ment of the pinna, neither was pain induced by pressure over the No vertigo. One of the retro-pharyngeal glands was enlarged. The nasal fossæ and pharynx of the corresponding side were hyperæmic. No improvement followed treatment, and towards the end of March the tissues covering the mastoid became suddenly swollen, the tumefaction extending up into the parietal region. The auricle was displaced and the retro-auricular groove obliterated; even now pressure over the mastoid did not induce pain; the trouble seemed glandular in origin. On March 28 paracentesis was performed; no pus present. auricular swelling went on increasing and fluctuation was present. On April 6 a large subperiosteal mastoid abscess was opened. After clearing away granulations and detritus from the purulent pocket the bone seemed healthy, so much so that the operator hesitated to proceed further. However, after consideration antrotomy was decided upon and carried out. Pus was found immediately under the cortex, and the bone intervening between it and the antrum was in a state of purulent osteitis. All the diseased tissue was removed with the curette, an uneventful course followed, and by the end of May there was a complete cure. Hearing returned, and the drumhead assumed its normal aspect.

In this case the usual symptoms of mastoiditis were absent. author remarks on the rarity of this form of mastoiditis and discusses the pathology of such cases, quoting Laimé's views as to their etiology. In this particular case he considers a latent mastoiditis was established two years previously during the attack of suppurative otitis above mentioned, and that this suddenly fulminated when the patient below par was subjected to the infection of influenza. H. Clauton Fox.

## THERAPEUTIC PREPARATIONS.

Burroughs Wellcome & Co., London, Sydney, and Cape Town.

"Tabloid" Laxative Fruit Pastilles. These pastilles present an efficient laxative in an exceptionally agreeable form and possess distinct advantages as an aperient preparation. Each pastille contains 5 gr. of extract of senna fruit in a suitably and pleasantly flavoured basis. The extract of senna fruit produces a gentle laxative effect without the griping and other discomfort associated with the administration of preparations of senna leaves. "Tabloid" Laxative Fruit Pastilles form an acceptable aperient, well suited to the needs of children and of ladies in a delicate state of health, when drastic purgatives are undesirable. As the aperient principle is excreted by the mammary gland, "Tabloid" Laxative Fruit  $\max_{i}$ be given to a nursing mother in order that its effect may be exercised upon the infant. One may be dissolved slowly in the mouth and repeated as necessary.

"Tabloid" Menthol and Eucalyptus Pastilles. Each contains: menthol gr.  $\frac{1}{20}$ ; oil of eucalyptus, min.  $\frac{1}{2}$ . An excellent combination for the treatment of infective, inflammatory, ulcerated, and catarrhal conditions of the mouth and throat. The "Tabloid" Pastilles present a pleasant and efficient means of treatment. They insure a prolonged application to the affected parts, of stimulating, anæsthetic, antiseptic, and deodorant principles in suitable solution, and are more convenient than the paints, sprays, and inhalations in ordinary use.

## INDEX TO VOLUME XXI, 1906.

Abductor paralysis, supplementary report on case of (G. L. Richards)	569 495
