TOWARDS A NEW EDITION OF JULIAN’S CONTRA GALILAEOS:
ASSESSING THE MATERIAL FROM THE SYRIAC TRANSMISSION OF CYRIL’S CONTRA IVLIANVM*

ABSTRACT
Emperor Julian’s three-book treatise Contra Galilaeos survives solely in those Christian sources that quoted it in order to respond to its forceful attack on Christianity. The bulk of these survivals comes from Cyril of Alexandria’s twenty-book Contra Julianum. The recent publication of the first modern critical edition of Cyril’s work creates the occasion for a fresh study of the remnants of Julian’s text that can be recovered from it. This is especially true for Books 11–20 of Cyril’s treatise that are themselves lost and survive only in quotations in later Greek and Syriac sources. The present article undertakes a reassessment of the Julianic material preserved via the Syriac transmission of Contra Julianum, including several passages hitherto unknown or ignored in earlier studies of Julian’s treatise. It provides the Syriac text and English translation of eight passages and contextualizes them in the wider argumentative aim of Contra Galilaeos.

Keywords: Julian; Cyril; Eusebius; Origen; star; martyrs; apologetic; genealogy

In the winter of 362/3, while making preparations in Antioch for his fateful invasion of Persia, Emperor Julian composed a three-book polemical treatise in which he aimed ‘to set before all humanity the reasons that persuaded [him] that the Galileans’ fraud [Christianity] is a human fabrication constructed with maliciousness’ (τὰς αἰτίας ἐκθέσθαι πάσιν ἀνθρώποις, ὡς ὧν ἐπείσθην ὅτι τῶν Γαλιλαίων ἡ σκευωρία πλάσμα ἐστίν ἀνθρώπων ὑπὸ κακούργησιν συντεθέν).1 Lost in the direct manuscript tradition, scattered traces of Julian’s text survive thanks to subsequent Christian refutations. The bulk of these survivals comes from Cyril of Alexandria’s Contra Julianum (henceforth, CI), which probably originally comprised twenty books and quoted lengthy verbatim extracts from Contra Galilaeos (henceforth, CG) in an effort to respond to the emperor’s arguments. Unfortunately, only half of Cyril’s own work has survived intact, with the latter ten books being preserved merely in later Greek and Syriac sources that cited passages from it for their own purposes. Fortunately, on

occasion these chance survivals preserve testimonia to, and even fragments from, Julian’s original text. The task of reconstituting and publishing the text of Julian’s CG is, therefore, largely dependent upon scholarly efforts to provide a reliable text for as much of Cyril’s lengthy refutation as we can recover.

PREVIOUS ATTEMPTS TO RECOVER JULIAN’S CONTRA GALILAEOS

Not until the eighteenth century were the fragments of Julian’s CG extracted from Cyril’s CI and published independently; in 1764 the Marquis d’Argens presented the Greek passages of Julian’s work cited by Cyril along with a French translation reissued in a lightly revised version four years later by Voltaire. The first properly critical edition was published by Neumann in 1880, who used Spanheim’s 1696 edition of Cyril’s CI for the passages from CG cited in Cyril’s first ten books and also included eighteen fragments he discovered in other sources. Neumann’s edition was largely reprinted in Wright’s Loeb volume in 1923. Both of these editions printed the passages extracted from Cyril’s first ten books as a continuously running text, which misleadingly gives the impression that we have a more or less complete text of much of Julian’s CG rather than a collection of fragments from a hostile source. Both of them also dispensed with testimonia, including only those extracts where Cyril cited Julian verbatim. These two defects were remedied in Masaracchia’s edition of CG in 1990, the primary basis for all subsequent scholarship. Ninety-four of Masaracchia’s one hundred and seven fragments derive from Cyril’s CI (frr. 1–89, 91, 96–9 Mas.), with the remainder coming from Jerome (frr. 90, 101, 102), Theodore of Mopsuestia (frr. 92–5, 100, 104–6), Photius (fr. 100), the Suda (fr. 103) and Arethas (fr. 107).

New remnants of Julian’s treatise have since been discovered in several sources. In 1994 Guida edited and translated the fragmentary remains of Theodore of Mopsuestia’s reply to Julian’s CG, including an appendix containing several new Julianic passages uncovered in the process. He followed this up with a study highlighting two more

3 K.J. Neumann, Iuliani imperatoris librorum contra Christianos quae supersunt. Collegit, recensuit, prolegomenis instructum C.I. Neumann. Insunt Cyrilli Alexandrini fragmenta syriaca ab Eberhaerdo Nestle edita (Leipzig, 1880); translated as K.J. Neumann, Kaiser Julians Bücher gegen die Christen (Leipzig, 1880). In addition to several fragments from the lost second decade of Cyril’s CI, Neumann also included passages from Jerome (frr. 1, 15, 16 Neumann [henceforth, Neu.]), Theodore of Mopsuestia (frr. 3–7), Photius (fr. 12) and the Suda (fr. 18).

6 A. Guida, Teodoro di Mopsuestia: Replica a Giuliano imperatore (Florence, 1994).
new testimonia and a new fragment of Julian’s lost work that are found in quotations of Cyril’s CI preserved in a later Chalcedonian florilegium. In 2006 Bianchi identified three testimonia to Julian’s CG preserved in homilies of the twelfth-century Italo-Greek monk Philagathos of Cerami. Two are new; one reports a Julianic criticism previously published as CG fr. 100 Mas. Following this discovery, Trovato published in 2012 what he regarded as another new fragment from Julian’s treatise, this one coming from the Enarratio in Evangelium Marci by Theophylact of Ohrid, although Riedweg has suggested that this passage is merely a testimonium to one of the same passages preserved by Philagathos. In 2018 Giavatto and Muller released a Greek–French edition of Julian’s CG, based on Masaracchia’s edition and adding some of the new passages that have come to light since 1990. Next, in 2020 Guida identified yet another unexpected testimonium to CG, this one in an early sixteenth-century work by Gian Francesco Pico della Mirandola. A final text containing remnants of Julian’s treatise has been identified but has yet to be properly published: an extended version of Ps.-Justin Martyr’s Quaestiones et responsiones ad Graecos, recently discovered by Toth, contains a section of text that seems to draw heavily upon the second decade of Cyril’s CI, containing two further fragments of Julian’s treatise that have not survived elsewhere.

