# KEPLER PREPARATIONS.

## THE KEPLER EXTRACT OF MALT.

The many and varied conditions of disease in which the Kepler Extract of Malt as a food is indicated, and the benefits which are to be obtained from its use sufficiently explain the wide popularity it has attained. It is manufactured from barley and barley only, and our perfected machinery and long experience have enabled us to obtain a product containing all the nutritive principles of the grain intact. The main advantages of a good Malt Extract are that it is highly nutritious, readily assimilated and rich in that important factor diastase, which converts starchy food into maltose and other saccharine and easily digested substances. It is consequently an effective aid to digestion, and can be tolerated by the stomach when cod liver oil alone would be out of the question. Freedom from coarse and irritating elements makes it the safest aliment in inflammatory conditions of disease; it is an admirable demulcent in irritable states of the throat, and in debilitated conditions generally it is unrivalled.

Supplied to the Medical Profession in  $\frac{3}{4}$ lb. and  $1\frac{1}{2}$ lb. bottles at 1s. 8d. and 3s. each.

## THE KEPLER ESSENCE OF MALT.

In dietetics for the invalid, the Kepler Essence of Malt has already won its way to an enviable position, and has distinctly shown its superiority over all so-called nourishing stouts and ales as a food beverage. Its superior diastasic property, its palatable character, and its freedom from intoxicating qualities raise it at once far above the ordinary level of the very best and most carefully-prepared fermented mal liquors. We are assured by competent judges who have tried it in their clinics that two fluid ounces of the Kepler Malt Essence are equal in therapeutic value to a pint of the best stout or ale. This is a most important fact, to be kept well in mind when recommending or prescribing suitable diet for the dyspeptic, the ill-nourished, the sick or the convalescent. The Kepler Extract of Malt makes a pleasant beverage when mixed with aerated water and milk.

Supplied to the Medical Profession in champagne pints and quarts at 1s. 2d. and 2s. per bottle.

## THE KEPLER SOLUTION OF COD LIVER OIL IN EXTRACT OF MALT.

The Kepler Solution was the first preparation which represented a rational method of administering cod liver oil. When an oil is given alone, a considerable and prolonged digestive effort is required before assimilation is possible, and in not a few instances it is voided unchanged. Moreover, the digestion is generally soon deranged. The two problems which remained unsolved for so many years were: (1) How to cover the unpleasant taste of the oil; (2) how to increase its assimilability. Pharmacists tried every possible means to attain these ends, but since they lost sight of the fact that cod liver oil is a food, and treated it as a drug, they met with only partial success. In emulsions the taste was somewhat masked, but it was found that in the stomach the oil globules coalesced, and unpleasant and nauseating eructations resulted. In the Kepler Solution the oil is actually dissolved in Extract of Malt. It is not emulsified, and no oil globules are visible under the microscope. No unpleasant effects are produced when it is taken into the stomach, but it passes through the pylorus unaffected, and is readily absorbed by the lacteals.

Supplied to the Medical Profession in  $\frac{3}{4}$ lb. and  $1\frac{1}{2}$ lb. bottles at 1s. 8d. and 3s. each.
