Systematic Parasitology

Editor-in-Chief:

Dr. D. I. Gibson, Dept. of Zoology, The Natural History Museum, London

Systematic Parasitology publishes papers on the systematics, taxonomy and nomenclature of the following groups: Nematoda (including plant-parasitic), Monogenea, Digenea, Cestoda, Acanthocephala, Aspidogastrea, Cestodaria, Arthropoda (parasitic copepods, hymenopterans, mites, ticks, etc.), Protozoa (parasitic groups), and parasitic genera in other groups, such as Mollusca, Turbellaria, etc.

Systematic Parasitology publishes fully illustrated research papers, brief communications, and fully illustrated major divisions.

In order to maintain high standards, all contributors describing new taxa are asked to state clearly where the holotype is deposited and to make paratypes available for examination by the referees. It is recognized that, in some cases, this may cause problems for the authors, but it is hoped that by adhering to this rule authors may be protected against rapid synonymization of their taxa, and the types will be preserved for posterity.

Systematic Parasitology is abstracted and/or indexed in Current Contents, Vital Notes on Medical Periodicals, Current Awareness in Biological Sciences, Bibliography of Agriculture (Agricola).

Parasite Immunology is an international journal devoted to research on parasite immunology in the general sense. Emphasis is placed on how hosts control parasites, and the immunopathological reactions which take place in the course of parasitic infections. The journal welcomes original work on all parasites: helminths, fungi, protozoa, ectoparasites, bacteria and viruses. Each issue covers the spectrum of parasite immunology through the original papers published, and through 'viewpoint' articles, designed to interest as well as instruct.

Subscription Information
Parasite Immunology is published bi-monthly. Subscription rates for 1991 are £165.00 (UK), £185.00 (overseas) and US$337.50 (USA & Canada) post free.
