to L2 acquisition are found in the papers by Lewis Mukattash, Wolfgang Kühlwein, Kari Sajavaara, and Michael Sharwood Smith.

In conclusion, the volume contains a wealth of information on many aspects of CL. Nevertheless, what is lacking sometimes is a clear methodological statement as to the kind and extent of data used: at times claims of "universality" are made on the basis of one or two linguistic phenomena.

Although the contributions do not provide definitive answers to many problems connected with contrastive research, they certainly indicate that CL has a lot to offer to anyone interested in the comparison of linguistic systems, data, phenomena, or theories.

ERRATUM
At the end of Bert Peeters’ review of Pulman, Word Meaning and Belief CJL 30(2):228, the phrase “componential analysis and prototype semantics do not necessarily converge” should read as follows: “componential analysis and prototype semantics do not necessarily compete”.
