OBITUARY.

HENDERICUS M. KLAASSEN, F.G.S.

BORN 1828.  DIED JANUARY 22, 1910.

We regret to record the death at Croydon, in his 81st year, of Mr. H. M. Klaassen. He was born at Kritzum in Hanover, where his father was the minister of the Dutch Reformed Church. After the ordinary school education in his native town he was trained for business, and in his twentieth year he came to England, and having gained experience he started on his own account as a seed factor on the London Corn Exchange in Mark Lane. The undertaking was successful, so that he was enabled to retire from business in 1874. He then followed his natural bent toward science, and attended the courses of lectures on Chemistry, Zoology, and Geology at University College, London. His predilection for this last-named science was greatly stimulated by John Morris, at that time Professor of Geology at the College, and he was induced to join the Geologists' Association in 1875, and was elected a Fellow of the Geological Society in 1877.

In 1883 Mr. Klaassen contributed a paper, "On a Section of the Lower London Tertiaries at Park Hill, Croydon," to the Proceedings of the Geologists' Association, in which a detailed description was given of the character of the beds and their fossils exposed in a deep cutting on the Woodside and South Croydon Railway. During the eighteen months the cutting was in progress Mr. Klaassen visited the work regularly every day, and thus secured a complete record of the beds exposed, and moreover he discovered some fossil bones which were described by Mr. E. T. Newton, F.R.S., as in part belonging to a new species of mammal which was named Coryphodon Croydonensis, and in part to a gigantic species of bird, larger than an ostrich, which received the name of Gastornis Klaasseni in honour of its discoverer.

A second paper by Mr. Klaassen, "On the Pebbly and Sandy Beds overlying the Woolwich and Reading Series on and near the Addington Hills, Surrey," was contributed to the Proc. Geol. Assoc. in 1890.

Mr. Klaassen was an earnest supporter of the Croydon Natural History and Microscopical Club, and he took a prominent part in founding a school in Croydon for the secondary education of girls in connexion with the Girls' Public Day School Company. Endowed with a genial temperament and sound judgment he won the regard of numerous friends, by whom his memory will be kindly cherished.

ROBERT MARCUS GUNN, M.A., F.R.C.S., F.G.S.

BORN 1850 (?1851).  DIED DECEMBER 2, 1909.

Mr. Gunn, who was a distinguished ophthalmic surgeon, had devoted his leisure during many years to the collection and study of fossils. Born at Dunnet, in Caithness, he belonged to the Clan Gunn, and was son of Marcus Gunn of Culgower, on the eastern coast of Sutherland.
