ANNOUNCEMENT

In the normal course of events, and without editorial design, this issue of **Philosophy of Science** came to be devoted entirely to papers in philosophy of physics. This development encourages me to think that we might have success in arranging theme issues in other areas of philosophy of science. Accordingly, if acceptable papers are forthcoming, I will open the pages of the June 1984 issue entirely to papers in philosophy of biology. The theme will be interpreted broadly to include synthetic articles on the interrelations among biological (and perhaps other) sciences, studies of special sciences (developmental biology, ecology, immunology, neurobiology), and more traditional topics (the structure of evolutionary theory, reduction in genetics, the logical character of the principle of natural selection). The issue is open to all; no contributions will be especially solicited; and all submissions will be refereed in the normal manner. Papers should be submitted in accordance with the standard instructions printed on the inside back cover of this issue, and must be received by June 1, 1983.
