# Which hand is more open to infection?

It's a toss up. The hand on the left may have just as good a chance of becoming infected or passing on infection as the hand with the obvious wound. Because irritation caused by constant handwashing may well mean open, inapparent lesions in the skin. If your skin is red, dry or itching, it's probably broken. In dozens of places too small to see.

Healthy, intact skin is the best protection against infection. That's why Huntington Laboratories created the Intact Skin Care group of products.

## Formulas that **are** easy on your hands, tough on germs.

Intact Skin Care products actually help make your hands feel softer and better with each use.

Some Intact Skin Care products have been formulated to kill pathogenic organisms and cleanse the skin without contributing to dryness or irritation, using proven **antibacterials** like alcohol and Triclosan. Emollients like aloe vera and lanolin to help skin retain its moisture. Humectants like glycerine to draw moisture from the air to the skin. Protein conditioners like keratin to help the skin repair its epidermal layer.

## One for every room in the hospital.

The Intact Skin Care line includes O/R Scrub for the demands of the surgical suite and other high risk areas. Bacti-Stat, an extraordinarily mild healthcare personnel hand wash. Derma Soft, our finest general purpose hand wash. Cida Rinse, a convenient, go-anywhere alcohol antiseptic handrinse. Accent Plus **cremes** and lotions. And a complete educational program on the importance of intact skin. Although your staff won't need much encouragement to use Intact Skin Care products.

For more information and trial samples, call your Huntington representative or call us toll-free:

# Here's one reason our gloves are the best in the business.

It's an independent thumb which helps reduce hand fatigue during surgery.

The **TriFlex**® patented mold design simulates the thumb's natural forward position, so our surgical gloves fit like they should. But that's only part of the story.

We start by in-house compounding our own latex to meet exact quality specifications. Then we dip our patented mold into it, and allow the excess latex to disperse over the back of the fingers, to maximize fingertip sensitivity. The mold also features tapered, waffled cuffs, which prevent glove **rolldown** without constriction.

The gloves are then wrapped in our new easy-to-open, color-coded and **heat-sealed** packaging. This innovative package virtually eliminates paper fracture in the O.R. Plus it's less permeable to ozone, which can damage gloves prior to use.

This uncompromising quality is made possible by our in-house manufacturing process. And quality is the ultimate assurance of your staff's protection.

Choose from three glove types: **Triflex**® regular surgeons gloves, **Triflex**® Low Powdered, for higher tear resistance and lower **particulates**, and **Ultraderm**®, for people sensitive to latex.

For more **information** on the most-used sterile surgical gloves in U.S. hospitals, contact your Pharmaseal Surgical sales representative, or write Baxter Healthcare Corporation, Operating Room Division, 1500 Waukegan Road, McGaw Park, IL 60085.

# 10 good reasons to warm up to a Cold Sterilant

- Ø Tuberculocidal in 10 minutes using the EPA quantitative method.
- Ø Proven effective against HIV (AIDS virus).
- Ø Pleasant lemon scent.
- Ø Gentle to use, lowest primary dermal irritation score (.34).
- Ø Two-year shelf life.
- Ø No activator required.
- Ø No need to heat to 77°F, effective at room temperature.
- Ø Approved 1:4 dilution for an economical .5% high level disinfection.
- Ø Won't fog or corrode fiberscopes-safe to use. Contains a corrosion inhibitor.
- Ø Longest re-use life of all disinfectants.

The fastest tuberculocidal and  
longest-lasting sterilizing/disinfecting  
solution available today.

**WAVICIDE®-01**
