Causal Mechanisms of Behavioural Development
Jerry A. Hogan and Johan J. Bolhuis, Editors
Discusses all the significant conceptual and empirical advances in the study of behavioral development. It features the approach that learning is considered to be one process contributing to the development of the individual from conception to death.
1994 435 pp. 43241-3 Hardback $54.95

Functional Psychiatric Disorders of the Elderly
Edmond Chiu and David Ames, Editors
Provides a comprehensive reference and thorough practical guide to all the psychiatric disorders of the elderly not known to be caused by organic disease by covering neuroses, affective disorders, substance abuse, psychosexual disorders, schizophrenia, epidemiology, and treatment methods.
1994 650 pp. 43160-3 Hardback $100.00

Dementia and Normal Aging
Felicia A. Huppert, Carol Brayne, and D. W. O’Connor, Editors
Reviews the latest scientific research and seeks to establish whether dementia, particularly Alzheimer’s disease, is distinct from the normal aging process or on a continuum with normal aging.
1994 586 pp. 41393-1 Hardback $89.95

Mapping the Mind
Domain Specificity in Cognition and Culture
Lawrence A. Hirschfeld and Susan A. Gelman, Editors
Introduces a domain-specificity perspective of human thought by compiling a collection of essays exploring how several of these cognitive abilities are organized.
1994 530 pp. 41966-2 Hardback $64.95

Behavioral Expressions and Biosocial Bases of Sensation Seeking
Marvin Zuckerman
Describes the modes of assessment, behavioral expressions, and genetic and psychobiological bases that accompany the tendency to seek novel, varied, complex, and intense sensations and experiences and the willingness to take these risks for the sake of such experience.
1994 477 pp. 43200-6 Hardback $64.95
43770-9 Paperback $32.95

Stress, Risk, and Resilience in Children and Adolescents
Processes, Mechanisms, and Interventions
Robert J. Haggerty, Lonnie R. Sherrod, Norman Garmezy, and Michael Rutter, Editors
Recognizes the complexity of the developmental processes that influence coping and resilience and the importance of socio-cultural factors.
1994 441 pp. 44146-3 Hardback $49.95

Psychosocial Disturbances in Young People
Challenges for Prevention
Michael Rutter, Editor
Provides an overview of important areas in adolescence, ranging from delinquency to depression. Addresses key questions as to whether or not problems have multiple causes and what the influences of individual, family and societal factors are in the rise of problems.
1994 400 pp. 46187-1 Hardback $44.95

Psychosocial Processes and Health
A Reader
Andrew Steptoe and Jane Wardle, Editors
Assembles the most important articles regarding psychosocial processes and health of the past thirty years. The thirty-one articles are grouped around themes such as “Life stress, social support and health,” “Psychophysiological processes in diseases,” and “Behavioral interventions in medicine.”
1994 537 pp. 41610-8 Hardback $94.95
42618-9 Paperback $39.95

New edition...
Scientific Style and Format
The CBE Manual for Authors, Editors, and Publishers
Sixth Edition
Edward J. Huth
This detailed and authoritative manual is completely reorganized with coverage expanded to all sciences and with a new focus on general and scientific publication style and formats for science papers, journals, and books.
1994 782 pp. 47154-0 Hardback $34.95

Available in bookstores or from
CAMBRIDGE UNIVERSITY PRESS

40 West 20th Street, New York, NY 10011-4211.
Call toll-free 800-872-7423.
MasterCard/VISA accepted. Prices subject to change.
Photosensitive Epilepsy
New and Expanded Second Edition
Graham F.A. Harding and Peter M. Jeavons
Includes details of many recent studies including drug therapy and the genetics of photosensitivity and also looks at the long term prognosis for therapy.
Clinics in Developmental Medicine 133
1995 192 pp. 1898-68302-6 Hardback $59.95

Clinical Child Neuropsychiatry
Christopher Gillberg
A unique interdisciplinary examination of neurobiology, pharmacology, epidemiology and neuropsychology comprise this comprehensive reference to clinical assessment and treatment of the many neuropsychiatric disorders of childhood that at a conservative estimate affect five percent of all children.
1995 384 pp. 43388-6 Hardback $79.95

Social Support and Psychiatric Disorder
Research Findings and Guidelines for Clinical Practice
T. S. Brugha, Editor
Looks at the social dimensions of mental illness, and collates and critically examines the information currently available on social support as it interacts with mental health.
Studies in Social and Community Psychiatry
1995 c.400 pp. 44238-9 Hardback $79.95

Genius
The Natural History of Creativity
Hans Eysenck
Presents a novel theory of genius and creativity that is based on the personality of characteristics of creative persons and geniuses considering the role of intelligence, social status, gender, and many other factors that have been linked with genius.
Problems in the Behavioral Sciences 12
1995 354 pp. 48014-0 Hardback $69.95
48508-8 Paperback $27.95

Akathisia and Restless Legs
Perminder Sachdev
The first comprehensive account of the scientific and clinical aspects of akathisia and related syndromes such as restless legs syndrome (RLS), other forms of motor restlessness, and neuroleptic-induced dysphoria focusing on drug-induced akathisia and its various subtypes.
1995 439 pp. 44426-8 Hardback $69.95

