Dream Machine.

**Rapid, Safe,
Sterile Processing
Was Once
Just A Dream**

● STERIS SYSTEM 1™ has made the dream of rapid and safe sterile processing a reality.

STERIS SYSTEM 1 is the proven, low temperature sterile processing system for immersible surgical and diagnostic devices. Even delicate, heat sensitive scopes, cameras, instruments, and accessories can be safely sterilized in less than 30 minutes-Just In Time for each patient procedure. ●

STERIS SYSTEM 1 also provides peace of mind. There are no toxic fumes, and no disposal restrictions to lose sleep over. ● And liquid processing means that your devices can be sterilized without the drying and wrapping which are required with gaseous systems.

Write or call us today to learn why thousands of health professionals rest assured with the rapid and safe sterile processing of STERIS SYSTEM 1. ○

The STERIS PROCESS™
The Proven Process
Just In Time

STERIS®

STERIS CORPORATION
9450 Pineneedle Drive ■ Mentor, OH 44060
1-800-JIT-4-USE (1-800-548-4873)

The Leader In Site-Of-Use Sterile Processing Systems.

Answers To Commonly Asked Questions About the STERIS PROCESS™

STERILE vs. DISINFECTED

- Q. Does STERIS SYSTEM 1™ sterilize or just disinfect?
- A. STERIS SYSTEM 1 is a sterile processing system, not a disinfectant. The STERIS PROCESS™ is sterilization, and is equal in efficacy to steam or ethylene oxide. Sterilization means the elimination or destruction of all microbial life, including bacterial spores. Unlike disinfection, sterilization eliminates doubt-items are either sterile or they are not. Nothing can be safer than sterile.
- Q. High level disinfection is supposed to eliminate all disease causing organisms. Why isn't this just as good as sterilization?
- A. The potential problems with high level disinfection lie in the disinfection process. Disinfection is most often attempted with a manual process that is inherently difficult to control. Numerous variables-time, temperature, disinfectant concentration, surface contact, bioburden levels, etc.-can adversely affect process outcome if not properly implemented or controlled. Many studies have shown that items which are considered to be "high level disinfected" frequently remain contaminated. The only practical way to be certain that all disease causing organisms have been eliminated is to eliminate all microbial organisms of any type-which is the definition of sterilization.
- Q. Why should I use a sterile scope for a "non-sterile" procedure such as a colonoscopy?
- A. Procedures which some people consider "non-sterile" often involve penetration of mucous membranes, such as during biopsies or polypectomies. Frequently the need to enter this sterile tissue is not determined until after the procedure has already started. Since STERIS SYSTEM 1 can sterilize items in less than 30 minutes-about the same time as it takes to disinfect-there is no reason not to make sterile items the single standard of care for each patient procedure.
- Q. What items can be processed in STERIS SYSTEM 1?
- A. STERIS SYSTEM 1 can process a wide variety of immersible surgical and diagnostic devices such as scopes, cameras, instruments, and accessories. If an item is immersible, can fit in one of the flexible or rigid Processing Trays, and can withstand the low processing temperature of 55.5°C, then it can generally be processed in SYSTEM 1. STERIS is constantly working with medical device manufacturers to ensure that their devices are compatible with SYSTEM 1. Numerous manufacturers endorse the STERIS PROCESS as being an effective and compatible method for sterilizing their devices. If you aren't sure whether a device can be processed in SYSTEM 1, contact the device manufacturer or STERIS.

STERIS Corporation develops, manufactures, and markets sterile processing and infection prevention systems for the worldwide healthcare market. STERIS® is committed to providing products which improve patient, worker, and environmental safety. If you would like more information about STERIS or STERIS SYSTEM 1, please write us or call 1-800-JIT-4-USE (1-800-548-4873).
