UNIVERSITY MATHEMATICAL TEXTS

General Editors

A L E X A N D E R C. A I T K E N, D.Sc., F.R.S.,  D A N I E L E. RUTHERFORD, D.Sc., DR. MATH.

The Series provides compact and inexpensive text-books on standard topics of mathematics, the aim being to carry the reader from an elementary or intermediate grade up to an honours grade in each subject.

Determinants and Matrices

Statistical Mathematics

The Series of Ordinary

Differential Equations

Waves

Electricity

Projective Geometry

Integration

Partial Differentiation

Infinite Series

Integration of Ordinary Differential Equations

Introduction to the Theory of Finite Groups

Analytical Geometry of Three Dimensions

A German-English Mathematical Vocabulary

Topology

Functions of a Complex Variable

Volume and Integral

Vector Methods

Classical Mechanics

Special Functions of Mathematical Physics and Chemistry

Tensor Calculus

Theory of Equations

OLIVER AND BOYD

EDINBURGH : TWEEDDALE COURT
LONDON : 39A WELBECK STREET, W.1
THE MATHEMATICS OF DIFFUSION
J. Crank
This book is written for those who are interested in the mathematical work which has been done in diffusion within the last ten years, and who wish to have the results of this and earlier work presented in a readily usable form. 50s. net

MATHEMATICAL ANALYSIS
D. A. Quadling
For the sixth-form mathematical specialist, this book makes the transition from methods of elementary calculus to those applicable to university courses on mathematical analysis. It is concerned only with functions of a real variable and remains essentially elementary, excluding such topics as uniform convergence, upper and lower limits, and the Heine-Borel theorem. 25s. net

ORDINARY NON-LINEAR DIFFERENTIAL EQUATIONS
IN ENGINEERING AND PHYSICAL SCIENCES
N. W. McLachlan
The first edition appeared in 1950. This second edition includes many additions. 35s. net

DIFFERENTIAL CALCULUS
W. L. Ferrar
There are many books on the calculus, both differential and integral, written primarily for study at school. The university demands a new point of view and it is to meet this demand that the present book has been written. 27s. 6d. net

THE PRINTING OF MATHEMATICS
AIDS FOR AUTHORS AND EDITORS AND RULES FOR COMPOSITORS AND READERS AT THE UNIVERSITY PRESS, OXFORD
T. W. Chaundy, P. R. Barrett and Charles Batey
This book is designed not only to help the printer, but also to assist authors to understand the technical problems which are peculiar to the composition of mathematics. 15s. net

AN INTRODUCTION TO LINEAR ALGEBRA
L. Mirsky
This book provides a systematic introductory account of linear algebra, designed to meet the needs of students reading for an honours degree in mathematics. No previous knowledge of the subject is assumed. 35s. net