A new edition of CG is needed for at least two reasons. First, scholarship on the text has advanced remarkably over the past three decades, with new fragments and testimonia appearing subsequent to Masaracchia’s 1990 edition. As a result, accessing the text as it is known today requires knowing where to find all the recently discovered Julianic material. Second, the years 2016–17 witnessed the publication of the first modern critical edition of Cyril’s CI, which has brought to light still more new Julianic material, of two different types. First, the first ten books of Cyril’s treatise may contain testimonia that have

8 N. Bianchi, ‘Nuovi frammenti del Contra Galilaeos di Giuliano (dalle omelie di Filagato da Cerami)’, BollClass 27 (2006), 89–104. C. Riedweg, ‘A German Renaissance humanist as predecessor & some further surprises: on the direct and indirect tradition of Cyril’s Contra Iulianum’, in G. Huber-Rebenich and S. Rebenich (edd.), Interreligiöse Konflikte im 4. und 5. Jahrhundert: Julian ‘Contra Galilaeos’ – Kyrill ‘Contra Iulianum’ (Berlin, 2020), 257–85, at 262 has proposed that the two new fragments be numbered CG frs. 100a and 100b. On the hypothesis that Cyril served as Philagathos’ unnamed source for this Julianic material, these passages were published as Cyril, CI frs. 72, 73, 74 Kin./Brü.
10 Riedweg (n. 8), 248 n. 16.
long lain in plain sight. For example, Cyril’s response to CG fr. 47 Mas. (quoted at CI 6.25.4–15) indicates that the dominical saying at Matthew 10:28 is an example of the kind of ‘harsh law’ that Christians have taken from Judaism (CI 6.27.11–15), alluded to but otherwise not specified in the quoted extract. A careful study of CI, taking into account a more sophisticated understanding of Cyril’s method of handling his source material, is needed to determine if more Julianic material can be recovered.15

A second tranche of Julianic material from the new edition of Cyril’s CI is fortunately more readily accessible. The editors have uncovered new Greek and Syriac fragments from the second decade of CI, several of which contain further testimonia to lost portions of Julian’s CG. The present article sets forth these new remnants surviving in Syriac sources and contextualizes them within the wider argumentative scope of Julian’s CG in so far as that can be determined.16 For the prolegomenon to Neumann’s 1880 edition of CG, Nestle edited and translated into Latin twenty-seven Syriac fragments from Cyril’s CI, of which fourteen derived from the lost Books 11–20. However, Neumann included only a few extracts from these fragments of CI in his edition of CG (specifically CG frr. 2, 8, 9, 10, 13 Neu.), even though several others that he excluded illuminate lost portions of Julian’s text. Masaracchia included even less Syriac material in her edition and printed merely a Latin translation, omitting the Syriac text altogether (CG frr. 91, 96, 97, 98 Mas.). In contrast, for the new GCS edition of Cyril’s CI, Hubert Kaufhold has edited fifty-five Syriac fragments, of which twenty-three come from the lost second decade.17

This recent reassessment and enlargement of our knowledge of the Syriac transmission of Cyril’s CI has laid the foundation for a fresh study of the traces of Julian’s CG preserved there, which the present article aims to provide.18 I propose that within these twenty-three fragments from CI Books 11–20 we can identify seven new testimonia to be added to Masaracchia’s edition and one expanded version of a fragment she already included.

15 Cf. S. Rebenich and H.-U. Wiemer, ‘Introduction: approaching Julian’, in S. Rebenich and H.-U. Wiemer (edd.), A Companion to Julian the Apostate (Leiden, 2020), 1–37, at 31: ‘What remains to be done is to produce an edition of the fragments of Julian’s treatise which takes into account the insights that have been reached by close study of Cyril’s text.’

17 Cf. the overview table of all the Syriac fragments in Kinzig and Brüggemann (n. 13), 840–3.

18 Riedweg (n. 8), 259–60 has already begun this process with respect to one passage from Cyril’s eighth book that survives in both Greek and Syriac. Although the Greek manuscript tradition unanimously reads φασι at CI 8.48.24, seeming to report an objection from unnamed pagan opponents, the quotation in this passage in the Syriac translation of Severus of Antioch’s Contra impium Grammaticum has the singular participle ἵκτος (‘he says’), explicitly attributing this objection to Julian in the opening editorial comment to the passage (page 868.6 Kaufhold). As a result, Riedweg proposes that the plural φασι be emended to the singular φασι and that the passage be added to the new fragments of Julian’s CG with the designation fr. 65a. This, however, seems too hasty a decision since there are other indications from the wider context that Cyril has in mind not just a single opponent in this section but a larger group of unnamed contemporary Hellenes (plural references at CI 8.46.1 οἱ δὲ ἑνναντίας, 8.50.2–3 παρὰ τοῖς Ἑλλήνων παύσα).
The question of how best to refer to these fragments of *CG* is complex. Masaracchia’s edition enumerated the fragments beginning with the first one cited by Cyril in *CI* and continuing to the last one cited in Book 10. Riedweg has proposed that the new fragments from Cyril’s second decade be numbered according to where they likely occurred in the course of Julian’s *CG*, ‘using mainly the narrative sequence of the gospels as an aid to orientation’, since the gospels seem to have been Julian’s main focus in his second book from which these passages presumably come. This, however, makes the current numbering system more complex, since it keeps Masaracchia’s existing enumeration but uses the addition of letters after the numbers to indicate the proposed location of new fragments (for example, designating one such passage *CG* fr. 91c since it presumably should have originally come after fr. 91b). To simplify matters, I number these new passages starting where Masaracchia left off, at 108, with the exception of the passage that is an expanded version of an already numbered fragment and a new fragment clearly related to it. When a full edition of the text is finally produced, its editors may decide to renumber these fragments according to their own scholarly judgements about the original sequence of *CG* and about how to manage the unwieldy and complex state in which it has reached us.

NEW FRAGMENTS

*CG* fr. 91 apud *CI* fr. 3a (page 878.2–7, 22–6 Kaufhold):

And, O friend of ours, what is so novel about the fact that in keeping with God’s will a star arose contrary to its normal pattern at that time when God the Word took on a body and it went ahead as a herald? Is it not the case that, owing to the occurrence of great events all throughout the world, there have often appeared those stars that are also called ‘comets’ or ‘in the form of beards’, though others also give them the name ‘meteors’? And this star was not one of those known stars, nor was it, as [Julian] claims, the daystar.

…

So then, this is how the marvel should be understood and it is worthy of being believed, even if that star did not remain until now. Moreover, it was not one of the stars that are known—not the daystar or Pleiades or Aldebaran. And even if it was standing over Bethlehem and over the house and over the place where the child was lying, one should not doubt the story.

