Experimental Agriculture publishes the results of original research from any source on the agronomy of field, plantation and herbage crops grown for human or animal food; for industrial purposes; and on systems of agricultural production, particularly in the warmer regions of the world. It is especially concerned with experimental work designed to explain agronomic results in biological and environmental terms. The journal publishes accounts of new experimental techniques, new methods of crop production and discusses problems in countries where production is developing rapidly. There are regular book reviews and occasional, often invited, reviews of research.

Seed Science Research is an international journal that publishes original papers, as well as reviews and opinion papers, dealing primarily with the fundamentals of seed research with emphasis on the physiology, biochemistry, molecular biology and ecology of seed development, dormancy and germination. The importance of seeds to propagation, food, biofuel and biodiversity is of increasing interest and therefore submissions on seed genetics, seed biotechnology, seed treatment and seedling establishment are especially encouraged if they are novel and ‘seed driven’.

CONTENTS

FORESIGHT PROJECT ON GLOBAL FOOD AND FARMING FUTURES

I. R. Crute and J. F. Muir Editorial: Improving the productivity and sustainability of terrestrial and aquatic food production systems: future perspectives 1

D. A. Hume, C. B. A. Whitelaw and A. L. Archibald The future of animal production: improving productivity and sustainability 9

J. M. Dunwell Crop biotechnology: prospects and opportunities 17

K. Kilham Integrated soil management – moving towards globally sustainable agriculture 29

R. J. Hodges, J. C. Buzby and B. Bennett Postharvest losses and waste in developed and less developed countries: opportunities to improve resource use 37

J. Gressel Global advances in weed management 47

W. Day Engineering advances for input reduction and systems management to meet the challenges of global food and farming futures 55

R. I. Perry Potential impacts of climate change on marine wild capture fisheries: an update 63

P. S. Carberry, S. E. Bruce, J. J. Walcott and B. A. Keating Innovation and productivity in dryland agriculture: a return-risk analysis for Australia 77

J. A. Lucas Advances in plant disease and pest management 91

M. W. Shirley, B. Charleston and D. P. King New opportunities to control livestock diseases in the post-genomics era 115

W. J. Davies, J. Zhang, J. Yang and I. C. Dodd Novel crop science to improve yield and resource use efficiency in water-limited agriculture 123

J. Bostock The application of science and technology development in shaping current and future aquaculture production systems 133

B. McAndrew and J. Napier Application of genetics and genomics to aquaculture development: current and future directions 143

H. de Zeeuw, R. Van Veenhuizen and M. Dubbelel The role of urban agriculture in building resilient cities in developing countries 153

Journal of Agricultural Science now accepts submissions via Manuscript Central.
