Cambridge’s economics list is renowned for the breadth and quality of its publishing.

Our book list is home to the work of some of the most important economists in the history of the discipline, most notably John Maynard Keynes, as well as the work of almost 30 Sveriges Riksbank Nobel Prize laureates, including Kenneth Arrow, Herbert Simon, Robert Solow and Joseph Stiglitz.

This is complemented by a cluster of key journals such as Econometric Theory, Journal of Economic History and Journal of Financial and Quantitative Analysis.

For further information, please contact your local agent or publisher.

AMIS

"Institutions are the stuff of social and economic life. Many influential organizations, including the World Bank, have recognized the importance of institutions for economic development. The Nobel Prize has been awarded to Ronald Coase, Douglass North, Gunnar Myrdal and Simon Kuznets for their pioneering work in institutional economics.”

The Journal of Institutional Economics is devoted to the study of the nature, role and evolution of institutions in the economy, including firms, states, markets, money, households and other vital institutions and organizations. It welcomes contributions by all schools of thought that can contribute to our understanding of the features, development and functions of real world economic institutions and organizations.

The Journal of Institutional Economics aims to provide all authors with an easy-to-use, accessible, and the Harvard referencing system should be used. Authors are strongly encouraged to use the web-based reference manager EndNote for keeping track of their references. The reference number of the manuscript should be quoted in all correspondence with JIE Office and Publishing Staff.

There must be no indication of the personal identity or institution of any author of the article within the article itself, or in the ‘properties’ of the electronic file. Normally, articles (including footnotes and references) must not be longer than 9,000 words. In special cases, such as an extended review or survey article, this limit may be extended to 12,000 words. A declaration of the total word count (including footnotes and references) must accompany any or be within the article.

Papers with a formal content will be considered if it is fully explained for a general readership. The manuscript is considered as much as possible to appealing, the assumptions have sufficient grounding in reality, and the paper enhances our understanding of past, present, or feasible socio-economic institutions. JIE is not interested in the advancement of formal or econometric technique for their own sake.”