---

19 Riedweg (n. 8), 260 n. 17.
20 Cf. Riedweg and Kinzig (n. 14), XCII, CV–CVIII. See also Julian’s allusions to topics he intends to treat later in *CG*, all of which pertain to Jesus and the gospels: *CG* fr. 50.3–4 Mas. (apud *CI* 6.42.7–8), fr. 51.3–5 Mas. (apud *CI* 7.1.14–15) and fr. 64.5–7 Mas. (apud *CI* 8.15.9–10), with the last passage referring explicitly to the δεύτερον σύγγραμμα of *CG*.
21 In his German translation, Kaufhold transliterates ὀδύς, seemingly reading initial ἀ as a preposition, and adds in brackets that perhaps this is meant to be ἀκοντισμός or ‘Sternschnuppen’ (‘shooting stars’). However, if ἀ is read as a part of the word rather than as a preposition, then the Syriac is simply a transliteration of δοκίδες, as also recognized by Nestle (Neumann [n. 3], 65; cf. Masaracchia [n. 5], 185). Hence, I translate the word as ‘meteors’. Cf. J. Payne Smith, *A Compendious Syriac Dictionary* (Oxford, 1903), s.v. ὀδύς.
22 All English translations from Syriac are mine, though I have consulted Kaufhold’s German translation of the Syriac fragments published in Kinzig and Brüggemann (n. 13), 761–818. I am also grateful for the comments on my initial draft translation offered by my research assistant Hannah Stork.
The first new fragment is an expanded version of a fragment published in Latin translation as fr. 91 Mas. This passage comes from a lengthy extract from Book 11 of Cyril’s CI included in a Syriac biblical catena surviving solely in the seventh-century lacunose MS British Library Add. 17214, which contains three extracts from Cyril’s treatise, alongside passages from mostly Greek patristic authors in addition to the Syriac writers Ephrem and Philoxenus. The passage above is found on fols. 38r–39r.

In the prolegomenon to Neumann’s edition of CG, Nestle designated the Syriac text of this passage as CI fr. 15 and the corresponding Latin translation as CI fr. 3. Neumann extracted one sentence from the Latin translation of the Cyril passage and published it as Julian, CG fr. 2 stella autem illa non ex numero harum ordinariarum erat neque ἑωσφόρος, ut iste [sc. Iulianus] eam dicit. Masaracchia kept the sentence highlighted by Neumann and added the preceding sentence to it to create her slightly lengthier CG fr. 91, in bold text above. I propose that the fragment, or rather testimonium, be expanding still further to include yet more of Cyril’s rebuttal that further illuminates Julian’s argument.

This passage focusses on the star of the magi and no doubt derives from Julian’s treatment of the birth narratives in the gospels early in his second book. Neumann probably isolated the sentence which he included as his fr. 2 because it seems to report Julian’s actual words (ut iste eam dicit = ἐωσφόρος, 24), specifically the claim that the magi’s star is to be identified with the daystar or Venus. Masaracchia’s additional sentence highlights the main point of Cyril’s response, namely that the star should be understood as some sort of more unusual or irregular celestial phenomenon such as a meteor or comet. However, if one takes into account the prior sentence, which was excluded by Masaracchia but is the first sentence of the testimonium offered here, we...

24 Neumann (n. 3), 52–3, 64–5, 234.
25 The lengthier Cyril extract from which Neumann and Masaracchia took their Julian fragments was partially cited by J.G. Cook, The Interpretation of the New Testament in Greco-Roman Paganism (Peabody, MA, 2002), 290, who also noted that Celsus commented on the story of the star, though Cook did not discuss Origen’s own view, which was followed by Eusebius and apparently opposed by Julian (see below).
gain a further glimpse into Julian’s argument. The direct address with which the passage opens, characteristic of Cyril’s style, implies that Julian objected to the story of the magi’s star on grounds that it was somehow ‘novel’ (δοκίδες). This emphasis on novelty is further elucidated in the latter portion of the extract printed above. Cyril’s defence of the account as plausible despite the star’s disappearance suggests that Julian had raised this point too, probably because an appearing and disappearing star would be a novel heavenly phenomenon that did not obey the normal laws of celestial motion. Finally, in the latter portion of the extract Cyril again opposes the view that the star was the daystar, Pleiades, or Aldebaran, all of these being known heavenly bodies which, as such, are not novel. Thus from Cyril’s rebuttal we surmise not only that Julian sought to identify the magi’s star with the daystar (as Neumann and Masaracchia recognized) but also that he seemingly thought it implausible that the star in question was a novel phenomenon previously unknown to astronomers which moved in a strange manner and disappeared once its mission was complete.

This fuller understanding of Julian’s argument is significant because he is apparently arguing against an interpretation of the star put forward by at least two earlier Christians. In his Contra Celsum, Origen proposed that the star was ‘a new star and not like any of the ordinary ones’ (καινὸν ... καὶ μὴ ἐν τοῖς συνηθῶσιν παραπλήσιον), and that it is ‘to be classed with the comets which occasionally occur, or meteors, or bearded or jar-shaped stars’ (κομήται ἢ δοκίδες ἢ πογιονία ἢ πίθοι). Origen then made precisely the same point as Cyril, namely that such phenomena often appeared at great moments of history, so it should not be surprising to find this occurring at the birth of Jesus. Eusebius, that fourth-century enthusiastic disciple of Origen, followed his predecessor on this question, asserting in his Demonstratio evangelica that the magi’s star was a ‘strange’ (ξένος) and ‘new’ (καινός) star akin to the ‘so-called comets or meteors or beard-shaped stars’ (κομητῶν, ἢ δοκίδων, ἢ πογιονίων) that have often appeared at the occurrence of unusual events. Thus the two most famous apologists for Christianity before Julian had argued that the star was a novel phenomenon that appeared for a specific time and then disappeared once its mission was complete, the very same position that Julian seems to have set himself against. In one of the other surviving verbatim fragments of his CG Julian, in fact, refers to Eusebius by name.

27 Orig. C. Cel. 1.58. Text from M. Borret, Origène. Contre Celse, Tome 1 (Paris, 1967), 236. Translation from H. Chadwick, Origen: Contra Celsum (Cambridge, 2003), 53. At C. Cel. 1.34 Origen noted that Celsus cited the passage about the Bethlehem star in Matthew but did not say how he interpreted it, so it is unclear whether his comments on this issue in this later passage respond to lost criticisms from his opponent. A precedent for Origen’s view is found in Clement of Alexandria’s report that the Valentinian Theodotus described the star as being ‘strange and new’ (ξένος ἢστηρ καὶ καινός) and as having ‘destroyed the ancient order of the stars’ (καταλύων τὴν παλαιὰν ἀστροφθείαν) (exc. Thdot. 4.74.2; text from R.P. Casey, The Excerpta ex Thedoto of Clement of Alexandria [London, 1934], 86).