Cambridge Medical Reviews: Neurobiology and Psychiatry
Volume 3: Neuroimaging
Robert Kerwin, David Dawbarn, James McCulloch, and Carol Tamminga, Editors
Devoted to the important role of and advances in neuroimaging within psychiatry, this series of up-to-date topic-oriented reviews of current research acts as an important information resource for all clinical and laboratory workers in the field.
Cambridge Medical Reviews: Neurobiology and Psychiatry 3
1995 192 pp. 45365-8 Hardback $89.95

The Depressed Child and Adolescent
Developmental and Clinical Perspectives
Ian M. Goodyer, Editor
Examines the nature and characteristics of depression in children and adolescents including the historical development of the concept.
Cambridge Monographs on Child and Adolescent Psychiatry 1
1995 378 pp. 43326-6 Hardback $79.95

Schizotypal Personality
Adrian Raine, Todd Lencz, and Sarnoff A. Mednick, Editors
Explores the categorical and dimensional approaches to the understanding of schizotypal disorder, and its relationship to schizophrenia, and reviews methodological issues.
1995 c.300 pp. 45422-0 Hardback $89.95

Available in bookstores or from

Instructions for Contributors

Alins and Stope

JINS encourages scholarly contributions broadly reflecting the interests of all areas of neuropsychology. Coverage will include, but is not limited to, topics in adult neuropsychology, child neuropsychology, developmental neuropsychology, disorders of speech and language, and the interfaces of neuropsychology with other areas such as behavioral neurology, neuropsychiatry, neuromaging and electro-physiology. Book Reviews will also be published.

Neuropsychological topics include theoretical considerations such as the development of cognitive processes, and brain-behavior relationships. Submissions are also encouraged that employ neuropsychological methods as either independent or outcome variables to illuminate the processes of various neurological, medical, and psychiatric disorders. The focus of the work may be primarily experimental, more applied or clinical. The key requirements are that it be original, creative, and of high quality.

To assure maximum flexibility and to promote diverse mechanisms of scholarly communication, it is intended to offer at least the following formats in addition to regular research articles: Rapid Communications which should be brief and are intended for "fast-breaking" new work which does not yet justify a full length article; Case Studies that report interesting individual cases; Critical Reviews which should be thoughtful considerations of topics of importance to neuropsychologists; Updates intended to provide an educational exposition of cognitive fields, e.g., functional brain imaging, neuropsychodiagnosis, ethical issues, etc; Symposia consisting of several research articles on a thematically linked area; Dialogue publishing arguments in a point-counterpoint form with two or more authors taking different positions on controversial issues in neuropsychology; and Letters to The Editor which should briefly report on observations or respond to recent articles in JINS.

Critical Reviews, Updates, Symposia and Dialogues may be invited by the Department Editor responsible, or may be proposed by authors. Such proposals should be discussed with the Editor-in-Chief or the appropriate Department Editor before submission.

Originality and Copyright

To be considered for publication in JINS, a manuscript cannot have been published previously, nor can it be under review for publication elsewhere. Papers with multiple authors are reviewed with the assumption that all authors have approved the submitted manuscript and concur with its submission to JINS. A Copyright Transfer Agreement, with certain specified rights reserved by the author, must be signed and returned to the Editor by senior authors of accepted manuscripts, prior to publication. This is necessary for the wide distribution of research findings, and the protection of both author and the society under copyright law.

Manuscript Submission and Review

An original and four complete copies including figures and illustrations should be sent to:

Igor Grant, MD
Editor-in-Chief: JINS
Department of Psychiatry
Clinical Sciences Building, Room 249
University of California, San Diego
9500 Gilman Drive
La Jolla, CA 92093-0680

Phone: (619) 534-4306
Fax: (619) 532-4118
E-mail: jins@uclsd.edu

In a cover letter, the author should indicate the category under which a manuscript is submitted and should identify the corresponding author including phone number, fax number and electronic mail address (if available).

The Editor-in-Chief will acknowledge receipt of the manuscript, provide it with a manuscript reference number, and assign it for review to an Associate or Department Editor and at least two other reviewers. Every effort will be made to provide the author with a review within 10 weeks of manuscript assignment. Rapid Communications and Letters to the Editor will be reviewed within 6 weeks. If the Editor requests that revisions be made to a manuscript before publication, a maximum of 4 months will be allowed for preparation of the revision, except in unusual circumstances.

Manuscript Length

Regular Research Articles — maximum of 5,000 words and a 200 word abstract (approximately 20 double-spaced manuscript pages, not including references and tables) but exceptions will be considered for unusually large or complex studies. Rapid Communications — maximum 2,500 words and a 150 word abstract, approximately 10 double-spaced manuscript pages, with a maximum of two tables and/or two figures. Rapid Communications should list no more than 20 references. Case Studies — for interesting cases, maximum 2,500 words with an informative literature review and an abstract not exceeding 150 words. Letters to The Editor — maximum 500 words with up to five references, one table or one figure.

