The authors wish to correct a misprinted figure in the article Mass-gathering Health Research Foundational Theory: Part 1 - Population Models for Mass Gatherings in the December 2014 edition of Prehospital and Disaster Medicine.1 A draft file was inadvertently submitted with the published manuscript, in which the “penumbra” was accidentally misplaced around the patient population circle, rather than the event population circle. The authors apologize for this oversight and hope that it did not lead to any confusion.
