

STUDIES IN SECOND LANGUAGE ACQUISITION

Information for Contributors

For guidelines and requirements regarding manuscript submission, please consult the *SSLA* website at <http://journals.cambridge.org/sla>. Click on the Journal Information tab which will lead you to Information for Contributors. Potential authors are advised that all manuscripts are internally reviewed for both content and formatting/style in order to determine their suitability for external evaluation.

Research Article. These manuscripts may be essays or empirical studies, either of which must be motivated by current theoretical issues in second and subsequent language acquisition or heritage language acquisition, including methodological issues in research design and issues related to the context of learning. Maximum length is 11,000 words all-inclusive (i.e., abstract, text, tables, figures, references, notes, and appendices intended for publication must all fall within the 10,000 word limit).

Research Report. These manuscripts are shorter empirical studies motivated by current theoretical issues in second and subsequent language acquisition or heritage language acquisition, including methodological issues in research design. Very often, these are narrowly focused studies or they present part of the results of a larger project in progress. The background and motivation sections are generally shorter than research articles. Maximum length is 6,000 words all-inclusive (i.e., abstract, text, tables, figures, references, notes, and appendices intended for publication must all fall within the 6,000 word limit).

Replication Study. These manuscripts are empirical studies that replicate the research design and methods of a previously published study, with or without changes. The study selected for replication should have impacted empirical and/or theoretical work relevant to SLA. Replications can be direct (exact, close, approximate) or conceptual, and should identify and motivate the study selected for replication as well as any changes made. The maximum length is 10,000 words all-inclusive (i.e., abstract, text, tables, figures, references, notes, and appendices intended for publication).

State-of-the-Scholarship Article. These manuscripts are essays that review the extant research on a particular theme or theoretical issue, offering a summary of findings and making critical observations on the research to date. Manuscripts in this category typically fall within the 10,000-word limit; however, longer manuscripts may be considered on a case-by-case basis.

Critical Commentary. These manuscripts are shorter essays (i.e., non-empirical) motivated by current theory and issues in second and subsequent language acquisition or heritage language acquisition, including methodological issues in research design and issues related to the context of learning. Maximum length is 6,000 words all-inclusive (i.e., abstract, text, tables, figures, references, notes, and appendices intended for publication must all fall within the 6,000 word limit).

Methods Forum. Recognizing the need to discuss and advance SLA research methods, these manuscripts seek to advance methodological understanding, training, and practices in the field. Submissions can be conceptual or empirical; we also encourage articles introducing novel techniques. All research paradigms, epistemologies, ontologies, and theoretical frameworks relevant to SLA are welcome. The target length is up to 10,000 words, although longer manuscripts will be considered with justification.

All manuscripts in all categories are peer reviewed and subject to the same high standards for publication in *SSLA*.

Studies in Second Language Acquisition

Volume 46 Number 2 May 2024

EDITORIAL

- Chatgpt in and for second language acquisition: A call for systematic research*
ZhaoHong Han 301–306

RESEARCH ARTICLES

- The validation crisis in the L2 motivational self system tradition*
Ali H. Al-Hoorie, Phil Hiver, and Yo In'nami 307–329
- Variability in heritage and second language writers' linguistic complexity: Roles of proficiency and motivational beliefs*
Janire Zalbidea 330–353

ERRATUM

- Variability in heritage and second language writers' linguistic complexity: Roles of proficiency and motivational beliefs – ERRATUM*
Janire Zalbidea 354–354

RESEARCH ARTICLE

- Usage events and constructional knowledge: A study of two variants of the introductory-it construction*
Sakol Suethanapornkul and Sarut Supasiraprapa 355–377

CORRIGENDUM

- Usage events and constructional knowledge: A study of two variants of the introductory-it construction – CORRIGENDUM*
Sakol Suethanapornkul and Sarut Supasiraprapa 378–378

RESEARCH ARTICLES

- Optimizing the input for learning of L2-specific constructions: The roles of Zipfian and balanced input, explicit rules and working memory*
Manuel F. Pulido 379–403
- The effectiveness of note taking through exposure to L2 input: A meta-analysis*
Zhouhan Jin and Stuart Webb 404–426
- The processing advantage of multiword sequences: A meta-analysis*
Wei Yi and Yanlu Zhong 427–452
- Mapping the predictive role of MLAT subtests for L2 achievement through regression commonality analysis*
Philip S. Dale and Richard L. Sparks 453–477
- Prosodic processing in sentences with 'only' in L1 and L2 English*
Rachida Ganga, Haoyan Ge, Marijn E. Struiksmas, Virginia Yip, and Aoju Chen 478–503
- L2 learning outcomes of a research-based digital app for Japanese children*
Hee Jin Bang, Eric Setoguchi, Alison Mackey, and Akiko Fujii 504–534

RESEARCH REPORTS

- Longitudinal development of second language utterance fluency, cognitive fluency, and their relationship*
Jimin Kahng 535–549
- Inhibitory and facilitative effects of lexical neighbors in spoken word recognition: The role of language experience*
Mona Roxana Botezatu and Dalia L. Garcia 550–563

REPLICATION STUDY

- Testing for proficiency effects and crosslinguistic influence in L2 processing: Filler-gap dependencies in L2 English by Jordanian-Arabic and Mandarin speakers*
Alaa Al-Maani, Shayne Sloggett, Nino Grillo, and Heather Marsden 564–580

METHODS FORUM

- Do verbal and nonverbal declarative memory tasks in second language research measure the same abilities?*
Phillip Hamrick, Christopher A. Was, and Yin Zhang 581–596
- When and how to use confirmatory composite analysis (CCA) in second language research*
Abdullah Alamer, Florian Schuberth, and Jörg Henseler 597–616
