**Introduction:** We present the clinical case of a patient where the psychotic clinic coexists with gender dysphoria. This scenario can be the result of a change in gender identity derived from the psychotic process or appear independently of it.

**Objectives:** We want to explain the importance of knowing how to act with a patient in whom these two processes coexist.

**Methods:** 20-year-old woman, with no history of mental health. She comes to the emergency department for behavioral alteration. The family observes strange behaviors, unmotivated laughter, soliloquies and aggressive episodes. Abandonment of studies, hobbies and radical physical change. Delusions of prejudice and self-soliloquies and aggressive episodes. Abandonment of studies, hob-

**Results:** The patient was admitted to the psychiatric outpatient unit with symptoms of anhedonia, decreased sleep, decreased self-esteem for the last month. The patient was diagnosed with depression and he started to take 37,5 mg venlafaxine per day. After one month, when venlafaxine dose was increased to 75mg and the patient started to complain of painful ejaculation. The pain continued from the beginning to the end of the ejaculation. The pain increased more when the venlafaxine dose increased to 150mg per day. The patient was consulted at the urology clinic. The urological examination, laboratory tests (direct microscopic examination of the urinary system. The dose of venlafaxine decreased and the patient started to take 20 mg of fluoxetine per day. His symptoms disappeared after venlafaxine was discontinued.

**Conclusions:** To literature, this is the second presentation of painful ejaculation observed during the use of venlafaxine.

**Disclosure:** No significant relationships.

**Keywords:** painul ejaculation; sexual medicine; antidepressant treatment; venlafaxine

**Introduction:** A significant problem for clinical judicial experts when issuing court opinions is the possibility that the assessed person may be simulating, as well as lack of examination tools that would increase the objectivity and reliability of the assessment. This presentation covers studies on psychological characteristics of perpetrators of crimes against sexual freedom.

**Objectives:** The participants were asked to complete psychological tools - Rosenberg Self-Esteem Scale, Satisfaction with Life Scale, Emotion Understanding Test, Revised NEO Personality Inventory, Attachment Style Questionnaire.
