The Journal of Laryngology and Otology

(FOUNDED in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

G. H. BATEMAN

ASSISTANT EDITOR

LIONEL TAYLOR

1. Original articles which have not been published elsewhere are invited and should be sent to the Editor. They are considered for publication on the understanding that they are contributed to this *Journal* solely. Reproduction elsewhere, in whole or in part, is not permitted without the previous written consent of the Author and Editor and the customary acknowledgment must be made.

2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs, etc.

The Harvard system of recording references should be used, e.g. GREEN, C., and BROWN, D. (1954) *J. Laryng.*, 65, 33. Abbreviations of Journals should follow the style recommended in *World Medical Periodicals*, published by World Health Organization, 1952.

It is most important that authors should verify *personally* the accuracy of every reference before submitting a paper for publication.

3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.

4. Illustration blocks are provided free up to the limit of £10 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.

Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to HEADLEY BROTHERS, 109 Kingsway, London, WC2.

5. Orders for reprints must be sent when returning galley proofs, and for this purpose special forms are supplied.

6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.

7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, WC2.

8. The annual subscription is five guineas sterling (U.S.A. \$15) post free, and payable in advance.

9. Single copies will be on sale at 12s. 6d. each; copies of parts up to Vol. LXIII which are available may be purchased at 7s. 6d. each.

10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2.

United States of America

Orders for this *Journal* may be sent through local booksellers, or to STECHERT-HAFNER, INC., 31-33 East 10th Street, New York, or direct to the publishers, HEADLEY BROTHERS, 109 KINGSWAY, LONDON, WC2, England.

The Hallpike Operating Headlamp

This Operating Headlamp is based on designs and experimental constructions by Mr. C. S. Hallpike, F.R.C.S., F.R.S., of the Otological Research Unit, Medical Research Council, at the National Hospital, Queen Square.

Its lightweight optical system incorporates a heat absorbing filter and projects a brilliant homogeneous circle of light which may be reduced by means of a built-in iris diaphragm.

Location of the reflector between the surgeon's eyes ensures that his visual axes lie close to the light beam, thus providing good optical penetration when working in narrow cavities. The light beam is adjustable for direction, and the carefully designed headband ensures perfect fit and comfort during long operations.

BÉKÉSY ACCESSORY

For the very first time a fully automatic unit is being made available for a Clinic Audiometer, making the combined units into a true BÉKÉSY Audiometer.

This automatic accessory is being made for the PETERS SPD/5 CLINIC AUDIOMETER, which has a continuous frequency range and continuously variable attenuation. The result is therefore a true Békésy audiometer.

It can be attached to or detached from the audiometer in under one minute so that the two units together offer the facilities of an advanced clinic audiometer or Békésy audiometry at will.

It can be fitted to any existing SPD/5 Audiometer.

Please write for full details and demonstration to :

Staphylococci cannot live with **Orbenin**

Regd.

Cells of Staphylococcus aureus (phage type 80), a typical penicillinase-producing organism, are illustrated before and after exposure to 10 µg/ml. of Orbenin (cloxacillin sodium). These photoelectron micrographs are magnified 25,000 times.

Orbenin (cloxacillin sodium B.P.) is one of the BRL semi-synthetic 'tailor-made' penicillins, developed specifically for the treatment of resistant staphylococcal infections. It has the two important qualities of penicillin, being bactericidal and of low toxicity. It is acid-stable and so can be given in the convenient oral form as well as by intramuscular injection, giving effective serum and tissue levels by either route.

Orbenin is also indicated in the treatment of mixed Gram-positive infections, as it is active against all Gram-positive bacteria normally sensitive to penicillin.

Availability: Capsules, syrup and vials for injection.

Orbenin is a product of British research at
Beecham Research Laboratories
Brentford, England. Telephone: ISLeworth 4111

If you have a patient who
cannot smell a rose . . .

the remedy may be

Otrivine®
C I B A

gentle nasal decongestant
exceptionally prolonged effect
rebound hyperaemia is not a problem

Otrivine is xylometazoline hydrochloride

3 forms	N.H.S. Price
Adult Drops 0.1% ½ fl. oz.	3/4
Adult Spray 0.1% ½ fl. oz.	3/4
Paediatric Drops 0.05% 10ml.	3/0
(with special safety dropper)	

'FRAGRANT CLOUD'

From early summer until the first hint of the autumn frosts, these coral-red flowers will float a cloud of fragrance throughout your garden. 'Fragrant Cloud' is a rare combination, it has healthy, vigorous growth, well shaped, free-flowering blooms, and, as its name implies, a heady, intoxicating scent. It's no wonder that 'Fragrant Cloud' was the only rose, out of 249 entries, to win the coveted Gold Medal of the National Rose Society.

'OTOSPORIN'

The modern method of treatment in otitis externa, chronic suppurative otitis media, and infected mastoid cavities, is 'Otosporin' Drops. 'Otosporin' is an aqueous suspension containing neomycin and polymyxin B which are together effective against practically all the bacteria found in ear infections. In addition, it contains hydrocortisone to reduce inflammation and swelling, thereby providing easier access for the antibiotics.

'OTOSPORIN' BRAND Drops ISSUED IN BOTTLES OF 5 ml.
