

CAMBRIDGE

A Handbook of Categorical Algebra

FRANCIS BORCEUX

A Handbook of Categorical Algebra is designed to give a detailed account of what should be known by everybody working in, or using, category theory. As such it will be a unique reference. The three volumes are written in sequence, with the first being essentially self-contained. There is ample material here for a graduate course in category theory, and the books should also serve as a reference for users.

Volume 1: Basic Category Theory

£45.00 net HB 0 521 44178 1 3 68 pp. 1994

Volume II Categories and Structures

£50.00 net HB 0 521 44179 X 464 pp. 1994

Volume III: Sheaf Theory

£65.00 net HB 0 521 44180 3 544 pp. 1994

Encyclopedia of Mathematics and its Applications 50, 51, 53

First Steps in Modal Logic

SALLY POPKORN

This is a first course in propositional modal logic written from a mathematical standpoint, essential for mathematicians, philosophers and computer scientists. The book covers all the basic material: propositional languages, semantics and correspondence results, proof systems and completeness results. There are many exercises, most with solutions.

£25.00 net HB 0 521 46482 X 328 pp. 1994

C by Example

NOEL KALICHARAN

C by Example assumes only familiarity with basic programming concepts such as variables and looping, but covers all aspects of the C language, including a detailed look at file handling and pointers. The text is self-contained and has a wealth of examples and exercises that test the understanding of the concepts developed in each chapter. Anybody who wishes to get to grips with the art of programming in C will find this a most valuable book.

£35.00 net HB 0 521 45023 3 378 pp. 1994

The Uncertain Reasoner's Companion

A Mathematical Perspective

J. B. PARIS

Professor Paris provides here an introduction to the mathematical foundations of the subject. It is suited for readers with some knowledge of undergraduate mathematics but is otherwise self-contained, collecting together the key results on the subject, and formalizing within a unified framework the main contemporary approaches and assumptions.

£25.00 net HB 0 521 46089 1 224 pp.

Cambridge Tracts in Theoretical Computer Science 39

Metamathematics, Machines, and Gödel's Proof

NATARAJAN SHANKAR

The author describes the use of computer programs to check the proofs of several celebrated theorems in metamathematics, including those of Gödel and Church-Rosser. The computer verification using the Boyer–Moore theorem prover yields precise and rigorous proofs of these difficult theorems. It also demonstrates the range and power of automated proof checking technology.

£25.00 net HB 0 521 42027 X 248 pp.

Cambridge Tracts in Theoretical Computer Science 38

Foundations of Parallel Computing

D. B. SKILLICORN

This is the first comprehensive account of this new approach to the fundamentals of parallel programming. It presents a methodology for software construction that produces architecture-independent and intellectually abstract software.

£25.00 net HB 0 521 45511 1 209 pp.

Cambridge International Series in Parallel Computation 7

Mathematical Theory of Domains

V. STOLTENBERG-HANSEN, I. LINDSTRÖM and E. R. GRIFFOR

This book is the first devoted to providing an accessible, unified and self-contained introduction to domain theory. It can be, and has been, used as an introductory textbook or as a general reference for professionals in computer science and logic.

£30.00 net HB 0 521 38344 7 350 pp.

Cambridge Tracts in Theoretical Computer Science 22

Computational Geometry in C

JOSEPH O'ROURKE

This is the first textbook suitable for introducing undergraduate students to the design of geometry algorithms. The self-contained treatment presumes only an elementary knowledge of mathematics, but reaches topics on the frontier of current research. Numerous exercises are provided at the end of every section.

£35.00 net HB 0 521 44034 3 320 pp.

£16.95 net PB 0 521 44592 2

Mathematical Structures in Computer Science

Instructions for Authors

Editorial policy

Mathematical Structures in Computer Science (MSCS) is a journal of theoretical computer science which focuses on the application of ideas from the structural side of mathematics and mathematical logic to computer science. The journal aims to bridge the gap between theoretical contributions and software design, publishing original papers or broad surveys with original perspectives in all areas of computing, provided that ideas or results from logic, algebra, geometry, category theory or other areas of logic and mathematics form a basis for the work. The journal also welcomes applications to computing based on the use of specific mathematical structures (e.g. topological and order-theoretic structures) as well as on proof-theoretic notions or results. The use of logic, categorical or algebraic language just as a unifying tool for a variety of applications is appreciated, in particular if linked with relevant experimental activity.

The purpose of the journal is to increase the circulation of new very high standard results in fast growing areas which are currently influencing various aspects of actual computing. Indeed, this journal is not meant to be only a 'theory journal' but, by choosing as a theme the use of mathematical methods of Computer Science independently of their area of application, it aims to highlight connections among different topics and to encourage applications of theoretical contributions.

In order to promote the use of categorical methods in computer science, expository and introductory papers are also welcome, with the specific aim of turning the (sometimes excessively) technical jargon of the community of category theorists to a commonly understood language for as many working computer scientists as possible. Articles in other areas of pure mathematics may be considered as well provided that there is a clear connection to computational issues or they investigate mathematical structures whose relevance to computer science is well established. However, these contributions should be directed to the broad audience of computer scientists to which this journal is addressed. Equally, discussions of methodological or philosophical nature concerning the foundation of Computer Science are of interest for the journal.

Submission of manuscripts

Papers may be submitted to any member of the Editorial Board. Three copies should be sent accompanied by the author's address, telephone and fax number, and if possible, an electronic mailing address.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher.

The publisher encourages submission of papers written in LaTeX using the MSCS LaTeX style file which can be obtained using anonymous FTP from the internet address <ftp.cup.cam.ac.uk>. Go into the directory `/pub/texarchive/journals/latex/` where you will find a concatenated file called `mcs.all`. This file contains `readme.txt`, `mcs.sty` and `mseguid.tex`. If you use `mseguid.tex` you will get a full set of instructions for using the style file. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact texline@cup.cam.ac.uk. While use of the MSCS LaTeX style file is preferred, ordinary LaTeX or plain TeX files can also be accepted.

On final acceptance of their paper, authors should send the LaTeX source code including all figures (line figures only) and author-defined macro and style files, on disc to the Editor-in-Chief, together with a hard copy produced using the same file. Discs should be in Apple Mac or PC format and will not be returned. The publisher reserves the right to typeset any article by conventional means if the author's TeX code presents problems in production.

Layout of manuscripts

Papers should be typewritten in **double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 300 words and should end with a brief concluding section.

Illustrations

Figures should be drawn in indian ink on good quality white paper or produced by computer to comparable quality. Wherever possible they will be reproduced with the author's original lettering. Originals of figures should not be sent until the paper has been accepted. A list of captions should be attached separately.

References

The Harvard system of references should be used. In the text, a reference should be quoted by the author's name and date in parentheses, in date order, e.g. (Smith 1983; Jones and Jones 1985; Hunter 1986a,b). Where there are three or more authors, the first name followed by et al. should be used. A full list of references should be given at the end of the main text, listing, in alphabetical order, surname of author and initials; year of publication (in parentheses); article title; journal name abbreviated in accordance with the *World List of Scientific Periodicals* (4th edn); volume number; inclusive page numbers. For books and conference proceedings, place of publication and publisher (and Editor(s) if appropriate) should be included.

Proof Reading

Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

Offprints

Twenty-five offprints of each article will be supplied free to each first named author. Extra offprints may be purchased from the publisher if ordered at proof stage.