Manuscript Preparation and Style

The entire manuscript should be typed double-spaced throughout on 8-½” × 11” or A4 paper. Unless otherwise specified, the guidelines for preparation of manuscripts is the Publication Manual of the American Psychological Association (4th edition). This may be ordered from: APA Order Dept., 750 1st St. NE, Washington DC 20002-4242, USA.

Pages should be numbered sequentially beginning with the Title Page. The Title Page should contain the full title of the manuscript, the full names and affiliations of all authors, a contact address with telephone and fax numbers, acknowledgments and support, and the name and address for requests for reprints. At the top right provide also a running headline (shortened title) of up to forty-five characters preceded by the author’s last name. Example: Smith-Implicit Memory in Parkinson’s. This running headline should be repeated at the top right of every following page.

The Abstract and Keywords Page (page 2) should include a brief statement of the problem, the method, the key findings, and the conclusions. For Case Studies there should be a brief summary of the case and its relevance to the existing literature. A list of three or four key words or terms should also be included.

The full text of the manuscript should begin on page 3. For scientific articles, including regular Research Articles and Rapid Communications, the format would include an Introduction, Method, Results, and Discussion. This should be followed by References, Tables, Figures, and Figure Legends printed on a separate sheet.

The use of abbreviations, except those that are widely used, is strongly discouraged. They should be used only if they contribute to better comprehension of the manuscript. Acronyms should be spelled out at first mention. Metric system (SI) units should be used.

Figures

High quality laser-printed copies or photocopies are acceptable. Figures should be numbered consecutively as they appear in the text. Mark each figure with the first author’s name, the figure number and the orientation on the reverse of the originals and copies. Any indication of features of special interest should also be included. Figures should be drawn or composed on computer to about twice their intended final size and authors should do their best to construct figures with notation and data points of sufficient size to permit legible photoreduction to one column of a two-column format. A guide, no character should be smaller than 1 mm wide following reduction.

Color figures can be accepted. However, the extra costs of printing these figures must be paid by the author.

References

References should be in American Psychological Association style (see Manuscript Preparation and Style above).

Text references should be cited as follows: "The findings duplicated the results of an earlier study (Brown & Greene 1991)," or "The method used was an enhancement of Bell and Tower’s (1973) and Jones et al.’s (1977). . . ." If multiple works by Jones et al. (1977) are cited, use a, b, c, in the order these appear in the text. Multiple references should be cited alphabetically: "Previous studies (Adams et al., 1980; Davies and Engler, 1985; Watson, 1987) . . . ." References cited in the text with three or more authors should state et al. at even first mention. Reference entries should be alphabetically listed in the reference section with all authors being cited. Examples of the APA reference style are as follows:

Scientific Article:

Book:

Chapter in Book:

Report at a Scientific Meeting:

Manual, Diagnostic Scheme, etc.:

Manuscript Disk

When a manuscript has been accepted for publication, the authors are requested to submit a disk version of their manuscript along with two hard copies. The disk should be labeled with the manuscript number, the author’s name and the original word-processing file. It should be noted that the disk file will be considered the final version of the manuscript.

Proofs

The publisher reserves the right to copyedit manuscripts. The corresponding author will receive page proofs for final proofreading. These should be checked and returned within 2 days of receipt. The publisher reserves the right to charge authors for excessive correction of nontypographical errors.

Offprints

The corresponding author will receive 25 free offprints. Additional offprints must be ordered when page proofs are returned. Price lists and order forms will be sent with page proofs.
RESEARCH ARTICLES
511 Executive Function in Children with Tourette Syndrome and/or Attention Deficit Hyperactivity Disorder

517 A Longitudinal Study of Reading Ability in Patients Suffering from Dementia
L. Paque and E.K. Warrington

525 Frontal Lobe Damage Produces Episodic Memory Impairment
M.A. Wheeler, D.T. Stuss, and E. Tulving

537 Performance on the Tower of London Test after Severe Head Injury
J. Cockburn

545 Cognitive Flexibility and Complex Integration in Parkinson's Disease, Huntington's Disease, and Schizophrenia
K.R. Hanes, D.G. Andrewes, and C. Pantelis

554 Right Hemisphere Mediation of Verbal Learning and Memory in Acquired Right Hemisphere Speech Dominant Patients

561 Comparison of Figural Intrusion Errors in Three Amnesic Subgroups
J.S. Kixmiller, M. Verfaellie, K.A. Chase, and L.S. Cermak

568 Semantic Relations and Alzheimer's Disease: An Early and Disproportionate Deficit in Functional Knowledge
M.K. Johnson and A.M. Herrmann

575 Delayed Recognition Memory Span in HIV-1 Infection

581 Relationship Between Psychiatric Disease and Neuropsychological Impairment in HIV Seropositive Individuals
B.C. Bix, G. Glosser, W. Holmes, C. Ballas, M. Meritz, C. Hutelmyer, and J. Turner

CASE STUDY
589 Developmental Disturbance of Access to Biographical Information and People's Names: A Single-Case Study
M. Van der Linden, S. Brédart, and M. Schweich
