The Nutrition Society

The Nutrition Society provides an international forum for the publication and dissemination of research and scholarship in the form of peer-reviewed original papers and reviews, and for discussion in the form of editorials, commentaries, and correspondence, with a specific focus on nutrition-related public health.

The scope of The Nutrition Society encompasses nutrition and nutrition policy at a population level, including work on assessment, monitoring, and surveillance in population-based samples. We welcome papers that:

- Describe, discuss, debate and influence nutrition-related public policy
- Build intelligence about the development, implementation, and evaluation of interventions and community nutrition programs and offers
- Describe, discuss, debate and influence nutrition-related public policy
- Serve as a building block for effective public health nutrition action, including workforce development and educational issues
- Describe, discuss, debate and influence study design and nutrition as related to the environment and sustainability

We publish papers that are innovative and contain new knowledge to the literature. Papers should be succinct (i.e., usually well under 5000 words not including the abstract, references, tables, figures and acknowledgements). Short communications (≤2000 words) are welcome. We publish research, scholarship, and discussions that engage and involve stakeholders.

Papers should be succinct (i.e., usually well under 5000 words not including the abstract, references, tables, figures and acknowledgements). Short communications (≤2000 words) are welcome. We publish research, scholarship, and discussions that take a population and preventative approach to nutrition-related issues, and ideas and suggestions for topics for debates are also welcome. We publish special issues.

Public Health Nutrition is available on the Internet at: https://www.nutritionsociety.org/doi/issue/1368-9800

International Editorial Board

- Dr. Minoo Bozorg motivated University of Nebraska, in space

The Nutrition Society focuses on major topics of interaction. The domain includes research, scholarship, and discussions that take a population and preventative approach to nutrition-related issues, and ideas and suggestions for topics for debates are also welcome. We publish special issues.

Public Health Nutrition (PHN) provides a forum for the presentation of original research findings and high quality reviews of key topics, and for discussion of and debate on current issues and controversies. It also publishes specialized conference reports, publishing of the proceedings, including contributions on all sources of funding, and the nature of the contribution of each author to the manuscript. If there are no competing interests, this must be stated. Authors are advised to provide this information during the submission process and should not include it as a part of the manuscript to allow for double-blind reviewing.

Arrangement of papers:

1. Title page should include the article title, author(s), affiliation(s), up to eight keywords, one author identified for correspondence (with full postal address, telephone and fax numbers, email address), and a running title of up to 45 characters. The title page should be submitted online as a separate cover letter to the manuscript, to enable double-blind reviewing.

2. Abstract should be structured, usually using the following internal headings: Objective, Design, Setting, Subjects, Results, Conclusions. Abstracts should be intelligible without reference to text or figures and should not exceed 250 words.

3. Text should be divided under headings (typically to include Introduction, Methods, Results, Discussion and Conclusions), and sub-headings as appropriate. Conclusions should include recommendations that derive from the research that are: concrete, feasible, and potentially effective. Emphasizing that more research is needed is usually not necessary unless there is specific commentary to this effect. All submissions must include a statement that the research was conducted in accordance with guidelines laid down by the Declaration of Helsinki and approved by an ethics review committee.

4. Acknowledgements (sources of funding, competing interests declared) should be included at the end of the paper. All other contributions (editorials, position papers, invited commentaries, book reviews, and letters to the Editor(s)) undergo an internal review process by at least two members of the editorial team. Invited commentaries and book reviews may also be checked externally as necessary to avoid technical errors and to improve salience.

Copyright: At the time of acceptance, authors will be asked to provide a completed copy of the 'License to Publish' (in lies of copyright transfer), available at http://www.nutrition.society.org. It is the author's responsibility to obtain written permission to reproduce (in part) any material (text and figures) that has appeared in another publication.

Preparation of manuscripts: Please refer to the full Directions to Contributors on our website (http://www.nutritionsociety.org). Manuscripts should be submitted in English, and spelling should follow the Oxford English Dictionary. For authors whose native tongue is not English, in-house editorial assistance to their contributors will improve clarity. On acceptance, all contributions are subject to editorial amendment to conform to house style. No material should be prepared in a common word processing package (Word for Windows is preferred) in Times New Roman or other classic typeface, prepared with double-space, 12 point text, justified, and with page and line numbers. Standard abbreviations and SI units must be used.