28 Orig. C. Cel. 1.59.

and alludes to a passage from his *Praeparatio evangelica.*³⁰ It is, therefore, plausible that Julian learned of this interpretation of the magi’s star from his reading of Eusebius, and focussed his treatment of this gospel passage around critiquing the view of that earlier defender of Christianity, a pattern repeated below in CG fr. 111, though it cannot be excluded that he was responding to Origen instead of, or in addition to, Eusebius in light of the parallels between CG and *Contra Celsum* recently brought to light.³¹

Julian thus apparently opposed the idea that the magi’s star was a novel or irregular astrological phenomenon, as Origen and Eusebius had maintained, which is why Cyril felt the need to defend its plausibility, indeed normality, despite the fact that it moved in a strange fashion and did not remain in the sky.³² This insight comports with the felt the need to defend its plausibility, indeed normality, despite the fact that it moved in a strange fashion and did not remain in the sky.³² This insight comports with the sentence originally singled out by Neumann in which Cyril claims Julian said that the magi’s star was the daystar or Venus: Julian objected to the star as something novel or unusual, and identified it with, or at least compared it to, a known heavenly body. But why would Julian have referred specifically to the daystar in his criticism of Origen’s and Eusebius’ position? Answering this question moves into more speculative terrain but a conjecture can be offered. The fifth-century grammarian Servius reported that Varro claimed ‘the morning-star, which is said to belong to Venus, was continually seen by Aeneas until he should reach Laurentian territory and ceased to be visible after he arrived: from which fact he recognized that he had in fact arrived’ (*Varro enim ait hanc stellam Luciferi, quae Veneris dicitur, ab Aenea, donec ad Laurentem agrum ueniret, semper uisam, et postquam peruenit, uideri desisse: unde et peruenisse se agnouit*).³³

The parallels between this tradition and the story of the magi following the star westwards to Bethlehem have long been recognized,³⁴ and it could be that Julian himself deployed this similarity in his critique of the biblical account, which would be in keeping with other passages in the treatise that highlight traditions related to Rome’s founding and greatness (cf. CG frs. 42, 43, 44, 49 Mas.).

---

³⁰ CG fr. 53.7–11 Mas. referring to Euseb. PE 11.5.5 and 11.5.7. Cf. J. Bouffartigue, *L’empereur Julien et la culture de son temps* (Paris, 1992), 300, 384–9; Elm (n. 1), 305.

³² Cyril’s response to Julian is thus largely a reaffirmation of the view held by Origen and Eusebius (i.e. that the magi’s star was something like a comet), though with a denial that this meant it was something strange or novel as they had claimed.

A further *testimonium* from Varro yields more material relevant for reconstructing Julian’s argument. In the *De ciuitate Dei*, Augustine quotes a passage from Varro’s *De gente populi Romani* in which Varro passes on a report about Venus from the chronicler Castor who in turn was seemingly drawing upon the mathematicians Adrastus of Cyzicus and Dion of Neapolis. According to these sources, during the reign of King Ogyges, Venus ‘changed its colour, size, shape and course’ (*mutaret colorem, magnitudinem, figuram, cursum*). Moreover, this is said to have been ‘something that has never happened before or since’ (*quod factum ita neque antea nec postea sit*).35

Here we have a tradition about a known star changing its course which is said to be such an unusual event that it has never occurred subsequently. It seems unlikely to be a coincidence that the star in question is the daystar and that the same heavenly body somehow figured into Julian’s criticism of the supposed novel behaviour of the magi’s star. Perhaps his argument went something like this: ‘The only star known to have ever changed its course was, according to Castor, the daystar, so the story of the magi’s star in the gospels must have been fabricated in imitation of it.’ Even if somewhat speculative, this reconstruction of Julian’s argument would explain why Cyril in response would argue that the magi’s star should not be identified with any of the heavenly bodies known to astronomers.

Before leaving this fragment, we must comment on its relation to the fragment of *CG* published by Guida in 2020, found in Gian Francesco Pico della Mirandola’s treatise *De rerum praenotione* and numbered *CG* fr. 91a by Riedweg.36 Here Pico claims that Julian identified the magi’s guide with a star bearing the Egyptian name Asaph which appeared every four-hundred years.37 In other words, according to this *testimonium*, Julian said that the star was what we now today call a comet. As a precursor for this view, Guida points to the aforementioned passage from Origen’s *Contra Celsum* in which the Bethlehem star is said to be a ‘comet’ or ‘meteor’.38 It seems more likely that, as argued above, Julian’s argument was framed in opposition to the position of Origen and Eusebius. That is, even though Julian in this fragment seemingly agrees with Origen and Eusebius that the star was what we could call a ‘comet’, he rejected their claim that the object was a novelty and instead sought to identify it with a named astronomical phenomenon. The rejection of novelty is indeed the main point of continuity between *CG* fr. 91 and Guida’s new mysterious fragment. It could be that Julian mentioned several well-known heavenly bodies by name, not just the daystar, but perhaps also Pleiades and Aldebaran (also noted by Cyril in *CI* fr. 3a), as well as an otherwise unknown object called Asaph. There was debate in antiquity over whether comets were recurring heavenly phenomena or random unpredictable events; according to Pico’s *testimonium*, Julian took the view that they regularly appeared at set intervals, a position said to have originated amongst Pythagoras’ followers.39 If so, then even a rare event such as the appearance of a comet is something ordered and indeed eternal,

36 Riedweg (n. 8), 261.
37 Citing from Guida (n. 12), 98: ‘Sileant igitur astrologi, et obmutescat Iulianus Caesar impius ille desertor stellam eam aegyptiam blaterans nomine Asaph, videreque quadringentesimo quoque anno. Nusquam enim hoc proditum antea, nec post annos MCCCCC et tres, tot enim a salutifero Christi ortu praeterire, visa est: suo enim munere functa ab oculis mortalium prorsus evanuit, nec eius cursus cum syderibus aliiis conveniebat.’
38 Guida (n. 12), 100.
in contrast to the strange, new star proposed by Origen and Eusebius. Moreover, the four-hundred-year period mentioned in Guida’s new fragment fits nicely with Cyril’s defence of the disappearance of the star. One could imagine Julian saying that the account of the star of Bethlehem is unbelievable since the magi’s star did not remain in the sky, unless one were to suppose that it was the star Asaph which is only seen every four hundred years and so had not yet appeared when Julian was writing CG in 362/3. Unfortunately, no one has discovered the source of Pico’s testimonia; it could be a complete fabrication, though this seems unlikely given how closely related it is to the nexus of themes evident in CG fr. 91.

CG fr. 91b apud CI fr. 3b (page 879.7–9 Kaufhold):

But Julian the pagan said this story of the star is not true because none of the astrologers knew this star since it did not exist.

