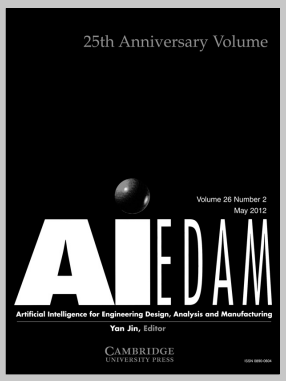
CAMBRIDGE JOURNALS

AI EDAM

Editor
David C. Brown, *Worcester Polytechnic Institute, USA*



AI EDAM is a journal for engineers and designers who see AI technologies as powerful means for solving difficult engineering problems; and for researchers in AI and computer science who are interested in applications of AI and in the theoretical issues that arise from such applications. The journal publishes original articles about significant theory and applications based on the most up-to-date research in all branches and phases of engineering. Suitable topics include: analysis and evaluation; selection; configuration and design; manufacturing and assembly; and concurrent engineering.

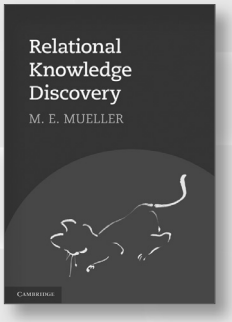
CAMBRIDGE

Outstanding Titles in Robotics!

Relational Knowledge Discovery

M. E. Müller

$99.00: Hb: 978-0-521-19021-3
$47.00: Pb: 978-0-521-12204-7:
288 pp.



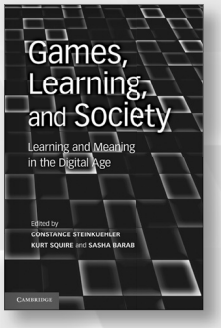
Games, Learning, and Society

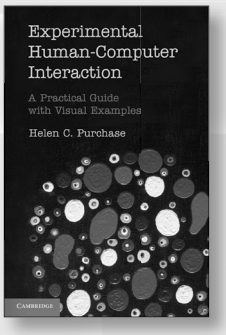
Learning and Meaning in the Digital Age

Edited by
Constance Steinkuehler, Kurt Squire, *and* Sasha Barab

Learning in Doing: Social, Cognitive and Computational Perspectives

$99.00: Hb: 978-0-521-19623-9
$36.99: Pb: 978-0-521-14452-0:
496 pp.



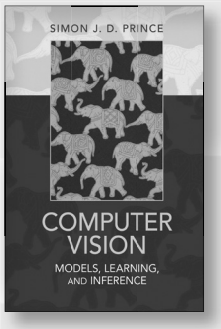


Experimental Human-Computer Interaction

A Practical Guide with Visual Examples

Helen C. Purchase

$110.00: Hb: 978-1-107-01006-2
$39.99: Pb: 978-0-521-27954-3:
272 pp.



Computer Vision

Models, Learning, and Inference

Simon J. D. Prince

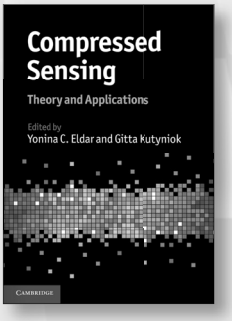
$90.00: Hb: 978-1-107-01179-3:
600 pp.

Compressed Sensing

Theory and Applications

Edited by
Yonina C. Eldar *and* Gitta Kutyniok

$99.00: Hb: 978-1-107-00558-7:
556 pp.



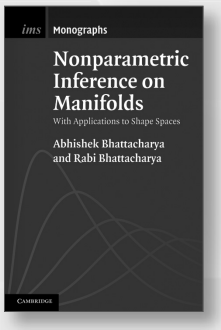
Nonparametric Inference on Manifolds

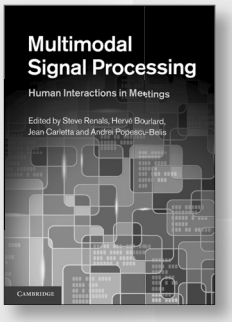
With Applications to Shape Spaces

Abhishek Bhattacharya *and* Rabi Bhattacharya

Institute of Mathematical Statistics Monographs

$80.00: Hb: 978-1-107-01958-4:
252 pp.



