S. Ginley and David Cahen
ISBN: 9781107000340
List Price: $105.00
MRS Member Discount Price: $84.00
A unique, interdisciplinary textbook with contributions from more than 100 experts in energy and the environment from around the world.
www.cambridge.org/ginley

Introduction to Computational Materials Science Fundamentals to Applications
AUTHOR: Richard LeSar
ISBN: 9780521145878
List Price: $95.00
MRS Member Discount Price: $78.00
Emphasizing essential methods and universal principles, this textbook provides everything students need to understand the basics of simulating materials behavior.
www.cambridge.org/lesar

Introduction to Nanofiber Materials
AUTHORS: Frank K. Ko and Yuqin Wen
ISBN: 9780521179835
List Price: $99.00
MRS Member Discount Price: $79.00
Presenting the latest coverage of the fundamentals and applications of nanofibrous materials and their structures for graduate students and researchers, this book bridges the communication gap between fiber technologists and materials scientists and engineers.
www.cambridge.org/ko

Phase Transitions in Materials
AUTHOR: Brent Fultz
ISBN: 97811070576240
List Price: $90.00
MRS Member Discount Price: $72.00
Offering a fresh viewpoint on phase changes and the thermodynamics of materials, this textbook covers the thermodynamics and kinetics of the most important phase transitions in materials science, spanning classical metalurgy through nanoscience and quantum phase transitions.
www.cambridge.org/fultz

Thermodynamics of Surfaces and Interfaces Concepts in Inorganic Materials
AUTHOR: Gerald H. Meier
ISBN: 9780521878018
List Price: $120.00
MRS Member Discount Price: $96.00
This book provides an accessible yet rigorous discussion of the thermodynamics of surfaces and interfaces, delivering a comprehensive guide without an overwhelming amount of mathematics.

Nitrides and Oxynitride Materials

As a result of intensive research during the last several decades, nitride-based compounds have established themselves as inevitable materials with wide ranging applications in solid state lighting, displays, power electronics, and photovoltaics, thanks to their unique properties and capabilities beyond those of other electronic materials. Despite the fact that many nitride-based devices are already on the market, numerous challenges remain to be resolved in order to fully explore and implement their potential. It has been shown recently that the unique features of these materials, such as polarity, can lead to new device modes or improved device performance. Furthermore, the convergence of nitride materials and nanomaterials could lead to additional functionalities when combined with organics and polymers. Fundamental understanding of underlying mechanisms of surface, interface, doping, and defect-related properties will determine their full utilization and will result in exciting opportunities for further improvements, inventions, and commercialization.

This Focus Issue seeks to collect papers from research groups with diverse backgrounds in nitride and oxynitride materials and nanomaterials to discuss recent scientific and technological achievements. Submissions may cover experimental and theoretical aspects, as well as applications of these materials.

Contributed articles are sought in the following areas:
- Nitrides of different polarities
- Advances in nitride nanostructures
- Surface science of nitrides
- In-situ functionalization of nitrides
- Wide and ultra-wide bandgap nitrides (e.g., high Al-content AlGaN, BN)
- Bulk growth and epitaxy
- Crystal chemistry of (oxy)nitrides (e.g., high-pressure phases, single crystals)
- (Oxy)nitrides for energy conversion and storage (e.g., photocatalysts, hydrogen storage)
- (Oxy)nitrides for biomedical applications
- Luminescent (oxy)nitrides for lighting and displays
- Nitride ceramics

About the Materials Research Society

The Materials Research Society (MRS®) is a not-for-profit scientific association founded in 1973 to promote interdisciplinary, goal-oriented basic research on materials of technological importance. Membership in the Society includes over 16,000 scientists from industrial, government, and university research laboratories in the United States and abroad.

The Society’s interdisciplinary approach to the exchange of technical information is qualitatively different from that provided by single-discipline professional societies because it promotes technical exchange across the various fields of science affecting materials development. MRS sponsors three major international annual meetings encompassing many topical symposia, as well as numerous single-topic scientific meetings each year. It recognizes professional and technical excellence, conducts tutorials, and fosters technical exchange in various local geographical regions through Section activities and Student Chapters on university campuses.

MRS publishes symposia proceedings, the MRS Bulletin, and other volumes on current scientific developments. The Journal of Materials Research, the archival journal spanning fundamental developments in materials science, is published twenty-four times a year by Cambridge University Press for the MRS. MRS Communications is a full-color letters and prospectives journal focused on groundbreaking work across the spectrum of materials research.

MRS regular and student members may subscribe to Journal of Materials Research. See inside front cover for subscription rates for Journal of Materials Research.

MRS is an Affiliated Society of the American Institute of Physics and participates in the international arena of materials research through associations with professional organizations.

For further information on the Society’s activities, contact MRS Headquarters, 506 Keystone Drive, Warrendale, PA 15086-7573; telephone (724) 779-3003; fax (724) 779-8313.