This is the first of three new testimonia to Julian’s CG preserved in the unpublished Commentary on Matthew of George of B’eltan, a Syrian Orthodox bishop educated in Greek and Syriac who died in 789/790. No testimonia from George’s commentary were included in the editions of Neumann/Nestle or Masaracchia; they first appeared in print in the new GCS edition of Cyril’s CI. George’s commentary survives solely in MS Vat. syr. 154, where the passage extracted as Cyril, CI fr. 3b Kin./Brü. is found on fol. 21v b and 22v b – 23r a. In this passage, George first discusses the timing of the star’s appearance and cites by name a work by John Chrysostom as well as Cyril’s CI (fol. 21v b). After some intervening material, George transitions to discussing the nature of the star, mentioning John, Cyril and Theodotus of Ancyra, though without naming specific works by these authors. The sentence referring to Julian follows immediately after this one on fol. 22v b.

Given his earlier naming of Cyril’s CI, we can be confident that George’s mention of Julian in this sentence depends upon that same source. Substantiating evidence is that, in his rebuttal of Julian, George repeats verbatim a sentence of Cyril’s own refutation in CI fr. 3a. Thus, George had no independent access to Julian’s text and was entirely reliant upon Cyril. What is more, there is good reason to think that George was drawing upon the same lacunose seventh-century biblical catena found in MS British Library Add. 17214 from which comes CI fr. 3a. In the catena, CI fr. 3a is sandwiched between an extract from the sixth of Chrysostom’s Homilies on Matthew (fol. 37r) and an extract from On the Nativity by Theodotus of Ancyra (fol. 39r), the same two texts also

40 Cf. Julian’s description of the eternal and unchanging heavenly bodies in CG fr. 11 apud CI 2.50.
41 On this passage, see Kinzig and Brüggemann (n. 13), 826–7.
mentioned by George when he discusses the nature of the star. The occurrence of these same sources in both the catena and George cannot be a coincidence; the most likely explanation is that George was using this catena, or one related to it, when composing his Commentary on Matthew, which would mean that George possibly had before him no more of the text of CI than we ourselves have in CI fr. 3a. The attribution of this objection to Julian appears in at least one later Syriac text. The twelfth-century bishop Dionysius bar Salibi, in his Commentary on the Gospels, also mentioned this Julianic argument, almost certainly drawn upon George’s earlier exposition since he repeats, at times verbatim, all three testimonia to Julian’s CG found in that earlier text.

George’s fragment does not repeat verbatim the criticism of Julian observed in the last passage but it does resonate with it. Although Cyril did not mention ‘astrologers’ as does George here, he did claim that the star was not a ‘known’ star; one could reasonably deduce that Julian objected to the notion that the star was unknown specifically to such experts. If so, then even though George’s reference to Julian’s speech is marked by the particle which might indicate a quotation, his testimonium would be entirely dependent upon the previous, being merely George’s own rephrasing of Cyril’s description of Julian’s position. It could be that George both drew upon this catena and had access to Cyril’s CI directly, so we must leave open the possibility that his statement does reflect Julian’s actual words cited by Cyril in an otherwise lost passage. Whatever the case, the position attributed to Julian by George coincides with the interpretation offered above for the previous fragment, namely that Julian objected to the view that the magi’s star was not one of the known heavenly bodies.

CG fr. 108 apud CI fr. 41 (page 889.18–20 Kaufhold):

Tell me then, how can you dare accuse [Christ] of disregarding those earlier people and allotting the calling and salvation through Christ to those who just lived in the last days?

This brief testimonium appears in the middle of a longer extract from Book 16 of Cyril’s CI that is preserved in a miaphysite florilegium titled ‘Proofs concerning the holy mysteries of the body and blood of our Saviour’, which survives in three British Library MSS: Add. 12155, fol. 81r; Add. 14532, fols. 79v–80r; and Add. 14538, fol. 115v. The first two manuscripts were used by Nestle in Neumann’s 1880 edition of Cyril’s Commentary on Matthew.

43 Cf. Wright (n. 23), 2.916–17; John Chrysostom, Hom. in Mt. 6.2 (PG 57.64); Theodotus of Ancyna, Hom. 1 (ACO 1.1.2, pages 87.33–88.3). I have consulted images of the manuscript to confirm Wright’s description.

44 The other main idea George attributes to Cyril, that the magi arrived no more than eight days after Jesus’ birth (CI fr. 3b [page 879.3–4 Kaufhold]), is also found in CI fr. 3a (page 878.20 Kaufhold).

45 Kinzig and Brüggemann (n. 13), 828; Guida (n. 12), 102 n. 52. For the relevant passage, see I. Sedlacek and I.-B. Chabot, Dionysii bar Salibi Commentarii in Evangelia (Louvain, 1960), 100–1 (Syriac text); I. Sedlacek and I.-B. Chabot, Dionysii bar Salibi Commentarii in Evangelia (Louvain, 1960), 75–6 (Latin translation).

46 Cf. Guida (n. 12), 101–2 n. 52 who says that George depends upon Cyril and ‘unduly simplifies’ (‘semplifica indebitamente’) Julian’s position.

47 Cf. Kinzig and Brüggemann (n. 13), 822.
CG, with the Syriac text of the Cyril fragment being published in the introductory section as CI fr. 25 and the corresponding Latin translation of the Syriac as CI fr. 34. However, Neumann did not include this passage in his critical edition of CG later in that publication, nor was it included in Masaracchia’s 1990 edition, despite Cyril’s response giving us a glimpse of Julian’s argument. Julian’s criticism must have been an attack on the problematic particularity of the divine revelation and salvation effected through Jesus, with him pointing out that Christianity seemingly offers little hope to those countless persons who lived before the time of the incarnation. This forms part of a larger theme in CG, as can be seen in fr. 20 Mas. (apud CI 3.46) in which Julian attacks the notion that God chose Israel as his special nation. The new fragment deriving from Book 16 of Cyril’s CI indicates that he revisited this theme in his treatment of the gospels in his second book, presenting the temporal particularity of the timing of the incarnation as being just as problematic as the ethnic particularity of God’s choice of Israel above all other nations, a criticism of Christianity also voiced by Porphyry.

CG fr. 109 apud CI fr. 43 (page 890.4–6 Kaufhold):
Thus, [Jesus] takes as an example the eye of a needle and a camel, not [meaning] the animal as the wicked, utterly foolish and idiotic Julian imagined, but instead the thick rope that is in every ship.