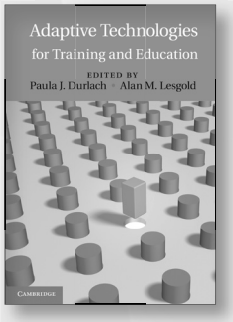


Multimodal Signal Processing

Human Interactions in Meetings

Edited by
Steve Renals, Hervé Bourlard, Jean Carletta, *and* Andrei Popescu-Belis

$120.00: Hb: 978-1-107-02229-4:
286 pp.



Adaptive Technologies for Training and Education

Edited by
Paula J. Durlach *and* Alan M. Lesgold

$99.00: Hb: 978-0-521-76903-7:
384 pp.

Prices subject to change.

Instructions for contributors

Robotica aims to be an outlet for publication of original papers of the highest quality in the field of Robotics and closely related areas. This includes: novel robotic mechanism and actuator design; robot kinematics, dynamics and control; computer vision; sensor fusion; teleoperation and haptic interfaces; robot motion planning; and artificial intelligence. In addition, papers that apply techniques from Robotics to other fields are also welcome. Examples include dynamics and control models applied to biological systems, the description of implementations of robots in factories, service and agricultural settings, and general mechatronic design. Works may be theoretical, computational or experimental, or some combination. Both short papers (rapid communications), and longer archival papers are welcome. Proposals for special issues on topics of current interest are welcome, and can be submitted via email to the editor.

Authors are urged to ensure that their papers are written clearly and attractively, in order that their work will be readily accessible to readers. Manuscripts must be written in English. *Robotica* employs a rigourous peer-review process whereby all submitted manuscripts are sent to recognized experts in their subjects for evaluation. The Editor's decision on the suitability of a manuscript for publication is final. Manuscripts, whether accepted or rejected, will not be returned to authors.

Submission of manuscripts

Manuscripts for consideration by Robotica should be submitted electronically, using the Manuscript Central System, via http://mc.manuscriptcentral.com/cup/robotica. This system will allow authors to benefit from faster review and earlier, online publication. The system will accept PDF files; most other files types will be automatically converted directly into PDF. Source files are required for any paper accepted for publication. Authors who are unable to submit online should contact the Editorial Office (gregc@jhu.edu) for assistance.

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Upon acceptance of a paper, the author will be asked to transfer copyright to the publisher. Authors are responsible for obtaining written permission from the copyright owners to reprint any previously published material included in their article.

Layout of manuscripts

Text should be double spaced throughout, on one side of the paper, allowing generous margins on all sides of the paper. Please avoid footnotes if possible. Papers should begin with an abstract of not more than 100 words and should end with a brief concluding section. The title and section headings should be concise and descriptive. All measurements should be given in SI units. On acceptance of a manuscript, authors are asked to send the electronic source file of the final version together with a PDF copy produced using the same file. The publisher reserves the right to typeset material by conventional means if an author's file proves unsatisfactory.

Illustrations

Figures should be composed to occupy a single column (80mm) or two columns (166mm) after reduction. The preferred format for figure files is .eps or .tiff at resolution 1200 dpi for lines, 600 dpi for greyscale and 300 dpi for colour (which preferably should also be in CMYK – cyan magenta yellow black – format). However, most standard image formats such as pct, ppm, png, psd, Word, ppt, CorelDraw, ChemDraw, AutoCAD can also be used, but not customized output of software not designed for publishing purposes such as Matlab, nor PDF. Figures to be printed in black and white must be submitted as black and white files.

