Development and Psychopathology strongly encourages contributions from a wide array of disciplines because an effective developmental approach to psychopathology necessitates a broad synthesis of knowledge. Manuscripts will be considered that address, for example, the causes and effects of genetic, neurobiological, biochemical, cognitive, or socioemotional factors in developmental processes with relevance to various risk or psychopathological conditions. The journal also seeks articles on the processes underlying the adaptive and maladaptive outcomes in populations at risk for psychopathology.

Manuscript Review Policy
Manuscripts will have a blind review by at least two scholars. Every effort will be made to notify authors within 90 days of submission concerning the reviewers’ recommendations and comments. Development and Psychopathology has no page charges.

Manuscript Submission and Review
All manuscript submissions to Development and Psychopathology must be made electronically via ScholarOne Manuscripts: http://mc.manuscriptcentral.com/dpp

Please follow the complete instructions on this website to avoid delays. The instructions will prompt the author to provide all necessary information, including the corresponding author’s contact information, which includes complete mailing address, phone and fax numbers, and an e-mail address. The website also requests suggested reviewers. The website will automatically acknowledge receipt of the manuscript and provide a manuscript reference number. The Editor-in-Chief will assign the manuscript to an Editor who will choose at least two other reviewers. Every effort will be made to provide the author with a rapid review. If the Editor requests that revisions be made to the manuscript before publication, a maximum of 3 months will be allowed for preparation of the revision. For additional information on the new online submission and review system, please read the Tutorial for Authors or the Tutorial for Reviewers available from ScholarOne Manuscripts.

Manuscript Preparation and Style
General. All manuscripts must be provided in MSWord or PDF format in 12-point type with 1-in. margins on all sides. The entire manuscript must be double-spaced and numbered consecutively. The language of publication is English.

Style and Manuscript Order. Follow the general style guidelines set forth in the Publication Manual of the American Psychological Association (5th ed.). The Editor may find it necessary to return manuscripts for reworking or retyping that do not conform to requirements. Do not use embedded references, end notes, or bookmarks. Manuscripts must be arranged in the following order:

Title Page (page 1). To facilitate blind review, all indication of authorship must be limited to this page; other pages must only show the short title plus page number at the top right. The title page should include the (a) full article title; (b) name and affiliations of all authors; (c) acknowledgments; (d) mailing address and telephone number of the corresponding author; (e) address of where to send offprints, if different from the corresponding author; and (f) a short title of less than 50 characters.

Acknowledgments (page 1). These should be placed below the affiliations. Use this section to indicate grant support, substantial assistance in the preparation of the article, or other author notes.

Abstract Page (page 2). Include (a) a full article title, (b) an abstract of no more than 200 words, and (c) up to five keywords for indexing and information retrieval.

Text (page 3). Use a standard paragraph indent. Do not hyphenate words at the ends of lines or justify right margins.

References. Bibliographic citations in the text must include the author’s last name and date of publication and may include page references. Examples of in-text citation style are Cicchetti (2002), Durston (2008, pp. 1133–1135), Hunt and Thomas (2008), (Hunt & Thomas, 2008), (Posner, Rothbart, Sheese, & Tang, 2007), and subsequently (Posner et al., 2007). If more than one, citations must be in alphabetical order. Every in-text citation must be included in the reference section; every reference must be cited in the text. Examples of reference styles:

Journal Article

Book

Chapter in an Edited Book

Appendix (optional). Use only if needed.

Tables. Tables must appear as a unit following the reference section. Each table should be typed double-spaced on a separate page, numbered consecutively with an Arabic numeral, and given a short title (e.g., Table 5. Comparisons on language variables). All tables must be cited in the text.

Figures. Figures must appear as a unit following the tables. Each figure must be numbered consecutively with an Arabic numeral and a descriptive legend. Legends must be provided separately from the artwork (e.g., Figure 3. The progress in language development). Figures, which are normally in black and white, should be no larger than 6 × 9 in. and placed within the manuscript file. If authors have print color figures, Cambridge will provide a price quotation for the cost to the author. Online-only color is provided free of cost. Diagrams must be computer generated. All labels and details must be clearly presented and large enough to remain legible at a 50% reduction. Artwork should be identified by figure number and short title. All figures must be cited in the text.

Copyediting and Page Proofs
The publisher reserves the right to copyedit manuscripts to conform to journal style. The corresponding author will receive page proofs for correction of typographical errors only. No rewriting of the original manuscript as submitted is allowed in the proof stage. Authors must return proofs to Cambridge within 48 hr of receipt or approval will be assumed.

