

GENETICAL RESEARCH

EDITORIAL BOARD

C. H. WADDINGTON (*Chairman*)
CHARLOTTE AUERBACH D. LEWIS
H. GRÜNEBERG G. PONTECORVO
W. HAYES A. ROBERTSON

EXECUTIVE EDITOR

E. C. R. REEVE

ASSISTANT EXECUTIVE EDITOR

J. O. BISHOP

Volume 8. 1966

CAMBRIDGE
AT THE UNIVERSITY PRESS

1966

*Printed in Great Britain by Spottiswoode, Ballantyne & Co. Ltd.
London and Colchester
and published by the Cambridge University Press
Bentley House, 200 Euston Road, London, N.W.1
American Branch: 32 East 57th Street, New York, N.Y. 10022
Agents in Canada: The Macmillan Company of Canada Limited*

CONTENTS

No. 1 (August 1966)

OSHIMA, Y. and OSHIMA, I. A super-suppressor on the thirteenth linkage group in <i>Saccharomyces</i>	page 1
GILLIE, O. J. The interpretation of complementation data	9
CENTER, E. M. Genetical and embryological studies of the <i>jt</i> form of syndactylism in the mouse	33
MULLER, H. J. and KAPLAN, W. D. The dosage compensation of <i>Drosophila</i> and mammals as showing the accuracy of the normal type	41
CASSELTON, L. A. and LEWIS, D. Compatibility and stability of diploids in <i>Coprinus lagopus</i>	61
SMITH-KEARY, P. F. Restricted transduction by bacteriophage P22 in <i>Salmonella typhimurium</i>	73
ALIKHANIAN, S. I., ILJINA, T. S., KALLAEVA, E. S., KAMENEVA, S. V. and SUKHODOLEC, V. V. A genetical study of thymineless mutants of <i>E. coli</i> K12	83
DEE, J. Genetic analysis of actidione-resistant mutants in the Myxomycete <i>Physarum polycephalum</i> , Schw.	101
FALCONER, D. S. and ISAACSON, J. H. Curly-whiskers and its linkage with tail-kinks in linkage group II of the mouse	111
FISHER, K. W. Amino acid deprivation and its effect on mating ability in <i>Escherichia coli</i> K12	115
DONACHIE, W. D. and MASTERS, M. Evidence for polarity of chromosome replication in F ⁻ strains of <i>Escherichia coli</i>	119

No. 2 (October 1966)

CHAI, C. K. Selection for leukocyte counts in mice	page 125
CHAUHAN, N. S. and ROBERTSON, F. W. Quantitative inheritance of red eye pigment in <i>Drosophila melanogaster</i>	143
ROBERTSON, F. W. The ecological genetics of growth in <i>Drosophila</i> . 8. Adaptation to a new diet	165
ROBERTSON, F. W. A test of sexual isolation in <i>Drosophila</i>	181
SCAIFE, J. F-prime factor formation in <i>E. coli</i> K12	189
LYON, M. F. Lack of evidence that inactivation of the mouse X-chromosome is incomplete	197
LATTER, B. D. H. Selection for a threshold character in <i>Drosophila</i> . II. Homeostatic behaviour on relaxation of selection	205
SICCARDI, A. G. Colicin resistance associated with resistance factors in <i>Escherichia coli</i>	219
BATEMAN, N. Ovulation and post-ovulatory losses in strains of mice selected from large and small litters	229
COHEN, B. B. and BISHOP, J. O. Purification of argininosuccinase from <i>Neurospora</i> and comparison of some properties of the wild-type enzyme and an enzyme formed by inter-allelic complementation	243
CATTANACH, B. M. The location of Cattanach's translocation in the X-chromosome linkage of the mouse	253
NEI, M. and MURATA, M. Effective population size when fertility is inherited	257

No. 3 (December 1966)

VAN VALEN, L. and WEISS, R. Selection in natural populations. V. Indian rats (<i>Rattus Rattus</i>)	page 261
HILL, W. G. and ROBERTSON, A. The effect of linkage on limits to artificial selection	269
FLANAGAN, S. P. 'Nude', a new hairless gene with pleiotropic effects in the mouse	295
WEGLENSKI, P. Genetical analysis of proline mutants and their suppres- sors in <i>Aspergillus nidulans</i>	311
HOLLIDAY, R. Studies on mitotic gene conversion in <i>Ustilago</i>	323
DEOL, M. S. and GREEN, M. C. Snell's waltzer, a new mutation affecting behaviour and the inner ear in the mouse	339
ROBERTS, R. C. The limits to artificial selection for body weight in the mouse. I. The limits attained in earlier experiments	347
ROBERTS, R. C. The limits to artificial selection for body weight in the mouse. II. The genetic nature of the limits	361
VERRUSIO, A. C. and FRASER, F. C. Identity of mutant genes 'Shrivelled' and cataracta congenita subcapsularis in the mouse	377
<i>Index of subjects and authors</i>	379

PLATES should only be included where absolutely essential. They should be supplied as unmounted glossy prints; any lettering to be inserted on them is best indicated on a separate sketch. Please do not damage prints by writing heavily on their backs or by using paper clips.

DIAGRAMS should be about twice the size of the finished block, and the thickness of lines and size of points determined accordingly. They must be drawn in Indian ink on white Bristol Board or tracing linen; graph paper ruled in pale blue (but not other colours) is also acceptable. Lettering should be lightly inserted in soft pencil only, so that the printer can put in the finished lettering.

Legends to illustrations must be given on a separate sheet of paper. Each illustration must have the name of the author and figure number pencilled on the back. Plates and diagrams should be numbered separately and their position indicated on the typescript. It will hasten refereeing if a photograph of each diagram can be supplied with the carbon copy of the paper.

TABLES should each be typed on a separate sheet of paper and their approximate positions in the text indicated on the typescript. Each table should be numbered and carry an appropriate title. The table should be designed, whenever possible, to be printed in the normal orientation of the text. The data should be grouped so as to make the use of rules unnecessary. Vertical rules, in particular, are expensive to print, and will only be included at the Editor's discretion.

FOOTNOTES should be avoided where possible. They can often be incorporated into the text, in parentheses.

SYMBOLS. Italic letters should generally be adopted for both gene symbols and quantities in mathematical formulae. Bold letters add to printing costs, and should only be used where they are necessary to avoid confusion.

SPELLING should follow the *Concise Oxford Dictionary*.

REFERENCES should follow the normal usage in the journal. In the list of references at the end of the paper, titles of periodicals should be abbreviated according to the *World List of Scientific Periodicals* (fourth edition).

PROOFS. Two sets of single-sided page proofs, together with the typescript, of each paper will be sent to the author. The printers' marked proof should be returned after correction to the Executive Editor. Excessive alterations, other than corrections of printers' errors, may be disallowed or charged to the author. Correction should be made using the symbols in British Standard 1219: 1958, or its shortened version B.S. 1219C: 1958.

OFFPRINTS. Fifty offprints of each paper, including short papers, are provided free of charge. Additional offprints may be ordered on the form sent out with proofs, provided this is returned within seven days of receipt.