Figures should be numbered consecutively, with Arabic numerals, have descriptive captions, and be mentioned in the text. A list of captions should be attached separately, and as far as possible, information relating to a figure should be placed in the caption rather than on the figure. Each figure should be clearly numbered. Photographs should be the same size as they will appear in the journal and should be selected to fit neatly into one column (80 mm) or two columns (166 mm). Photographs should be clearly identified and numbered as for line drawings.

Tables

Tables should be presented on separate sheets. A descriptive title should be given to each table. If possible, very wide tables should be avoided. Tables should be numbered consecutively in Roman numerals. Exceptionally lengthy tables may be summarized for publication with a note that fuller details can be obtained from the authors.

Equations

Mathematical equations should be typewritten, with subscripts and superscripts clearly indicated. All mathematical symbols will be set in italics unless otherwise indicated: symbols or letters to be set in Roman (upright) type should be marked clearly.

References

In the text, references are indicated by superior Arabic numbers (without brackets), and should be confined to published work that is directly pertinent. References should be listed at the end of the paper in numerical order. Authors' initials should precede their names: cited article titles should be quoted in full, enclosed in quotation marks; and abbreviations of journal names should follow the style of Chemical Abstracts or Physical Abstracts, and be underlined for italics:

P.W. Anderson, "More is different" *Science* **177**, 393-399 (1972); C.V. Negoita, *Fuzzy Systems* (Abacus Press. Tunbridge Wells, UK, 1980).

Citations such as 'personal communication', 'unpublished work', etc., are not acceptable as numbered references but can be included in parenthesis in the text. Do not use summaries as references.

Proof Reading

The corresponding author will receive PDF copies of page proofs for final proofreading. Only typographical or factual errors may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. Authors are requested to return proofs within 48 hours by airmail. No page charge is made.

Offprints

No paper offprints are provided, but the corresponding author will be sent the pdf of the published article. Print offprints may be purchased at extra cost at proof stage.

ROBOTICA

Volume **30** Part **5** September 2012

Robotic wheelchair controlled through a vision-based interface, **Elisa Perez, Carlos Soria, Oscar Nasisi, Teodiano Freire Bastos and Vicente Mut** 691

Design and control of a cable-controlled haptic motion simulator, **M. Karkoub, M-G. Her, C-C. Peng, C-C. Huang and M-I. Ho** 709

Dynamic task allocation in cooperative robot teams, **Athanasios Tsalatsanis, Ali Yalcin and Kimon. P. Valavanis** 721

Face salient points and eyes tracking for robust drowsiness detection, **J. Jimenez-Pinto and M. Torres-Torriti** 731

Recursive field estimation and tracking for autonomous manipulation, **Soo Jeon** 743

The coordinated motion planning of a dual-arm space robot for target capturing, **Wenfu Xu, Yu Liu and Yangsheng Xu** 755

Three-dimensional path planning for unmanned aerial vehicle based on linear programming, **Yang Chen, Jianda Han and Xingang Zhao** 773

Multiobjective optimization of parallel kinematic mechanisms by the genetic algorithms, **Ridha Kelaiaia, Olivier Company and Abdelouahab Zaatri** 783

Catadioptric panoramic stereovision for humanoid robots, **C. Salinas, H. Montes, G. Fernandez, P. Gonzalez de Santos and M. Armada** 799

Performance analysis of a human–robot collaborative target recognition system, **Y. Oren, A. Bechar and Y. Edan** 813

Digital platform-based multi-domain virtual prototype simulation on a high-speed parallel manipulator, **Yang Zhiyong, Feng Wenhao, Wu Jiang and Huang Tian** 827

Action sequencing using dynamic movement primitives, **Bojan Nemec and Aleš Ude** 837

Learning the forward kinematics behavior of a hybrid robot employing artificial neural networks, **Rongjie Kang, Hélène Chanal, Thomas Bonnemains, Sylvain Pateloup, David T. Branson III and Pascal Ray** 847

A diagram of the minimum necessary internal force required to resist external forces on two-point-grasped objects in two-dimensional space, **Satoshi Ito, Kohta Tanaka and Minoru Sasaki** 857