This passage comes from a catena on the Old and New Testaments made up of extracts from various Greek and Syriac biblical commentators, completed in 861 by a monk named Severus. It survives in three manuscripts, Vat. syr. 103 (fol. 326v), dated to the ninth or tenth century, and two manuscripts copied from it: Vat. syr. 283 (fol. 95v–v) and British Library Add. 12144 (fol. 200r). In the prolegomenon to Neumann’s 1880 edition of CG, Nestle included the Syriac text of this passage as CI fr. 21 and the Latin translation as CI fr. 29, but Neumann did not include it as a fragment or a testimonium in his edition of Julian’s CG; nor did Masaracchia, despite the fact that it does add, albeit slightly, to our knowledge of Julian’s treatise. The passage tells us that Julian at some point dealt with the dominical denunciation of wealth found in Matthew 19:24 / Mark 10:25 / Luke 18:25. Two centuries before Julian, Celsus raised this passage in his own polemic against Christianity, arguing that Jesus borrowed and corrupted this idea from Pl. Leg. 743a, though it is impossible to say whether Julian’s argument had anything in common with that of the earlier Platonist. Moreover,

48 Neumann (n. 3), frr. 25 (pages 61–2), 34 (pages 79–80).
50 Cf. Kinzig and Brüggemann (n. 13), 824, 836.
51 Neumann (n. 3), 56, 75.
52 Orig. Cels. 6.16.
the passage is treated as a problematic text requiring resolution in Macarius Magnes’ apologetic treatise, which must have been written close to the time of Julian.\textsuperscript{53}

We can surmise that Julian treated the passage in a dismissive or even mocking manner, probably pointing to the absurdity of a camel going through the eye of the needle, since this is the difficulty resolved in Cyril’s indignant reply. Such dismissive mockery is also what we find in Julian, \textit{CG} fr. 1 Bianchi (\textit{apud CI} fr. 72 Kin./Brü.), which points out that, because fishermen typically kill their prey, Jesus’ description of his disciples as ‘fishers of people’ (Luke 5:10 / Matthew 4:19) suggests that their ministry led to the destruction rather than the salvation of the people they caught. The two other passages Bianchi has highlighted from Philagathos are even more to the point, since they also attack Jesus’ impossibly high ethical standard, specifically the call to abandon wives for the sake of following Christ (\textit{CG} fr. 2 Bianchi \textit{apud CI} fr. 73 Kin./Brü., commenting upon Matthew 19:29 / Mark 10:29 / Luke 18:29–30) and the command to sell all one’s possessions, which, Julian points out, would be impossible to fulfil if everyone obeyed it (\textit{CG} fr. 3 Bianchi \textit{apud CI} fr. 74 Kin./Brü., commenting upon Matthew 19:21 / Mark 10:21 / Luke 18:22).\textsuperscript{54} Indeed, the saying about a camel passing through the eye of a needle comes from the same episode in the synoptics as these other passages, namely the story of the rich young ruler, so all of these fragments probably derive from the same section of the second book of \textit{CG}.\textsuperscript{55}

\textit{CG} fr. 110 \textit{apud CI} fr. 64b (page 890.16–17 Kaufhold):

\begin{quote}
From the eighteenth book by the same author. When Julian ridiculed Christians who honour the martyrs, [Cyril] opposed him as follows:

This brief \textit{testimonium} survives in the aforementioned miaphysite florilegium, in a single manuscript. British Library Add. 12155, fols. 87r–104r contains a unique section of fourteen numbered extracts that the scribe added to his Vorlage, and within it appear four unique citations from Books 16 and 18 of Cyril’s \textit{CI}.\textsuperscript{56} The \textit{testimonium} above is the heading added by the compiler for one of these passages which is found on fol. 101v. Neumann included the passage as \textit{CG} fr. 13, though Masaracchia omitted it from her edition.\textsuperscript{57} Unfortunately, it adds little to our knowledge of Julian’s \textit{CG},
\end{quote}

\textsuperscript{55} Julian similarly mocked the dominical command of poverty in \textit{Ep}. 115 as he took over the possessions of the church in Edessa.

\textsuperscript{56} Kinzig and Brüggemann (n. 13), 823; Wright (n. 23), 2,933. Kaufhold says that these pages contain ‘drei Zitate aus den Büchern 16 und 18 Kyrils’, though in his chart of fragments on pages 842–3 he lists four passages from this section: \textit{CI} fr. 39, 40b, 42, 64b.

\textsuperscript{57} Neumann (n. 3), 62–3 (\textit{CI} fr. 27 [Syriac]), 85–6 (\textit{CI} fr. 48 [Latin]), 237 (\textit{CG} fr. 13). Cf. Masaracchia (n. 5), 48.
since we already have extant other passages in which he mocks Christian devotion to the martyrs (cf. CG frs. 47; 81–2 apud CI 6.25; 10.11; 10.17).

CG fr. 111 apud CI fr. 75 (page 891.21–3 Kaufhold):

But Julian raised the following objection to this: if Luke recorded the legal genealogy, why does he call Obed the son of Boaz and not the son of Mahlon instead, since it was for Mahlon that Boaz, in accordance with the law, begot [Obed] by Ruth, whom he had taken in order to raise up a descendant for Mahlon?58

As noted above, this is one of three new fragments from Julian’s CG that are cited in George of B’eltan’s unpublished Commentary on Matthew found in MS Vat. syr. 154. Although George does not name Cyril as his source for this Julianic objection, the fact that he elsewhere explicitly cites from Cyril’s CI suggests that he was probably drawing upon it here too.59 Given the lacunose state of MS British Library Add. 17214, from which George probably drew CG fr. 91b, this testimonium may likewise derive from a fragment of Cyril’s CI included among the lost pages of that manuscript. At least three other Syriac authors also report this Julianic objection. Coming from the Church of the East, George’s contemporary Theodore bar Koni and the later commentator Isho’dad of Merv mention it, both of them probably reliant upon Theodore of Mopsuestia as their source.60 The passages from Theodore bar Koni and Isho’dad were published by Guida in the Appendix to his 1994 edition of Theodore of Mopsuestia’s Against Julian as Theodore of Mopsuestia, De Iul. test. 1.61 As mentioned above, Dionysius bar Salibi also repeats the objection, probably drawing upon George.62 In addition to these Syriac authors, Jerome also passed down a much simplified version of it, amounting to little more than asserting that Julian claimed the genealogies in Matthew and Luke contradicted one another (CG fr. 90 Mas. apud Jer. Comm. in Mt. 1.16). In response, Jerome pointed out that Eusebius and Africanus had already answered this problem.63 The Syriac tradition, however, represented by the above passage from George, preserves a fuller version of Julian’s critique that shows Jerome’s reply to be insufficient since Julian’s objection was already formulated as a response to the explanation offered by Africanus and Eusebius.

