Contents

PART 1 MARCH 1983

Hyperbolic behaviour of geodesic flows on manifolds with no focal points *K. Burns* 1

Positive Liapunov exponents and absolute continuity for maps of the interval *P. Collet and J.-P. Eckman* 13

Rigidity of lattices of non-positive curvature *P. Eberlein* 47

Bifurcation of an attracting invariant circle: a Denjoy attractor *G. R. Hall* 87

Characteristic exponents of dynamical systems in metric spaces *Y. Kifer* 119

On a construction of unitary cocycles and the representation theory of amenable groups *C. E. Sutherland* 129

Geometry of the Katok examples *W. Ziller* 135

Errata to 'A proof of Pesin's formula' *R. Mañé* 159

Book reviews 161

PART 2 JUNE 1983

Which groups act distally? *H. Abels* 167

Dynamical semigroups commuting with compact abelian actions *O. Bratteli and D. E. Evans* 187

On collective complete integrability according to the method of Thimm *V. Guillemin and S. Sternberg* 219

Bifurcation and chain recurrence *M. Hurley* 231

Flots topologiquement transitifs sur les surfaces compactes san bord: contrexemples à une conjecture de Katok *G. Levitt* 241

Hausdorff dimension for horseshoes *H. McCluskey and A. Manning* 251

The C^1 Closing Lemma, including Hamiltonians *C. C. Pugh and C. Robinson* 261

Periodic points of surface homeomorphisms with zero entropy *J. Smillie* 315

PART 3 SEPTEMBER 1983

A stochastic ergodic theorem for superadditive processes *M. A. Akcoglu and L. Sucheston* 335

The orbit of a Hölder continuous path under a hyperbolic toral automorphism *M. C. Irwin* 345

https://doi.org/10.1017/S014338570000208X Published online by Cambridge University Press

Entropy properties of rational endomorphisms of the Riemann sphere *M. Ju. Ljubich* 351

Constant-to-one and onto global maps of homomorphisms between strongly connected graphs *M. Nasu* 387

Croissance des boules et des géodésiques fermées dans les nilvariétés *P. Pansu* 415

Real analytic actions of SL(2, ℝ) on a surface *D. C. Stowe* 447

PART 4 DECEMBER 1983

Strong shift equivalence of 2×2 matrices of non-negative integers *K. A. Baker* 501

Geometry, electrostatic measure and orthogonal polynomials on Julia sets for polynomials *M. F. Barnsley, J. S. Geronimo and A. N. Harrington* 509

Homoclinic and non-wandering points for maps of the circle *L. Block, E. Coven, I. Mulvey and Z. Nitecki* 521

Stratification of the space of unimodal interval maps *L. Block and D. Hart* 533

Lower entropy factors of sofic systems *M. Boyle* 541

Structure de certains produits semi directs *A. Lamotte* 559

Persistence in expansive systems *J. Lewowicz* 567

Topological minimal self-joinings *N. G. Markley* 579

Flows associated with product type odometers *M. Osikawa* 601

Embedding some transformation group C^*-algebras into AF-algebras *M. V. Pimsner* 613

Immediate conditional hyperbolicity in dynamical systems *J. Rosenblatt and R. Swanson* 627

Index to Volume 3 649

THE PREPARATION OF TYPESCRIPTS

The attention of authors is particularly directed to the following requests:

1 *Typescript*

Papers should be typed, double-spaced, on one side of white paper (of which A4, 210 by 297 mm, is a suitable size). The pages must be numbered. Generous margins should be left at the side, top and bottom of each page. The copy sent must be clear.

A cover page should give the title, the author's name and institution, with the address to which mail is to be sent.

The title, while brief, must be informative (e.g. *A new proof of the ergodic theorem*, whereas *Some applications of a theorem of Birkhoff* would be useless).

The first paragraph or two should form a summary of the main theme of the paper, providing an abstract intelligible to mathematicians.

For a typescript to be accepted for publication, it must accord with the standard requirements of publishers, and be presented in a form in which the author's intentions regarding symbols etc. are clear to a printer (who is not a mathematician).

The following notes are intended to help the author in preparing the typescript. New authors may well enlist the help of senior colleagues, both as to the substance of their work and the details of setting it out correctly and attractively.

2 *Notation*

Notation should be chosen carefully so that mathematical operations are expressed with all possible neatness, to lighten the task of the compositor and reduce the chance of error.

For instance n_k (n sub k) is common usage, but avoid if possible using c sub n sub k. Fractions are generally best expressed by a solidus. Complicated exponentials like

$$\exp\{z^2 \sin\theta/(1+y^2)\}$$

should be shown in this and no other way.

In the typescript, italics, small capitals and capitals are specified by single, double and triple underlining. Bold-faced type is shown by wavy underlining; wavy will be printed **wavy**.

It helps if displayed equations or statements which will be quoted later are numbered in order on the right of their line. They can then be referred to by, for example, 'from (7)'.

The author must enable the printer (if necessary by pencilled notes in the margin) to distinguish between similar symbols such as o, O, o, O, 0; x, X, $\times$; ϕ, Φ, $\varnothing$; l, 1; ε, $\in$; κ, k.

Greek letters can be denoted by Gk in the margin.

If an author wishes to mark the end of the proof of a theorem, the sign □ may be used.

Footnotes should be avoided.

3 *Diagrams*

It is extremely helpful if diagrams are drawn in Indian ink on white card, faintly blue or green-lined graph paper, or tracing cloth or paper. *Symbols, legends and captions should be given on a transparent overlay.* Each text figure must be numbered as Figure 1, Figure 2, ... and its intended position clearly indicated in the typescript:

Figure 1 here

The author's name in pencil must be on all separate sheets of diagrams.

A figure is expensive to reproduce and should be included only when the subject matter demands it, or when it greatly clarifies the exposition.

The publisher recognizes that some authors do not have the facilities for producing drawings of a sufficiently high standard to be reproduced directly and is therefore willing to have such diagrams re-drawn, provided that they are clear.

4 *Tables*

Tables should be numbered (above the table) and set out on separate sheets. Indicate the position of each in the text as for figures:

Table 3 here

5 *References*

References should be collected at the end of the paper numbered in alphabetical order of the authors' names. A reference to a book should give the title, in italics, and then in roman type the publisher's name and the place and year of publication:

[4] N. Dunford & J. T. Schwartz *Linear Operators* Part I. Wiley: New York, 1958.

A reference to a paper should give in italics the title of the periodical, the number of the volume and year, and the beginning and end pages of the paper. Titles should be abbreviated as in *Mathematical Reviews*:

[6] J. E. Littlewood. The 'pits effect' for functions in the unit circle. *J. Analyse Math.* **23** (1970), 236–268.
