Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. High standards must be maintained in the design, experimental or theoretical, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editors.

Instructions for contributors
Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. High standards must be maintained in the design, experimental or theoretical, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editors.

Submission of manuscripts
Manuscripts for consideration by Robotica should be submitted electronically, using the Manuscript Central System, via http://mc.manuscriptcentral.com/cu/robotica. Authors are urged to ensure that their papers are written clearly and attractively, in order that they will be readily accessible to readers. Manuscripts must be written in English. Robotica employs a rigorous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor’s decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Layout of manuscripts
Text should be double-spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes of possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. Titles and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance for publication, authors will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Permissions
Permission should be sought from Cambridge or Elsevier. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Preparation of manuscripts
The preferred format for line drawings is black and white. Photographs should be clearly identified and numbered as for line drawings. All figures should have descriptive captions, and be mentioned in the text. A list of sources if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. Titles and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance for publication, authors will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Equations
Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be in Roman (upright) type should be marked clearly.

References
In the text, references are indicated by numerical Arabic numbers (with or without brackets), and should be confined to published works. Authors are required to prepare their own article title in full, in quotation marks, and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics.

Citations such as ‘personal communication,’ ‘unpublished work,’ etc., are not acceptable as references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading
The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to change authors for correction of any typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page change is made.

Offprints
No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

S636074_074e.indd 2 7/9/15 3:41 PM
Adaptive source search in a gradient field, Xiaochen Zhang, Yi Sun and Jiheng Xiao 1589
Active global localization based on localizability for mobile robots, Yong Wang, Weidong Chen, Jinchao Liang and Xiang Yang 1609
Trajectory tracking of a mini hexacopter helicopter in dynamic environments - a linear algebra approach, Chuanrui Ren, Yuanhong Lu, Chongxiao Jia, Nina Gao and Mingxiang Gao 1628
High-performance tracking of high-speed supercavitating vehicles with uncertain parameters using novel parameter-optimal adaptive learning control, Hassan Yanez-Arias and Ali-Akbar Ranjbar Noei 1653
Influence of backlash in gear reducer on dynamic of single-link manipulator arm, Jianwei Liu, Xiaoming Sun, Alexander F. Vaksinski and Lawrence A. Bergman 1671
Kinematic analysis and workspace determination of a novel 6-DOF parallel manipulator with a rotation-symmetric arm system, Mohammad Reza Chalak Qazani, Mohammad Ali Mahdian, Mostafa Soroush and Pejman Shokouh 1686
Infl uence of backlash in gear reducer on dynamic of single-link manipulator arm, Jianwei Liu, Xiaoming Sun, Alexander F. Vaksinski and Lawrence A. Bergman 1671
Screw theory based motion analysis for an inchworm-like climbing robot, Jianjun Yao, Shuang Gao, Guolin Jiang, Thomas L. Hill, Han Yu and Dong Shao 1704
Image-based robotic control with unknown camera parameters and joint velocities, Changchun Hua, Yingjie Liu and Yuan Yang 1718
Model-driven analysis and design for software development of autonomous underwater vehicles, Francisco J. Ortiz, Carlos C. Insaurralde, Diego Alonso, Francisco Sánchez and Yvan R. Petillot 1731
Line segment-based fast 3D plane extraction using nodding 2D laser rangefinder, Fuhong Ai, Lin-Kai Liang, Liu Li and S.J. Young 1751
Choice of handedness and automated suturing for anthropomorphic dual-arm surgical robots, Jienan Ding and Nabil Simaan 1775