59 Cf. Kinzig and Brüggemann (n. 13), 827.
60 Cf. Theodore bar Koni, Memra 8.12; Isho’dad, Comm. in Mt. 1.15. Since it is attributed by Isho’dad to both Julian and Porphyry, Becker included this criticism in his edition of Porphyry’s Contra Christianos as fr. 54T. This could indicate that Porphyry first voiced this criticism and Julian took it from him, akin to the manner proposed for another passage from Isho’dad by J.G. Cook, ‘Julian and Porphyry on the resurrection of Jesus in the gospels’, International Journal of the Platonic Tradition 10 (2016), 193–207. However, it seems more likely that the mention of both figures together is a result of a tendency among later authors to conflate earlier sources.
61 As noted by Guida (n. 6), 199, in frs. 62.27–32, 64.5–6 Mas. (apud CI 8.2.18–23; 8.15.9–10), Julian announced that he would deal with problems related to Jesus’ genealogy when he came to his second book; the present fragment appears to be from that discussion.
62 Sedlacek and Chabot (n. 45), CSCO 15.58 (Syriac text); CSCO 16.43 (Latin translation).
63 Julian’s treatment of the gospel genealogies is also discussed in Boulnois (n. 31 [2014]), 108–10, though without reference to the passage above.
In both his well-known *Ecclesiastical History* and his less well-known but highly influential *Quaestiones evangelicae*, Eusebius solved the contradiction between the two genealogies of Jesus by endorsing the solution of Julius Africanus, who proposed that Matthew was recording Joseph’s biological lineage, Luke his legal lineage. On this line of reasoning, the two lines of descent diverged thanks to the ancient Israelite custom of Levirate marriage which obliged a man to marry a widow of a deceased relative and raise up descendants for the dead husband. Julian’s objection in the passage above only makes sense as a response to this explanation from Eusebius and Africanus. His corresponding objection would seem to be: ‘If Luke was recording the legal genealogy of Joseph, as Eusebius claims, why then did he not do so when he came to Obed’s father? For, while Boaz was Obed’s biological father, Mahlon was in fact his legal father in light of the fact that Boaz’s marriage to Ruth was an instance of Levirate marriage. Eusebius’ proposed solution is, therefore, false because Luke was in fact not recording legal descent, as demonstrated by his naming of Boaz as Obed’s father.’

Scholars have thus far seemingly not noticed that in this criticism Julian must have been responding to Eusebius, and recently Cook has argued that it is ‘unlikely’ that Julian would even have been aware of Eusebius’ ‘somewhat obscure text’ *Quaestiones evangelicae*. Cook proposes instead that Julian’s objections to the resurrection accounts, despite appearing similar to the problems Eusebius addressed in his *Quaestiones evangelicae*, were instead ‘probably inspired by one of Porphyry’s arguments’. I propose, on the contrary, that the above fragment all but proves that Julian must have been aware of either Eusebius’ *Ecclesiastical History* or his *Quaestiones evangelicae*, and that the latter is more likely to have been his source, in light of the similarities already identified by Cook between his criticisms of the resurrection accounts and the problems dealt with by Eusebius in that text. The present fragment is thus further evidence that Julian constructed his polemic against Christianity using Eusebius as his foil. Moreover, we should not miss the sophistication of Julian’s critique, which requires not merely understanding the complex solution proposed by Africanus and Eusebius but also knowing the obscure book of Ruth well enough to realize the problem it posed to their explanation.

CG fr. 112 apud CI fr. 76 (page 892.3–4 Kaufhold):

Julian here says, ‘Why, when frankincense was offered to Christ, do you yourselves not burn frankincense but a perfume compound instead?’

---

64 Euseb. *Hist. eccl.* 1.7.1–17; *Ad Stephanum* 4.
65 Cook (n. 61), 198.
66 Cook (n. 61), 204.
67 Julian’s possible dependence upon Eusebius’ *Quaestiones evangelicae* was raised in Boulnois (n. 31 [2014]), 108 n. 18, with further evidence in Boulnois (n. 31 [2021]). In the latter article Boulnois proposes that Julian focussed on Jesus’ divergent genealogies in response to Origen’s highlighting of Celsus’ silence on this point (*Cels.* 2.32). If so, then Julian was inspired by Origen to fill in the gaps of Celsus’ polemic but did so by responding to the solutions subsequently proffered by Eusebius.
68 Cf. Matt. 2.11.
Like CG frs. 91b and 111, this passage comes from George of B’eltan’s unpublished Commentary on Matthew. Because it alludes to the offering of frankincense to the infant Jesus, this criticism presumably derives from Julian’s treatment of the canonical infancy narratives.69 As with fr. 111, we can plausibly conjecture that Cyril’s CI was George’s unnamed source for this Julianic testimonium and that the passage of Cyril’s treatise upon which he drew may have been found among the lost portion of the catena in MS British Library Add. 17214.70 As noted above, Dionysius bar Salibi later repeats this Julianic objection, probably drawing upon George.71 This new passage is noteworthy for at least two reasons. First, while it is clear that Julian’s primary aim in CG was to undermine the sacred texts that served as the foundation for Christian belief, he also on occasion commented on Christian ritual practice, including denouncing the inefficacy of making the sign of the cross (CG fr. 43.11–13 Mas. apud CI 6.15.13–15), pointing out the inability of baptism to change a person’s moral state (CG fr. 59.16–23 Mas. apud CI 7.38.18–25), and claiming that devotion to the tombs of the martyrs involved defilement (CG fr. 81.3–14 apud CI 10.11.5–17). The present passage extends this motif by showing that Julian, rather surprisingly, also addressed the kind of incense used in the liturgy.

This leads to the second noteworthy aspect of this passage. Julian’s comment seemingly assumes that Christian rituals should be patterned after what one finds in the New Testament, specifically the offering of frankincense to Jesus by the magi. This could imply that, if Christians simply burned frankincense in their worship rather than the mixed compound that they currently use, their worship would be legitimate, or at least in harmony with ritual practice among other religious groups. It is difficult to discern how best to contextualize this seemingly positive remark given that elsewhere in CG Julian finds nothing about Christian ritual practice to endorse, consistently portraying them as having departed from the legitimate cultic practices of the Greeks, Romans and Jews. It could be that the comment was intended to contrast the practice of Jesus’ earliest followers in the New Testament with the corruptions that occurred later, as Julian elsewhere asserts (cf. CG fr. 79.5–8 Mas. apud CI 10.1.14–16). The passage might also be relying on an assumed deprecation of an incense compound concocted artificially by humans, perhaps seen as a debauched luxury, in contrast to the natural simplicity of frankincense as a material used for honouring the divine.72 Whatever the case, this passage from Julian is noteworthy as one of our earliest references to the burning of incense in Christian worship.73

CG fr. 113 apud CI fr. 77 (page 892.9–12 Kaufhold):

But the reprobate Julian, along with others, severely criticizes John at this point74 for having uttered an obvious falsehood with these words, since the world could record

69 Riedweg (n. 8), 261.
70 Cf. Kinzig and Brüggemann (n. 13), 827.
71 See Sedlacek and Chabot (n. 45), CSCO 15.109 (Syriac text); CSCO 16.81 (Latin translation).
72 Julian elsewhere refers positively to burning frankincense to the gods: Or. 2.23.32 (Bidez); 6.17.8 (Rochefort); Mis. 35.31 (Lacombrade); Ep. 98.41 (Bidez).
73 For an overview, see S. Ashbrook Harvey, Scenting Salvation: Ancient Christianity and the Olfactory Imagination (Berkeley, 2006), 75–83, who (writing before the publication of the fragment of Julian) says Egeria’s description of the Jerusalem liturgy c.381 ‘is the only mention of liturgical use [of incense] of which we can be certain at this early date’ (77).
74 The passage in view is John 21:25, which Isho’dad has just cited.
and narrate not only what Jesus did in three and a half years but also all the stories from the beginning [of time] until the present.

