**CALL FOR PAPERS**

of the capital markets of the Asia-Pacific countries to the rest of the world. As a group, these countries have been enjoying the highest economic growth rate in the world. The combined market value of the region's common equities and bond issues accounts for approximately one-third of the world's total capital market volume. The strategic importance of capital markets in this region for international investment decisions is well demonstrated by the increasing number of open- and closed-end investment funds specializing in Asian equities.

Unfortunately, little attention has been paid to the need for a systematic program of study for the region's capital markets. The continually growing demand from industry and academia has called for the launching of an academic journal which specializes in Asian capital markets.
