

## Directions to Contributors - Concise Version

The *Proceedings of the Nutrition Society* publishes papers presented by invitation and original communications given at the symposia and meetings of the Society. The geographical scope of the journal is international. As a contributor you should note and follow the guidelines set out below. For further information on how the technical content of your paper should be presented please see the **Directions to Contributors** as reproduced in the first issue of a recent volume of *The Proceedings* (March), or contact the Editorial Office on +44 (0)171 371 6225 (telephone) or +44 (0)171 602 1756 (fax).

**Papers should be accompanied by a signed statement to the effect that the author accepts the conditions laid down in the full Directions to Contributors.**

Contributors of Symposium papers will be asked to assign their copyright, on certain conditions, to The Nutrition Society to help protect their material.

**Page format.** The *Proceedings* is printed in single-column format (column width of 135mm) with a text area of 135 x 203 mm.

**Text.** Papers should be typed, on one side of the paper only, with double line spacing and ample margins (at least 1.5 cm) on each side and with no underlining or bold in text except for scientific names. Draft-quality print from a word-processor is not acceptable. Standard abbreviations (e.g. Fig. and Figs) and SI units must be used. **When a paper has been accepted, word-processed text stored on floppy disk is encouraged, providing the software is IBM/DOS compatible, but floppy disks must be accompanied by a hard copy. This will enable papers to be handled rapidly, and with fewer typesetting errors.**

**Abstract.** Each paper must commence with a carefully prepared, accurate, informative abstract, in one paragraph, that is complete in itself and intelligible without reference to text or figures. It should not exceed 250 words. A short title of up to 45 characters should be provided as a running head.

**Key Words.** Authors should supply two or three key words or phrases (each containing up to three words) for the subject index of the volume.

**Tables.** Tables should be reduced to the simplest form, and should not be used where text or illustrations give the same information. They should be submitted on separate sheets at the end of the article and must fit conveniently into single-column or landscape (if absolutely necessary) format. Table captions should be typed on a separate sheet.

**Illustrations.** Copies only of artwork should be submitted. The original illustrations should accompany the paper after acceptance and revision. Text figures, line drawings, computer-generated figures and graphs should be of sufficient size and quality to allow for reduction by half or two-thirds. Half-tone photographs are acceptable where they are a real contribution to the text. Figure captions should be typed on a separate sheet and numbered corresponding to the relevant Figures.

**References.** References must be based on the name and year (Harvard) system; **give full journal titles** and conform to the following styles:

Bingham, S. A. & Cummings J. H. (1985). Urine nitrogen as an independent validity measure of dietary intake: a study of nitrogen balance in individuals consuming their normal diet. *American Journal of Clinical Nutrition* 42, 1276-1289.

Haraldsdottir, J. (1989). Dietary history. In *Manual on Methodology for Food Consumption Studies*, pp. 88-92 [M. E. Cameron and W. A. van Staveren, editors]. Oxford: Oxford University Press.

Underwood, E.J. (1977). *Trace Elements in Human and Animal Nutrition*, 5th ed. New York: Academic Press.

Citation of authors in the text should appear in the form: Polaszek (1990) or (Polaszek, 1990). More than one author should be cited in chronological order as: (Holloway *et al.* 1987; Walker & Huddleston, 1988).

**Proofs.** Two sets of page proofs will be provided to authors for checking; one set should be returned as promptly as possible to Dr I.E.Sambrook, Executive Editor, The Proceedings of the Nutrition Society, The Nutrition Society, 10 Cambridge Court, 210 Shepherds Bush Road, London W6 7NJ, UK.

**Manuscripts.** Three complete copies of the manuscript and artwork should be submitted to:

**Dr Kate Younger**

Contents

University of Aberdeen, 4–5 September 1996

Symposium on 'Regulation of nitrogen metabolism in farm animals'

Chairs: D. S. Parker, *University of Newcastle*; P. J. Buttery, *University of Nottingham*;  
M. A. Lomax, *University of Aberdeen*; J. C. MacRae, *Rowett, Aberdeen*;  
G. E. Lobley, *Rowett, Aberdeen*

Limits and limitations to nitrogen use in farm animals. <i>John D. Oldham, Gerry C. Emmans &amp; Ilias Kyriazakis</i>	525–534
Nitrogen metabolism in gastrointestinal tissue of the pig. <i>J. Van Der Meulen &amp; A. J. M. Jansman</i>	535–545
Regulation of hepatic nitrogen metabolism in ruminants. <i>G. E. Lobley &amp; G. D. Milano</i>	547–563
Nutrient–hormone signals regulating muscle protein turnover in pigs. <i>Bernard Sève &amp; Andrew A. Ponter</i>	565–580
Nutritional control of amino acid supply to the mammary gland during lactation in the pig. <i>Nathalie L. Trottier</i>	581–591
Amino acid supply and metabolism by the ruminant mammary gland. <i>Brian J. Bequette &amp; F. R. Colette Backwell</i>	593–605
Molecular mechanisms involved in the nutritional and hormonal regulation of growth in pigs. <i>John M. Brameld</i>	607–619
Immunological manipulation of growth. <i>J. M. Pell</i>	621–630
Modelling post-absorptive protein and amino acid metabolism in the ruminant. <i>Mark D. Hanigan, Jan Dijkstra, Walter J. J. Gerrits &amp; James France</i>	631–643
Mathematical modelling of nitrogen flow in growing pigs and lactating sows. <i>James E. Pettigrew</i>	645–656

Royal Society of Medicine, London, 15–16 October 1996

Symposium on 'Postprandial lipid metabolism'

Chairs: D. J. Betteridge, *Middlesex Hospital*; C. M. Williams, *University of Reading*;  
M. I. Gurr, *University of Reading*; M. A. Austin, *University of Washington, Seattle*

Postprandial lipid metabolism: an overview. <i>Richard J. Havel</i>	659–666
Triacylglycerol and coronary heart disease. <i>Melissa A. Austin</i>	667–670
Postprandial lipid metabolism in relation to coronary heart disease. <i>Fredrik Karpe</i>	671–678
Postprandial lipid metabolism: effects of dietary fatty acids. <i>Christine M. Williams</i>	679–692
