RESEARCH ARTICLES

219 Subjective Complaints of Cognitive Symptoms Are Related to Psychometric Findings of Memory Deficits in Patients with HIV-1 Infection  
E. Poutiainen and I. Elovaara

226 Freehand Drawing Impairments in Probable Alzheimer’s Disease  

236 Effect of Asymptomatic Carotid Artery Disease on Cognitive Outcome after Cardiopulmonary Bypass  
G. Vingerhoets, G. Van Nooten, and C. Jannes

240 Representations in Learning New Faces: Evidence from Prosopagnosia  
M.R. Polster and S.Z. Rapcsak

249 Mood and Global-Local Visual Processing  
M.R. Basso, B.K. Scheffft, M.D. Ris, and W.N. Dember

CASE STUDY

256 Near Drowning in Frigid Water: A Case Study of a 31-Year-Old Woman  
H.C.G. Huckabee, P.L. Craig, and J.M. Williams

BOOK REVIEWS

261 Review of: The Neurology of Thinking, by Frank Benson  
C.-W. Wallesch

262 Review of: Memory Systems 1994, Daniel L. Schacter and Endel Tulving (eds.), and Memory in the Cerebral Cortex: An Empirical Approach to Neural Networks in the Human and Nonhuman Primate, by Joaquin M. Fuster  
D.B. Howieson

NEW CAMBRIDGE BOOKS IN NEUROPSYCHOLOGY

Essential Psychopharmacology
Neuroscientific Basis and Practical Applications
Stephen M. Stahl
Covering both the neurobiology of drug action, and the range of psychiatric disorders and their treatments, this book will be an essential text for students, scientists, psychiatrists, and other mental health professionals. It provides an easily readable introduction to psychopharmacology and contains over 300 detailed, full-color pictures that are also available separately on slides.

56011-X Hardback $120.00
42620-0 Paperback $44.95
55438-1 Slide set $275.00

Psychopathology
The Evolving Science of Mental Disorder
Steven Matthyse, Francine Benes, Deborah Levy, and Jerome Kagan, Editors
From psychopathology's beginnings at a descriptive level—cataloging signs and symptoms—it has become a vigorous, mature, experimental field, making strides in both biological and psychological understanding. In this important volume, scholars review new data and provide recommendations for future research. Their collected work, celebrating the career of Professor Philip Holzman, is an up-to-date account of progress and discussion of major problems in psychopathology. This book covers neuroanatomical, developmental, cognitive and genetic research and theory as they relate to schizophrenia and other psychoses.

44469-1 Hardback $69.95

Cambridge Medical Reviews: Neurobiology and Psychiatry
Volume 3: Neuroimaging
Robert Kerwin, David Dawbarn, James McCulloch, and Carol Tamminga, Editors
The neurobiological basis of psychiatric disorder is a rapidly expanding field of study, primarily as the result of recent developments in the basic neurosciences. Neurobiology and Psychiatry serves as a regular forum for the evaluation and dissemination of information on this fundamental aspect of biological psychiatry. This the third in the series is devoted to the important role of and advances in neuroimaging within psychiatry. This series of up-to-date topic-oriented reviews of current research acts as an important information resource for all clinical and laboratory workers in the field.

Cambridge Medical Reviews: Neurobiology and Psychiatry 3
45365-8 Hardback $90.00

Neurotransmitter Release and its Modulation
Biochemical Mechanisms, Physiological Function and Clinical Relevance
David A. Powis and Stephen J. Bunn, Editors
A concise description of the basic mechanisms involved in neurotransmitter release modulation within the nervous system, including a quantitative evaluation of the significance of modulation, a summary of its biological ramifications, and potential clinical relevance.

"This is a well-conceived book...[it] provides important background information for the neuroscientist...goes full circle in combining both the basic principles of neurotransmitter function with the clinical relevance of neurotransmitter release in the nervous system."
—Mark S. Lues, Doody's Health Sciences Book Review Journal

44058-8 Hardback $115.00
44616-3 Paperback $49.95

Autoimmune Neurological Disease
Contributions from Neuroscience to Clinical Neurology
H. Bostock, P.A. Kirkwood, and P.A. Pullen, Editors
Demonstrating the value of interactions between neurology and the basic sciences that underpin it, this volume considers a range of topics from the points of view of both neurobiologist and clinician and reveals how advances in our understanding have been and continue to be made. The selected topics cover a wide range of levels of organization in the nervous system. For each one, distinguished researchers from around the world have made contributions, including general reviews of normal and pathological mechanisms as well as detailed accounts of the basic processes involved.

45132-9 Hardback $110.00

Animal Learning and Cognition
A Neural Network Approach
Nestor A. Schmajuk
In this advanced text, the author, starting with the simple assumption that psychological associations are represented by the strength of synaptic connections, describes several mechanistic descriptions of complex cognitive behaviors.

Problems in the Behavioral Sciences 16
45086-1 Hardback about $84.95
45696-7 Paperback $39.95
