Corrigendum

Pathways from early adversity to later adjustment: Tests of the additive and bidirectional effects of executive control and diurnal cortisol in early childhood – CORRIGENDUM

Liliana J. Lengua, Stephanie F. Thompson, Lyndsey R. Moran, Maureen Zalewski, Erika J. Ruberry, Melanie R. Klein and Cara J. Kiff

doi: https://doi.org/10.1017/S0954579419000373. Published online by Cambridge University Press, 10 May 2019.

Keywords: adjustment, cumulative risk, early childhood executive control, hypothalamic–pituitary–adrenal axis, income

In Lengua et al. 2020, the slope factor loadings were incorrectly represented in figure 1. The loadings for executive control and diurnal cortisol were reversed. The correct figure 1 follows:

Figure 1. Model with standardized coefficients of the effects of income and cumulative risk on executive control and diurnal cortisol level, the bidirectional effects of executive control and diurnal cortisol, and their effects on children’s academic readiness, social competence, and adjustment problems. Effects of child gender were covaried but are not depicted. *p < .05.
