Notes for contributors

A submission to Applied Probability is considered as a submission to either Journal of Applied Probability (JAP) or Advances in Applied Probability (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author’s responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a **short abstract** of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of **keywords** detailing the contents; and (iii) a list of **classifications**, using the 2010 Mathematics Subject Classification scheme (http://www.ams.org/msc/). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the LATEX class file aptpub.cls, available from http://www.appliedprobability.org/. Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at https://mc.manuscriptcentral.com/apjournals. All submissions will be acknowledged on receipt.

**Copyright**

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see http://www.copyight.com) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

Research Papers

299 HÜSEYIN ACAN, ALAN FRIEZE AND BORIS PITTEL. Giant descendant trees, Matchings, and Independent sets in age-biased attachment graphs
325 RAMESH C. GUPTA AND S. N. U. A. KIRMANI. Log-concavity and other concepts of bivariate increasing failure rate distributions
338 ERHAN BAYRAKTAR, ERIK EKSTRÖM AND JIA GUO. Disorder detection with costly observations
350 GEORGIOS PSARRAKOS. How a probabilistic analogue of the mean value theorem yields stein-type covariance identities
366 QUANG HUY NGUYEN AND CHRISTIAN Y. ROBERT. Efficient conditional monte carlo simulations for the exponential integrals of Gaussian random fields
384 DAVID F. ANDERSON AND TUNG D. NGUYEN. Prevalence of deficiency-zero reaction networks in an Erdős–Rényi framework
399 THIERRY KLEIN, AGNÉS LAGNOUX AND PIERRE PETIT. Large-deviation results for triangular arrays of semiexponential random variables
421 VLADYSLAV BOHUN, ALEXANDER IKSANOV, ALEXANDER MARYNYCH AND BOHDAN RASHYTOV. Renewal theory for iterated perturbed random walks on a general branching process tree: intermediate generations
447 JIANHAI BAO, XING HUANG AND SHAO-QIN ZHANG. Convergence rate of the EM algorithm for SDEs with low regular drifts
471 SHUXIONG ZHANG. On large-deviation probabilities for the empirical distribution of branching random walks with heavy tails
495 SAM SPIRO. An averaging process on hypergraphs
505 MARC PEIGNÉ AND TAT DAT TRAN. On the asymptotic behavior of the Diaconis–Freedman chain in a multi-dimensional simplex
527 LEONIE VIOLETTA BRINKER AND HANSPESTER SCHMIDLI. Optimal discounted drawdowns in a diffusion approximation under proportional reinsurance
541 PIERRE HOUDEBERT AND ALEXANDER ZASS. An explicit Dobrushin uniqueness region for Gibbs point processes with repulsive interactions
556 YURI KABANOV AND NIKITA PUKHLYAKOV. Ruin probabilities with investments: smoothness, inegro-differential and ordinary differential equations, asymptotic behavior
571 SÖREN CHRISTENSEN AND SIMON FISCHER. On the $\frac{\text{Sn}}{n}$ problem
584 VICTOR DE LA PENA, PAUL DOUKHAN AND YAHIA SALHI. A Dynamic Taylor’s law