Offprints
The corresponding author will receive a free high-quality PDF of his or her article. A form accompanying the page proofs allows the
corresponding author to order complete copies of the issue and/or pur-
chase offprints. All coauthor offprint requirements must be included on
this form. Orders received after the issue is printed are subject to a 50% 
reprint surcharge.

Copyright and Originality
It is a condition of publication that all manuscripts submitted to 
this journal have not been published and will not be simultaneously 
submitted or published elsewhere. All authors must sign the Transfer 
of Copyright Agreement, which is available from ScholarOne Manu-
scripts, before an article can be published. Government authors whose 
articles were created in the course of their employment must so certify 
in lieu of copyright transfer. Authors must obtain written permission 
from the copyright owners to reprint any previously published 
material included in their article and provide the permissions to Cam-
bridge University Press.
A transactional approach to preventing early childhood neglect: The Family Check-Up as a public health strategy

Mechanisms of change: Testing how preventative interventions impact psychological and physiological stress functioning in mothers in neglectful families
Child maltreatment, callous–unemotional traits, and defensive responding in high-risk children: An investigation of emotion-modulated startle response

Harsh parent–child conflict is associated with decreased anti-inflammatory gene expression and increased symptom severity in children with asthma

Posterior structural brain volumes differ in maltreated youth with and without chronic posttraumatic stress disorder

Long-term consequences of childhood maltreatment: Altered amygdala functional connectivity

Sex differences in socioemotional functioning, attentional bias, and gray matter volume in maltreated children: A multilevel investigation

Lower structural integrity of the uncinate fasciculus is associated with a history of child maltreatment and future psychological vulnerability to stress

Child maltreatment, impulsivity, and antisocial behavior in African American children: Moderation effects from a cumulative dopaminergic gene index

Childhood maltreatment and methylation of FK506 binding protein 5 gene (FKBP5)
Individual family, and culture level contributions to child physical abuse and neglect: A longitudinal study in nine countries

Multigenerational links between mothers’ experiences of autonomy in childhood and preschoolers’ respiratory sinus arrhythmia: Variations by maltreatment status

Intergenerational transmission of maltreatment: A multilevel examination

Multilevel prediction of physiological response to challenge: Interactions among child maltreatment, neighborhood crime, endothelial nitric oxide synthase gene (eNOS), and GABA(A) receptor subunit alpha-6 gene (GABRA6)

Developmental pathways from child maltreatment to adolescent marijuana dependence: Examining moderation by FK506 binding protein 5 gene (FKBP5)

Symptoms of major depressive disorder subsequent to adolescent marijuana dependence: Examining change across multiple levels of analysis to identify transdiagnostic risk pathways

Maternal elaborative reminiscing mediates the effect of neighborhood crime, endothelial nitric oxide synthase gene (eNOS), and GABA(A) receptor subunit alpha-6 gene (GABRA6) on adolescent marijuana dependence: Examining intracranial response to a taste challenge: Interactions among child maltreatment, neighborhood crime, endothelial nitric oxide synthase gene (eNOS), and GABA(A) receptor subunit alpha-6 gene (GABRA6)

Individual, family, and culture level contributions to child physical abuse and neglect: A longitudinal study in nine countries

Multigenerational links between mothers’ experiences of autonomy in childhood and preschoolers’ respiratory sinus arrhythmia: Variations by maltreatment status

Intergenerational transmission of maltreatment: A multilevel examination

Multilevel prediction of physiological response to challenge: Interactions among child maltreatment, neighborhood crime, endothelial nitric oxide synthase gene (eNOS), and GABA(A) receptor subunit alpha-6 gene (GABRA6)

Developmental pathways from child maltreatment to adolescent marijuana dependence: Examining moderation by FK506 binding protein 5 gene (FKBP5)

Symptoms of major depressive disorder subsequent to adolescent marijuana dependence: Examining change across multiple levels of analysis to identify transdiagnostic risk pathways

Maternal elaborative reminiscing mediates the effect of neighborhood crime, endothelial nitric oxide synthase gene (eNOS), and GABA(A) receptor subunit alpha-6 gene (GABRA6) on adolescent marijuana dependence: Examining intracranial response to a taste challenge: Interactions among child maltreatment, neighborhood crime, endothelial nitric oxide synthase gene (eNOS), and GABA(A) receptor subunit alpha-6 gene (GABRA6)
