

INFORMATION FOR AUTHORS

The Bulletin of the Australian Mathematical Society aims at quick publication of original research in all branches of mathematics. The Editors receive more than three times as much material as can be published in the BULLETIN; many meritorious papers can, therefore, not be accepted. Authors are asked to avoid, as far as possible the use of mathematical symbols in the title. Manuscripts are accepted for review with the understanding that the same work is not concurrently submitted elsewhere.

To ensure speedy publication, editorial decisions on acceptance or otherwise are taken quickly, normally within a month of receipt of the paper. Papers are accepted only after a careful evaluation by the Editor and an Associate Editor or other expert in the field. As even minor revisions are generally not permitted, authors should read carefully all the details listed below. For a paper to be acceptable for publication, not only should it contain new and interesting results but also

- (i) the exposition should be clear and attractive;
- (ii) the manuscript should be in publishable form, without revision.

Authors should submit three clean, high quality copies to

The Editorial Office, Bulletin of the Australian Mathematical Society,
Department of Mathematics, The University of Queensland,
Queensland 4072, Australia.

Unless requested at the time, material submitted to the BULLETIN will usually not be returned.

EDITORIAL POLICY

1. References. Arrange references alphabetically (by surname of the first author) and cite them numerically in the text. Ensure the accuracy of the references: authors' names should appear as in the work quoted. Include in the list of references only those works cited, and avoid citing works which are "in preparation" or "submitted". Where the work cited is not readily accessible (for example, a preprint) a photocopy of the title page and relevant sections of the copy that you have used should be included with your submission.

2. Abstracts.

1. Each paper must include an abstract of not more than 200 words, which should contain a brief but informative summary of the contents of the paper, but no inessential details.
2. The abstract should be self-contained, but may refer to the title.
3. Specific references (by number) to a section, proposition, equation or bibliographical item should be avoided.

3. Subject Classification. Authors should include in their papers one or more classification numbers, following the 1991 Mathematics Subject Classification. Details of this scheme can be found in each Annual Index of Mathematical Reviews.

4. Abstracts of Ph.D. Theses. The Bulletin endeavours to publish abstracts of all accepted Australasian Ph.D. theses in mathematics. One restriction, however, is that the abstract must be received by the Editor within 6 months of the degree being approved.

5. Electronic Manuscripts. The Bulletin is produced using \LaTeX . Authors who are able to do so are invited to prepare their manuscripts using \TeX . (We accept Plain \TeX , \LaTeX or \LaTeX .) Hard copy only should be submitted for assessment, but if the paper is accepted the author will be asked to send the text on an IBM PC compatible diskette or via e-mail to ams@maths.uq.edu.au. [Typed manuscripts are, of course, still acceptable.]

Bulletin of the Australian Mathematical Society

Average normalisations of elliptic curves	
William D. Banks and Igor E. Shparlinski	353
Smoothing spline in a convex closed set of Hilbert space	
Natasha Dicheva	359
1-perfect codes in Sierpiński graphs	
Sandi Klavžar, Uroš Milutinović and Ciril Petr	369
On boundedness of the weighted Bergman projections on the Lipschitz spaces	
Hong Rae Cho and Jinkee Lee	385
Chapman-Jouguet detonation profile for a qualitative model	
Abdolrahman Razani	393
Asymptotical smoothness and its applications	
Wiesława Kaczor and Stanisław Prus	405
Most finitely generated subgroups of infinite unitriangular matrices are free	
Waldemar Hołubowski	419
On totally paranormal operators	
Christoph Schmoeger	425
Local well posedness for strongly damped wave equations with critical nonlinearities	
Alexandre N. Carvalho and Jan W. Cholewa	443
From surfaces in the 5-sphere to 3-manifolds in complex projective 3-space	
J. Bolton, C. Scharlach and L. Vrancken	465
Derivations, local derivations and atomic Boolean subspace lattices	
Pengtong Li and Jipu Ma	477
C^*-algebras of infinite real rank	
A. Chigogidze and V. Valov	487
There are no denting points in the unit ball of $\mathcal{P}(^2H)$	
Sung Guen Kim	497
Asymptotical well behaviour for constrained minimisation problems	
D. Aussel and C.C. Chou	499
Existence conditions for a class of modular subgroups of genus zero	
Joachim Hempel	517

ABSTRACTS OF AUSTRALASIAN Ph.D. THESES

Risk factors associated with renal disease in diabetes mellitus	
Yee Hung Choy	527
