Animal Health Research Reviews provides an international forum for the publication of reviews and commentaries on all aspects of animal health. Papers include in-depth analyses and broader overviews of all facets of health and science in both domestic and wild animals. Major subject areas include physiology and pharmacology, parasitology, bacteriology, food and environmental safety, epidemiology and virology. The journal will be of interest to researchers involved in animal health, parasitologists, food safety experts and academics interested in all aspects of animal production and welfare.

Nutrition Research Reviews offers a comprehensive overview of nutritional science today. By distilling the latest research and linking it to established practice, the journal consistently delivers the widest range of in-depth articles in the field of nutritional science and has done so for the past twenty-one years. It presents up-to-date, concise and critical reviews of key topics in nutrition science, advancing new concepts and hypotheses that encourage the exchange of fundamental ideas on nutritional well-being in both humans and animals.

https://doi.org/10.1017/S0022029916000025X Published online by Cambridge University Press
Full Directions to Contributors, of which this is a summary, can be found at the following web site
http://titles.cambridge.org/journal_catalogue.asp?mnemonic=dcar

The Summary should start with a sentence clearly identifying the article type and presenting the objectives (eg This Technical Communication Research describes...).

References
Refer to a recent issue and ensure that your reference citations comply with Journal style. References should be given in the text as Brown & Jones (1987) or (Schmidt, 1985; Nakamura et al 1989); the first author with et al. is used for papers with three or more authors. Where necessary, paper numbers (published as Letters) should be added, eg (1985; 1986). When several references appear together in the text, cite them in chronological order, and alphabetically within years. The Reference list at the end of the paper, which should begin on a fresh page, is given in strict alphabetical order, starting with the name of the author. The order of pages, the name of the journal in the full, the volume and the page range. Titles of articles originally published in another language should be given in English translation, this is indicated by the use of square brackets. References to books should include the town of publication and the publisher, with editor(s) and volume and edition number where appropriate. Unpublished work should be given in the text (use authors’ initials and surname) and not in the Reference list. You are reminded that it is your responsibility to check all references.

Data presentation
Choose the most economical form of data presentation, remembering that this could include data presented previously in the literature. For descriptive research, avoid large tables and figures that are comprised mainly of data that do not differ significantly between treatments. For descriptive research, consider the use of Supplementary Files for all apart from the most important observations.

Tables
Tables should be numbered and carry headings enabling them to be understood without reference to the main text. Any abbreviations should be defined. Each Table should be typed separately at the end of the article, but their approximate position should be indicated by a marginal mark (eg Table 1 near here), Symbols for footnotes should use of *, ** etc, which should be used to indicate levels of significance.

Figures and illustrations
Figures should be numbered and the combination of figure and legend should be comprehensible without reference to the main text. Figures must be prepared using an editable file format and then sent to the Journal as a separate file. With all figures use a single-line type, which may be stated in the first line of the summary. Page limits apply to all types of manuscripts. These are reported as Text Equivalents (TEQ) where one word is one TEQ and each figure or table is 125 TEQ. Research Papers must include four or more figures or tables, and should include only figures and tables that are essential to the understanding of the research objectives. Research Communications should be around two figures or tables. A TEQ should be made only one or two figures or tables and a minimum of around 10 citations. Manuscripts that exceed these recommendations will be returned for revision.

Reviews and Editorials
These are invited, and separate guidance will be provided with the invitation. The Editors are always willing to suggest topics, with or without possible authors.

Statistical treatment
Authors should, where possible, discuss their work with a statistician at an early stage and give attention to sample size, individual results should not normally be normal. The methods of statistical analysis should be clearly described; a suitable reference is adequate. Authors should make it clear whether the journal quoting SED, SD, S.E, S.E.D, SEM, etc. and these are different should be supported by the level of significance involved. Differences should be claimed or implied P < 0.05.

Gene Sequences
Original DNA sequences reported in the Journal must also be submitted to GenBank. Instructions can be found at http://www.ncbi.nlm.nih.gov/Genbank/index.html

Ethics of experiments
All research published in the Journal must comply with the locally-applicable ethical legislation or codes for animal or human research, and there must be a clear statement detailing that compliance.

Units
All commonly-used non-SI metric units should be used whenever possible Solutions may be reported in terms of molality (M) or as mol%, providing there is consistency and no ambiguity. Give compositions based on mass or volume as (eg. mg/l) or mg/kg and not percentage. Report all details that would be specific that would be required for repetition. Normally should not be used.

Microorganisms
The organisms should be described unambiguously, with genus, species and subspecies (if any) in italic and strain number or source in roman. Usage should conform to current international rules. Several common synonyms may be used after the first mention if desired.

Chemical formula
These should be unambiguous. It is permissible but not required to use symbols for inorganic formulae.

Enzymes

Other nomenclature, symbols, abbreviations and conventions
Authors should consult a current issue for guidance. Useful information on biochemical nomenclature and permitted acronyms can be found in Biochemical Journal 169, 11-14 and on nutrient nomenclature in the British Journal of Nutrition. If authors use other abbreviations or acronyms it should be defined at first use and their number restricted to ensure that the text is readable. Always use Arabic numerals with units; otherwise use words for 1-10, (e.g. 3 weeks, three cows, 34 sheep) but avoid mixed lists. Time should be given by the 24 h clock, e.g. 14:15, without h or hours.

Reversion of papers
If a reversion is returned to authors for possible amendment or revision, a period of 4 months will normally be allowed. The editors will be ready to consider a revised or rewritten paper at any time, but after 4 months it will be considered a new paper and given a new submission date.

Proofs
Authors will be advised when to expect proofs, which should be returned without delay following the instructions supplied at the time. Proofs are sent for the correction of any printer’s or editor’s errors, not for addition of new material or revision of the text. Excessive alteration may have to be deleted, etc. made at the authors’ expense, and may delay publication. Order forms for paid offprints are sent with proofs and should be returned directly to Cambridge University Press following the instructions supplied with the proofs.

Cambridge Journals Language Editing Service
Cambridge recommends that authors have their manuscripts checked by an English language native speaker before submission; this will ensure that submissions are judged at peer review exclusively on academic merit. We list a number of third-party services specialising in academic editing and/or translation, and suggest that authors contact as appropriate. Use of any of these services is voluntary, and at the author’s own expense; http://journals.cambridge.org/action/linfopage?&pgid=8728&level=2&menu=Authors&pgid=3601
