From Space debris to asteroid strikes to anti-satellite weapons, humanity’s rapid expansion into Space raises major environmental, safety and security challenges. In this book, Michael Byers and Aaron Boley, an international lawyer and an astrophysicist, identify and interrogate these challenges and propose actionable solutions. They explore essential questions, from ‘How do we ensure that all of humanity benefits from the development of Space, and not just the world’s richest people?’ to ‘Is it possible to avoid war in Space?’ Byers and Boley explain the essential aspects of Space science, international law, and global governance in a fully transdisciplinary and highly accessible way. Addressing the latest and emerging developments in Space, they equip readers with the knowledge and tools to engage in current and critically important legal, policy and scientific debates concerning the future development of Space. This title is also available as Open Access on Cambridge Core.

Michael Byers holds the Canada Research Chair in Global Politics and International Law at the University of British Columbia. Professor Byers co-directs the Outer Space Institute, a global network of Space experts united by their commitment to transdisciplinary research that addresses grand challenges in the exploration and use of Space.

Aaron Boley holds the Canada Research Chair in Planetary Astronomy at the University of British Columbia. Professor Boley co-directs the Outer Space Institute and conducts research into planetary dynamics, astrophysical discs, meteoritics, artificial satellites and space sustainability.
Established in 1946, this series produces high quality, reflective and innovative scholarship in the field of public international law. It publishes works on international law that are of a theoretical, historical, cross-disciplinary or doctrinal nature. The series also welcomes books providing insights from private international law, comparative law and transnational studies which inform international legal thought and practice more generally.

The series seeks to publish views from diverse legal traditions and perspectives, and of any geographical origin. In this respect it invites studies offering regional perspectives on core problématiques of international law, and in the same vein, it appreciates contrasts and debates between diverging approaches. Accordingly, books offering new or less orthodox perspectives are very much welcome. Works of a generalist character are greatly valued and the series is also open to studies on specific areas, institutions or problems. Translations of the most outstanding works published in other languages are also considered.

After seventy years, Cambridge Studies in International and Comparative Law sets the standard for international legal scholarship and will continue to define the discipline as it evolves in the years to come.

Series Editors

Larissa van den Herik
Professor of Public International Law, Grotius Centre for International Legal Studies, Leiden University

Jean d’Aspremont
Professor of International Law, University of Manchester and Sciences Po Law School

A list of books in the series can be found at the end of this volume.
WHO OWNS OUTER SPACE?

International Law, Astrophysics and the Sustainable Development of Space

MICHAEL BYERS
University of British Columbia, Vancouver

AARON BOLEY
