The Journal of 
Laryngology and Otology
(Founded in 1887 by Morell Mackenzie and Norris Wolfenden)

EDITED BY
WALTER HOWARTH

ASSISTANT EDITOR
G. H. BATEMAN

1. Original Articles are accepted on the condition that they have not been published elsewhere.
2. Manuscripts should be typewritten, on one side only of the paper, and well spaced. Captions to illustrations should be typed on a separate sheet and sent at the same time as original photographs etc.
3. The Harvard system of recording references should be used, e.g. Green, C., and Brown, D. (1941) J. Laryng., 65, 31. Abbreviations of Journals should follow the style recommended in World Medical Periodicals published by World Health Organization 1952.
4. It is most important that authors should verify personally the accuracy of every reference before submitting a paper for publication.
5. Engraver’s proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no extra matter added. Proofs should be returned within 5 days.
6. Illustration blocks are provided free up to the limit of £10 per article; beyond this authors are expected to pay half the cost. Coloured illustrations will be charged in full to authors.
7. Blocks will normally be held by the Printers for three years after which they will be destroyed. Any author who has borne a part of the cost of his blocks is entitled to have these returned to him, but a request for this must be sent within three years of the appearance of the article, to Headley Brothers Ltd., 109 Kingsway London, WC2.
8. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied.
9. Authors of original communications on Otological in other journals are invited to send a copy, or two reprints, to the Journal of Laryngology. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.
10. Editorial communications may be addressed to The Editor, Journal of Laryngology, c/o Headley Brothers Ltd., 109 Kingsway London, WC2.

Orders for this Journal may be sent through local bookseller, or to Stechert-Hafner, Inc., 31-33 East 10th Street, New York, or direct to the publishers, Headley Brothers Ltd., 109 Kingsway London, WC2, England.

When a hearing aid is advised...

...you may confidently recommend your patients to S. C. INGRAM

- They can try the different makes of hearing aids
- They get impartial advice on all makes of hearing aids
- Their personal needs are given individual and continued attention
- A full report on each fitting recommended is sent to the patient's ear specialist
- They can compare at one consultation the different makes one with another

S. C. INGRAM Independent Hearing Aid Consultant

On the approved List of the National Institute for the Deaf

In the treatment of **OTITIS**

The persistently discharging ear is a common problem and one which poses many difficulties in effective treatment. In many cases of chronic ear infection, bacteria and fungi can be isolated and treatment should, therefore, be aimed at eliminating both types of infection. ‘Otamidyl’ contains dibromopropamidine isethionate 0.15% w/v and diamidinodiphenylamine dihydrochloride 0.5% w/c in propylene glycol and is intended for topical application in the treatment of otitis externa and of chronic suppurative otitis media. The antibacterial and antifungal properties of these compounds are retained in the presence of pus, blood and tissue debris.

*Further information is available on request.*

In schools for the DEAF—multitone Telesonic
INDUCTION LOOP SYSTEM
brings new advantages

1 Can be installed in adjoining classrooms without risk of ‘spill over’.
2 Combines good hearing with complete freedom of movement.
   Unaffected by distance between pupil and teacher.
3 Clear speech at high amplification.
4 Any number of pupils may use the same installation.
5 The child can use the instrument as a normal hearing aid outside school.

The Kindergarten Class at the London Residential School for Jewish Deaf Children where
all classrooms have been installed with the Multitone Telesonic Induction Loop System

The removal of wax from the external auditory meatus has, in the past, normally entailed attendance by the patient for diagnosis and for the prescription of a suitable loosening agent, and a second attendance a few days later for syringing.

Now, by the use of Cerumol Ear Drops, wax can be removed in most cases at one visit. A few drops of Cerumol can be instilled into the ear and, while another patient is being attended to, the soft cerumen dissolves and the harder wax disimpacts. The wax can then be removed by gentle syringing or with cotton wool. The wax may even be found to run out of the ear on its own accord, in which case patients themselves may instil Cerumol at home, obviating further attendances.

Cerumol is anti-bacterial, non-irritating and harmless to the lining of the external auditory meatus or the tympanic membrane.

Cerumol is included in Category No. 4 of the M.O.H. classified list and may be prescribed on N.H.S. Form E.C.10.

If you wish to test for yourself and have not received recently a 10 c.c. vial please write or telephone direct to:
LABORATORIES FOR APPLIED BIOLOGY LTD.,
91, AMHURST PARK, LONDON, N.16 Tel.: STA 2252

PACKS For Surgery Use:
10 c.c. vial — separate dropper included
(Basic N.H.S. price 2/8)

For Hospital Use: 2 oz. and 10 oz. bottles.
INVALUABLE AIDS TO DIAGNOSIS

The range of the internationally known Peters audiometers is designed to meet all audiometric requirements, from those of a large Clinic to audiometric tests in schools.

In addition to a large speech audiometer for free-field work the range includes three pure-tone audiometers:

The SPD/2 Clinic Audiometer illustrated above, a most comprehensive instrument providing many facilities for advanced techniques.

The SPD/3 Consulting Audiometer designed to meet all normal audiometric needs.

The SPD/1 Portable (Basic Diagnostic) the most recent addition to the range, which ideally fills basic requirements in a portable form.

All three instruments offer a single zero reference level for all measurements, the Peters patented continuously variable attenuator and provision for simple speed audiometry. All are made to the same high standard, differing only in the facilities which they offer.

For the convenience of specialists all these instruments are available for demonstration at the Acouston Showrooms or, on request, at the specialist's consulting room or hospital.

POST-TONSILLETOLOGY COMFORT
Immediate pain relief—Speedier Convalescence

The pain of traumatized tissues following tonsillectomy, demands its own relief—and points the need for analgesia that quickly reaches the irritated area. Aspergum provides 'salivary analgesia' through the simple act of chewing—it brings pain-relieving acetylsalicylic acid into intimate and prolonged contact with the tonsillar region, seldom reached even intermittently by gargling. The rhythmic stimulation of muscular action also aids in relieving local spasticity & stiffness: more rapid tissue repair is promoted. Each pleasantly flavoured chewing gum tablet provides 34 grains acetylsalicylic acid, permitting frequent use. Particularly suitable for children.

Aspergum (Category 3)
for more than two decades a dependable and welcome aid to patient comfort
Ethically promoted in packages of 16 tablets and moisture proof bottles of 36 and 250

An outstanding accomplishment
in hearing aid design

Amplivox
"C" SERIES HEARING AIDS

FACILITIES
Individual fitting related to the Audiogram by means of selective compensation. Tone control giving low frequency attenuation combined with an overall response extending to 4000 c/s provides excellent speech discrimination in cases of perceptive deafness.
