THE EFFICACY OF CHLORAPREP® IN TWO NEW APPLICATORS

ChloraPrep's new I0.5mL applicator features patented new tinting technology that adds color to the solution as it passes through the sponge. The patented ampulized applicator eliminates the risk of contamination, protects the CHG molecule from degradation, and ensures a 2-year shelf life.

The new ChloraPrep Swabstick provides significant improvement in performance over traditional swabsticks. It features a non-linting polyester polyurethane foam tip and a reinforced handle for friction application.

ChloraPrep, an FDA-approved patient preoperative skin prep, is the only 2% chlorhexidine / 70% alcohol-based antiseptic available which meets the CDC guidelines.

CDC guidelines for cutaneous antisepsis are based on a collection of clinical evidence indicating a significant reduction in infection when a 2% chlorhexidine-based antiseptic is used. A meta-analysis of independent clinical studies consistently demonstrates reduction rates of 50%.²

Visit chloraprep.com for directions on use of all ChloraPrep® products.