Although Isho’dad’s *Commentary on John* has long been available in both Syriac and English translations, the above passage citing Julian has only been taken into account in scholarship on Julian’s *CG* with the new edition of Cyril’s *CI*, which prints this as *CI* fr. 77. This is not the only time Isho’dad mentions Julian. As noted above, in his *Commentary on Matthew* he also has a version of *CG* fr. 111, which he attributes to both Julian and Porphyry. Although Julian alone is named in *CG* fr. 113 from his *Commentary on John*, Porphyry is perhaps to be understood as among the ‘others’ who have criticized this Johannine passage along with Julian. Isho’dad does not name *Contra Galilaeos* as the source for this criticism, but that is the most probable text from which it came, perhaps mediated via one of the lost books of the second decade of Cyril’s *CI*. While one could hardly describe the criticism of John 21:25 offered here by Julian as the kind of sophisticated critique of the gospels evident in *CG* fr. 111, it is nevertheless in keeping with his polemical approach elsewhere in *CG*. In the opening fragment of the treatise he claimed that by ‘exploiting that childish and senseless part of the soul that has a fondness for myths, [Christianity] gives its fairy tale the credibility of truth’ (ἀποχρησαμένη δὲ τῷ φιλομύθῳ και παιδαριώδει καὶ ἀνοήτω τῆς φυσῆς μορίῳ, τὴν περατολογίαν εἰς πίστιν ἄγηγον ἀληθείας). The hyperbole employed in John 21:25, which, as he points out, is patently false if taken literally, is probably precisely the kind of ‘fairy tale’ (περατολογία) he believed Christianity had used to deceive the senseless masses. Moreover, this criticism of John 21:25 put forth here in *CG* fr. 113 serves as a fitting complement to *CG* fr. 109 examined above, since in *CG* fr. 109 Julian seemingly mocked a passage that claimed God could do something obviously impossible (that is, pass a camel through the eye of a needle), while here in *CG* fr. 113 he points out that the gospels also present something as being impossible although in fact it is well within the realm of possibility (that is, writing enough books to recount all of Jesus’ deeds). The upshot of both criticisms is that the gospels are out of touch with reality and not to be trusted. If it is correct that Julian’s second book focussed on the four gospels and that he proceeded through them basically in sequence, then this objection in *CG* fr. 113 would come from the very end of his second book, focussing as it does on the final verse of the fourth gospel.

---

75 As noted by Kaufhold (Kinzig and Brüggemann [n. 13], 827 n. 32), the anonymous Syriac catena on the gospels in Ming. syr. 480 contains a version of this same criticism of the final verse of the fourth gospel, although it attributes it to both Julian and Porphyry. Cf. A. Mingana, *Catalogue of the Mingana Collection of Manuscripts* (Cambridge, 1933), 1.869; Porphyry, *Contra Christianos* fr. 113D (Becker).

76 Cf. Kinzig and Brüggemann (n. 13), 827.

77 Julian, *CG* fr. 1.4–6 Mas. *apud CI* 2.2.29–30. See also *CG* fr. 51.4 Mas. *apud CI* 7.1.14–15, where Julian says he intends, presumably in his second book, to ‘scrutinize the fairy tale of the gospels and their chicanery’ (περὶ τῶν εὐροτρόφων περατουργίας καὶ σκευοφορίας ἑξετάζειν).
CONCLUSION

The harvest of new knowledge from these fragments enriches our understanding of Julian’s *Contra Galilaeos* in several respects. First, it provides further evidence that Julian’s critique of Christianity engaged with the prior tradition of pagan polemic and Christian apologetic. In the most thorough study of Julian’s sources yet undertaken, Bouffartigue concluded that Julian knew Eusebius’ *Praeparatio evangelica* and at least Book 1 of his *Demonstratio evangelica*. More recently, Boulnois has raised the possibility that Julian was responding to Origen’s *Contra Celsum*. The above analysis of *CG* fr. 91 suggests that Julian was aware either of Origen’s treatment of the magi’s star in that text or of Eusebius’ similar discussion in *Demonstratio evangelica* Book 9. Moreover, *CG* fr. 111 proves that he was interacting with other texts in Eusebius’ corpus, most likely his *Quaestiones evangelicae*.

This leads to the second observation. Elm has recently described Julian’s treatise as ‘sophisticated’, and this is nowhere more apparent than in *CG* fr. 111, in which he identifies a significant problem in what was at the time the most widespread explanation for Jesus’ discordant genealogies and displays an impressive knowledge of obscure biblical texts. Nevertheless, this is but one aspect of Julian’s critique of the gospels. For alongside such incisive criticisms we also find comparatively simplistic objections in *CG* frs. 109 and 113, as well as *CG* fr. 1 Bianchi. Julian’s attack on the gospels seemingly was a mixture of both kinds of arguments. When combatting the interpretation of the gospels offered by a learned bishop such as Eusebius, Julian shows himself to be an equally sophisticated exegete. However, when addressing the stories in the gospels directly, he apparently thought mocking derision was the best way to show the falsity of what he regarded as trivial fairy tales.

Third, the preceding study answers questions about how Julian’s *CG* was received by the medieval Syriac tradition. These later authors were, at best, relying upon the refutations of Theodore of Mopsuestia and Cyril. However, it seems that often the chain of dependence was more complex. For example, Dionysius bar Salibi was perhaps drawing upon George of B’eltan when he reported three Julianic objections; and George himself was probably reliant, at least in part and maybe entirely, upon the anonymous florilegium of extracts in MS BL Add. 17214. Julian’s *CG* had a longer afterlife in the Syriac world than is often recognized, but there were multiple layers of mediation at work.

Finally, this study has highlighted the need for a new edition of Julian’s *Contra Galilaeos*. Knowledge of the text has grown considerably since Masaracchia’s 1990 edition and a comprehensive reassessment of our single most important source is now in order in light of the new GCS edition of Cyril’s *CI*. Once that has been completed, the new edition of Julian’s *CG* can join Becker’s 2016 edition of Porphyry’s *Contra Christianos*, and we will be positioned to undertake a fresh study of the development of anti-Christian polemic and Christian apologetic response over the course of Late Antiquity.
