The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR
LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgement must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1951) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks are provided free up to the limit of £10 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.

Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is four guineas sterling (U.S.A. \$13) post free, and is payable in advance.

9. Single copies will be on sale at 10s. od. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

United States of America

Orders for this *Journal* may be sent through local bookseller, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

**First clinical audiometer
to provide
100% accurate audiograms**

AMPLIVOX MODEL 82

world's most fully-developed clinical audiometer

It is now known that the disc type of earphone, used in conventional audiometers for air conduction testing and the application of masking noise, transfers the sound by bone conduction to the opposite ear at a level only 40 dB below the signal level. This means that up to 50% of audiograms taken at the present time with other audiometers may be invalid.

The Amplivox Model 82 Audiometer provides, for the first time, the means of taking accurate audiograms in cases of severe unilateral deafness through the provision of narrow band masking applied by insert earphone. This new masking technique is of special significance in bone conduction audiometry.

In addition to the exclusive narrow band masking feature, the Model 82 provides loudness balance test facilities, and *all* the other tests essential to proved pure tone audiometry.

'PETERS' NEW CLINIC AUDIOMETER

FOR PURE-TONE AND SPEECH

CONSIDER THESE FEATURES :

- A continuous frequency range with continuous automatic threshold compensation.
- Twin continuously variable attenuators accurate to 1 db.
- Narrow band masking of pure tones plus insert receiver.
- Manual or automatic completely silent interruption.
- Loudness Balance and Difference Limen Recruitment Tests.
- High Fidelity Speech Circuit with Accessories for Free Field Speech Audiometry.
- Full Spectrum of White Noise for Masking Speech.
- Completely Transistorised for reliability.

The Westrex Company Limited, who are leading suppliers of Deaf Education Equipment, have a nationwide servicing organisation. In the immediate future their engineers in the field will be co-operating in the speedy servicing of all "Peters" audiometers in Great Britain.

Write for a descriptive brochure giving full details of this magnificent instrument and ask for a demonstration from either :

THE MODERN WAY WITH EAR WAX

Only five drops of Cerumol are needed.
In 10—30 minutes the softened or disimpacted wax
can usually be removed with a probe tipped
with cotton wool, or by gentle syringing.

The results that have been obtained in hospitals
and general practices throughout the country
confirm that Cerumol is safe and reliable and is the
modern way of dealing with ear wax. It avoids
discomfort to the patient, inconvenience to the
doctor and saves time for everyone. Indeed, in most
cases patients can easily instil the drops themselves.
The loosened wax then runs out of its own accord
and further visits to the surgery are unnecessary.

CERUMOL

REGD. TRADE MARK

Active constituents per 100 ml: p-dichlorobenzene
B.P.C. 2 G., Benzocaine B.P. 2.7 G., Chlorbutol B.P.
5 G., Ol. Terebinth 10 ml.

Pack for surgery use—dropper vial. Basic
N.H.S. cost 2/8. Hospital Pack—2 oz. bottles.

Literature will be gladly supplied on request.

NO COST OR OBLIGATION!

**Appraise the New Zenith Portable
DIAGNOSTIC AUDIOMETER
on a 10-day professional trial**

ZENITH MODEL ZA-100T

- Listed by the American Academy of the O and O.
- Truly portable; 8½ lbs.
- Fully transistorized
- Battery powered
- Easy to operate
- Widely accepted in the U. S.

*Conduct the tests yourself or
let us make them for you—RIGHT IN YOUR OFFICE!*

Now . . . to acquaint you with the latest Zenith development in audiometers, we'll deliver the new Zenith ZA-100T to your office for your professional appraisal. Completely portable, fully transistorized and battery powered, the Zenith ZA-100T can be carried anywhere with ease . . . used anywhere for actual diagnostic testing of hearing loss.

Zenith ZA-100T offers top output accuracy; improved complex masking. Neat carrying case and handle. No tubes to replace. Batteries last up to 120 hours.

See for yourself, or let us show you how the ZA-100T performs these important clinical tests:

1. Pure tone air in either headphone
2. Pure tone air in either headphone with masking in the opposite headphone
3. Pure tone bone
4. Pure tone bone with masking in headphone
5. Audiometer Weber test
6. Audiometer Rinné test

*“Strike, but
hear me”*

Themistocles

And the reply was $\mu\alpha\rho\upsilon\delta\iota\alpha$ which is hardly surprising when you consider that in that helmet he could hardly have heard him anyway.

Fortunately, few, if any, patients wear Grecian helmets these days and most are delighted to have the name of an independent hearing aid consultant of impeccable reputation murmured tactfully into their ears.

Today more people than ever before can benefit from a carefully selected aid. But careful selection is important. INGRAMS, the Independent Suppliers, have twenty-six different makes – the largest selection in the country – for patients to choose from. Couple this with expert impartial advice and a high reputation and you have the reason why so many E.N.T. Specialists refer their patients to Ingrams.
